Adoption

This standard was first adopted by the Third Session of the Interim Commission on Phytosanitary Measures in April 2001 as *Guidelines for phytosanitary certificates*. The first revision of the standard was adopted by the Sixth Session of the Commission on Phytosanitary Measures in March 2011 as the present standard. The revised Appendix 1 was adopted by the Ninth Session of the Commission on Phytosanitary Measures in April 2014.

INTRODUCTION

Scope

This standard provides the requirements and guidelines for the preparation as issuance of phytosanitary certificates¹ (phytosanitary certificates for export and phytosanitary certificates for reexport).

Specific guidance on requirements and components of a phytor attary certification system to be established by national plant protection organizations (NPPOs) provide in ISPN (*Phytosanitary certification system*).

References

IPPC. International Plant Protection Convention. Rome P. C. FAO.

The present standard also refers to other Internation. Standards for Phytosanitary Measures (ISPMs). ISPMs are available on the IPP at http://www.ipy.int/cap-activities/standards-setting/ispms.

Definitions

Definitions of phytosanitary terms us in this candard can be found in ISPM 5 (Glossary of phytosanitary terms).

Outline of requirer ents

Phytosanitary certification is used to attest that consignments meet phytosanitary import requirements and is undertaken by an applicable and applicable and

A phytospitary process of resport is usually issued by the NPPO of the country where the plants, plant produced regulated articles were grown or processed. A phytosanitary certificate for re-export is issued by the IPPO of the country of re-export (a country where the commodity has not been grown or processed) when the consignment has not been subjected to the risk of infestation and complies with the phytosanitary import requirements of the importing country, and the original phytosanitary certificate or a certified copy is available.

NPPOs shall use the model phytosanitary certificates of the IPPC.

Where the required phytosanitary information exceeds the space available on the phytosanitary certificates, an attachment may be added with this information.

_

¹ The IPPC refers to a "phytosanitary certificate" for export purposes and a "phytosanitary certificate for reexport" for re-export purposes. In order to keep the use of these terms simple and clear in this standard "phytosanitary certificate for export" and "phytosanitary certificate for re-export" are used. The term "phytosanitary certificates" (plural) is used to cover both types of certificate.

Phytosanitary certificates should accompany the consignment or may be transmitted by mail or other means, or where agreed between countries, NPPOs may use electronic phytosanitary certificates, using standardized language, structure of the message and exchange protocols.

Phytosanitary certificates may have a limited duration of validity. The NPPO of the exporting country or the importing country may make relevant stipulations.

Specific procedures should be followed in the case of replacement phytosanitary certificates, certified copies of phytosanitary certificates, and alterations to phytosanitary certificates. Invalid or fraudulent phytosanitary certificates should not be accepted.

Special consideration is given to situations of re-export, particularly when the issuance of a phytosanitary certificate for export is not required by the country of re-export and when specific phytosanitary measures need to be conducted in the country of origin.

BACKGROUND

Phytosanitary certification is used to attest that consignments meet phytosanitary import requirements and is applied to most plants, plant products and other regulated articles that are traded internationally. Phytosanitary certification contributes to the protection of plants, including cultivated and uncultivated/unmanaged plants and wild flora (including aquatic plants), habitats and ecosystems in the importing countries. Phytosanitary certification also facilitates international trade in plants, plant products and other regulated articles by providing an internationally agreed document and related procedures.

Article V.2(a) of the IPPC stipulates how phytosanitary certificates should be issued:

Inspection and other related activities leading to issuance of phytosanitary certificates shall be carried out only by or under the authority of the official national plant protection organization. The process of phytosanitary certificates shall be carried out by public officers who are technically calified an only authorized by the official national plant protection organization to act on its behalf and under its color of with such knowledge and information available to those officers that the authorizes of importing contracting parties may accept the phytosanitary certificates with confidence an appendix adocument.

[See also ISPM 7]

This was clarified at the FAO Conference in 1997 during a wision of the IPPC: "It is understood that ... 'public officers who are technic d and aly authorized by the dional plant protection national plant protection organization' include office from th organization". "Public" in this context means emplo level of government, not by a private company. "Include officers from the national plant prote on" means that the officer may organiza be directly employed by the NPPO, but does a ectly employed by the NPPO. be

The IPPC also states requirements for the unit of model partosantary certificates (in Article V.3):

Each contracting party undertakes not to in uire consignments of plants or plant products or other regulated articles imported into its term ries to accompany a by phytosanitary certificates inconsistent with the models set out in the Annex to this Company and requirements for additional declarations shall be limited to those technically justifiant.

REQUIREMENTS OR PHYTOSAN TARY CERTIFICATION

1. Phytosapitary difficate

1.1 Pursose of hytosal ary certificates

Phytosania ve difficates he issued to attest that plants, plant products or other regulated articles meet the phytosania ve import requirements of importing countries and are in conformity with the certifying statement. Phytosanitary certificates may also be issued to support re-export certification to other countries. Phytosanitary certificates should be issued only for these purposes.

1.2 Types and forms of phytosanitary certificates

In the Annex to the IPPC, there are two types of certificates: a "phytosanitary certificate" (see Annex 1 of this standard) for export purposes and a "phytosanitary certificate for re-export" (see Annex 2 of this standard) for re-export purposes².

A phytosanitary certificate for export is usually issued by the NPPO of the country of origin. A phytosanitary certificate for export describes the consignment and, through a certifying statement, additional declarations and treatment records, declares that the consignment meets phytosanitary

² See Scope, footnote 1, concerning terminology.

import requirements. A phytosanitary certificate for export may also be issued in certain re-export situations for plants, plant products and other regulated articles originating in countries other than the country of re-export if <u>compliance with the phytosanitary import requirements</u> can be attested by the country of re-export (e.g. by inspection).

A phytosanitary certificate for re-export may be issued by the NPPO of the re-exporting country in the case where the commodity in the consignment was not grown or processed to change its nature in that country and only where an original phytosanitary certificate for export or a certified copy is available. The phytosanitary certificate for re-export provides the link to a phytosanitary certificate issued in a country of export and takes into account any changes in phytosanitary status that may have occurred in the country of re-export.

Procedures for managing the issuance of the two types of phytosanitary certificates and the systems that ensure their legitimacy are the same.

According to Article V.2(b) of the IPPC, the IPPC model phytosa es provide certifi standardized wording that shall be followed for the preparation of phyti aitary certi cates. The standardization of the phytosanitary certificates is necessary to ensur that th recognized, and that essential information is reported. NPPOs are single format for their phytosanitary certificates for export and a single form for ph rtificates for resanitary export and to place a sample of the phytosanitary ca tific ormat the International Phytosanitary Portal (IPP) (https://www.ippc.int) in a manne that pre

Phytosanitary certificates can be in paper form or, where it accepted by the NPPO of the importing country, in electronic form.

Electronic phytosanitary certificates are valent of the wording and data of phytosanitary certificates in paper for including ertifying statement, transmitted by the m the NPPO authenticated and secure electronic means of the exporting country to the NPPO of the importing country. Electronic phytos. ertification does not constitute text processing or other itar electronic generation of paper forms distributed non-electronically. Nor is it the transfer of an electronic version of the pa er certificate (e.g. through e-mail).

NPPOs should apply safe hards against favification of paper phytosanitary certificates, for example special papers, waterpacks or special papers. When electronic certification is used, appropriate safeguards should also be applied.

Phytosanitary certificate are not valid until all requirements have been met and they are dated, signed and stamped team mark for a impleted electronically by the NPPO of the exporting or re-exporting country.

1.3 Attachents to phytosanitary certificates

If the informatic required to complete phytosanitary certificates exceeds the available space on the form, an attachment may be added. The information in the attachment should only include what is required on the phytosanitary certificates. All pages of attachments should bear the number of the phytosanitary certificates and should be dated, signed and stamped in the same manner as required for the phytosanitary certificates. Phytosanitary certificates should refer to any attachments in the appropriate section. If an attachment has more than one page, the pages should be numbered and the number of pages indicated on the phytosanitary certificates. Other documents such as the Convention on International Trade in Endangered Species (CITES) certificates may accompany the consignment along with the phytosanitary certificate, but such documents should not be considered attachments to the phytosanitary certificates nor should they be referenced on the phytosanitary certificate.

1.4 Electronic phytosanitary certificates

Electronic phytosanitary certificates may be issued where accepted by the NPPO of the importing country.

When using electronic phytosanitary certificates NPPOs should develop systems that generate certificates using standardized language, message structure and exchange protocols. Appendix 1 provides guidance on standardized language, message structure and exchange protocols.

Electronic phytosanitary certificates may be used subject to the following provisions:

- The mode of issue, transmission and level of security is acceptable to the NPPO of the importing country and if relevant to NPPOs of other countries involved.
- The information provided is consistent with the IPPC model phytosanitary certificates.
- The purpose of phytosanitary certification under the IPPC is realized.
- The identity of the issuing NPPO can be adequately established and a menticated.

1.5 Mode of transmission

Phytosanitary certificates should accompany the consignment for which they we been issued. Phytosanitary certificates may also be transmitted separately by held or oner means if accepted by the NPPO of the importing country. In the case of electronic phytosactory certificates, they should be directly available to the relevant NPPO officials. In all cases, phytosactory certificates should be available to the NPPO of the importing country upon the consignment's aboval.

1.6 Duration of validity

The phytosanitary security of consignments hay be lost fer is cance of phytosanitary certificates and therefore the NPPO of the exporting or re-tporting courty may decide to restrict the duration of the validity of phytosanitary certificates after is tance and prior to export.

The NPPO of the exporting or re-export may assess the situation and define an appropriate g count period of validity before e ort occur taking into account the likelihood of the consignment becoming infested or cont export or re-export. Such likelihood may be affected by minau packaging (sealed carte or loose pack. and storage environment (open air or enclosed), type of e of year and type of pests. A phytosanitary certificate for export may commodity and conv ance, ti still be used after the peri for issuing a phytosanitary certificate for re-export, provided that the subjecte to the risk of infestation and that the commodity still achieves the consignment ha phytosanita of the importing country. requi

NPPOs Simport acceptries may also stipulate as part of the phytosanitary import requirements the duration for all chiphytosanitary certificates remain valid.

2. Actions Taken with Issued Phytosanitary Certificates

2.1 Certified copies of phytosanitary certificates

A certified copy is a copy of the original of the phytosanitary certificate that is validated (stamped, dated and countersigned) by the NPPO indicating it is a true representative copy of the original phytosanitary certificate. It may be issued upon request by the exporter. It does not replace the original. Such copies are used primarily for re-export purposes.

2.2 Replacement of phytosanitary certificates

Phytosanitary certificates may be replaced at the request of an exporter for a consignment for which a phytosanitary certificate has already been issued. This should be done only in exceptional circumstances (e.g. damage to the phytosanitary certificates issued; change of addresses, country of destination or points of entry; missing or incorrect information) and should be carried out by the NPPO of the country that issued the phytosanitary certificates being replaced.

In all cases, the issuing NPPO should request exporters to return the original phytosanitary certificates and any certified copies that have already been issued for the consignments.

Other requirements concerning replacement of phytosanitary certificates include:

- Phytosanitary certificates returned for replacement should be retained by the NPPO of the issuing country and be cancelled. The new phytosanitary certificates should have the same number as the certificate being replaced. The number of the original conficate should not be reused.
- When previously issued phytosanitary certificates cannot be retained an have left the care and control of the NPPO (for example because they are lost or is another county). The NPPO may decide that it is appropriate to issue a replacement certificate. The will phytosanitary certificate should not have the same number as the phytosanitary tertinate sing replaced but should refer to it by including an additional declaration stating that "This pertificate replaces and cancels phytosanitary certificate no. [insert number] issued or insert date."

2.3 Alterations to phytosanitary certificates

Alterations should be avoided as they may create thereto by about the validity of phytosanitary certificates. However, if alterations are accessary, they should be made only on the original phytosanitary certificates by the issuing NI O. Alteration should be minimal and should be stamped, dated and countersigned by the issuing NPP

3. Considerations for Appeting Jountries and NPPOs Issuing Phytosanitary Certificates

NPPOs of importing cuntries hay require phytosanitary certificates for regulated articles only. These are usually plants at plants roducts but may include articles such as empty containers, vehicles and organisms other than plants where restosanitary measures are technically justified.

NPPOs of the importing courses should not require phytosanitary certificates for plant products that have been process at to the point where they have no potential for introducing regulated pests, or for other articles at do not require phytosanitary measures (see IPPC Article VI.2 and ISPM 32 (Categorization of commodities according to their pest risk)).

NPPOs should consult bilaterally when there are differences between their views regarding the technical justification for requiring phytosanitary certificates. Requirements for phytosanitary certificates should respect the principles of transparency, non-discrimination, necessity and technical justification (see ISPM 1:2006).

3.1 Unacceptable phytosanitary certificates

NPPOs of importing countries should not accept phytosanitary certificates that they determine to be invalid or fraudulent. The NPPO of the declared country of issuance should be notified as soon as possible regarding unacceptable or suspect phytosanitary certificates as described in ISPM 13:2001. Where the NPPO of the importing country suspects that phytosanitary certificates may be unacceptable, it may require the prompt cooperation of the NPPO of the exporting or re-exporting country in determining the validity or non-validity of the phytosanitary certificates. The NPPO of the

exporting or re-exporting country should take corrective action where necessary and review systems for the issuance of phytosanitary certificates so as to ensure that a high level of confidence is associated with its phytosanitary certificates.

3.1.1 Invalid phytosanitary certificates

Phytosanitary certificates are invalid if, for example, they have or they are:

- incomplete or incorrect information
- false or misleading information
- conflicting or inconsistent information
- wording or information that is inconsistent with the model phytosanitary certificates
- information added by unauthorized persons
- unauthorized (not stamped, dated or countersigned) alterations or deletions
- an expired period of validity unless used as a certified copy for re-exact
- illegible (e.g. badly written, damaged)
- non-certified copies
- transmitted through a mode of transfer unauthorized by the NPPO for electronic phytosanitary certificates)
- phytosanitary certification of plants, plant products and other regular articles prohibited for import.

These are also reasons for rejecting phytosanitary certific or for requesting additional information.

3.1.2 Fraudulent phytosanitary certificates

Fraudulent phytosanitary certificates typically include the

- issued on non-authorized forms
- not dated, stamped, marked or searcd, and signed by the issuing NPPO
- issued by persons who a set authorized public officers.

Fraudulent phytosanitary certificates are alid. The NPPO issuing phytosanitary certificates should have safeguards against the falsification. In the case of electronic phytosanitary certification, safeguards against the fical in are an element of the electronic certification mechanism. The NPPO of the exporting cereatry should take of fective action when notified of a non-compliance.

3.2 Ir fort regirements for the preparation and issuance of phytosanitary certificates

Importing control in the frequently specify import requirements that should be observed with respect to the preparation and issuance of phytosanitary certificates. Examples of what an importing country may require include:

- that phytosanitary certificates be completed in a specific language or one of its listed languages (however, countries are encouraged to accept one of the official languages of FAO, preferably English)
- the period of time allowed for issuance after inspection or treatment and the period of time between the issuance of phytosanitary certificates and the dispatch of the consignment from the exporting country
- that phytosanitary certificates be completed by typing or if handwritten, be in legible capital letters (where the language allows it)
- the units of measurement to be used in the description of the consignment and for other declared quantities.

4. Specific Considerations for the Preparation and Issuance of Phytosanitary Certificates

Phytosanitary certificates shall only be issued by public officers who are technically qualified and duly authorized by the NPPO.

Phytosanitary certificates should only be issued if it is confirmed that the phytosanitary import requirements are met.

Phytosanitary certificates should contain the necessary information to clearly identify the consignment to which each relates.

To facilitate cross-referencing between phytosanitary certificates and documents no related to phytosanitary certification (e.g. letters of credit, bills of lading aTES conficates notes may accompany phytosanitary certificates that associate them with the identification de, symbol or numbers of the relevant documents that require cross-references. Such notes should be used only when necessary and should not be considered part of phytost litary to ficates.

All sections of the phytosanitary certificates should be concluded. When the entry is made, the term "None" should be entered or the line should be blood of the line drawn through the section to prevent unauthorized additions.

For re-export of consignments specific in country of origin may be necessary; mation n ti however, this may not be available on a p tosanitary V tificate for export (e.g. lack of the specific a phytosani information for the additional declaration ry certificate for export, or a phytosanitary of re-export). In such cases, if the specific certificate for export itself is not requ ed b he count phytosanitary import requirements can ain the country of re-export, no phytosanitary t be h certificate for re-export may basissued. H vever, the following may apply:

- Where the phytosapilary certificate for export is required by the country of re-export, on request by exporters, the NPPO of the country of origin may provide additional phytosanitary information (e.g., the results of a growing season inspection) to that required by the country of re-export. Such information may be necessary for the issuance of phytosanitary certificates for re-export. This is a mation could be placed in the additional declaration section, under the subhectaing additional of cial phytosanitary information" (see section 5).
- We fee a photosanitary certificate for export is not required by the country of re-export, on required from an apporter, the NPPO of the country of origin may nevertheless issue a phytosattary certificate for export. This would be for consignments intended for re-export to other countries in order to provide additional phytosanitary information necessary for the issuance of mytosanitary certificates for re-export.

In both cases above, the country of re-export should ensure that the identity of the consignment is maintained and that it has not been subjected to the risk of infestation.

Phytosanitary certificates should be issued before dispatch; however, they may also be issued after dispatch of a consignment provided that:

- the phytosanitary security of the consignment has been assured, and
- the NPPO of the exporting country has undertaken sampling, inspection and treatments necessary to satisfy phytosanitary import requirements before dispatch of the consignment.

If these criteria are not met, phytosanitary certificates should not be issued.

In the case where phytosanitary certificates are issued after dispatch, the inspection date should be indicated in the additional declaration section if required by the importing country.

5. Guidelines and Requirements for Completing Sections of a Phytosanitary Certificate for Export

Information on completing the sections of the phytosanitary certificate for export is provided as follows:

[Headings in bold refer to the sections of the model certificate, see model in Annex 1]
No
Each phytosanitary certificate for export should have a unique identification number, which allows for trace-back of consignments, facilitates audits and serves for record-keeping.
Plant Protection Organization of
The name of the country issuing the phytosanitary certificate for expert should be lister here along with the name of the NPPO.
TO: Plant Protection Organization(s) of
The name of the importing country should be listed here. There are asit country and the importing country have specific phytosanitary requirements that include the need for aphytosanitary certificate for export, the names of both countries should be listed at the transity antry should be indicated. Care should be taken to ensure that the phytosanitary type are met and appropriately indicated. In cases where the care gnment is imported and then re-exported to another country, the names of both countries may be inserted, provided the phytosanitary import requirements of both countries have been not.
Name and address of exporter:
This information identifies the social of the consignment to facilitate its trace-back and audit by the NPPO of the exporting country. The second of the exporter should be located in the exporting country. The name and address of an exporter's local agent or shipper should be used where an international company with a foreign address is the exporter.
Declared national address of consignee:
The name and address inserts after should be in sufficient detail to enable the NPPO of the importing country a confirm it is lability of the consignee and, where necessary, to be able to conduct trace-back of non-complete imports. Where the consignee is not known, "To order" may be used if the NPPO of the importing country permits the use of the term and accepts any associated risks. The importing country may require that the address of a consignee be a location in the importing country.
Number and description of packages:
The number of packages and their description should be included. Sufficient detail should be included in this section to enable the NPPO of the importing country to link the phytosanitary certificate for export with the corresponding consignment. In some cases (e.g. grain and bulk timber), shipping containers and/or railcars are considered the package and the number may be included (e.g. 10 containers). In cases of bulk shipments, the term "in bulk" may be used.
Distinguishing marks:
Distinguishing marks on packages (e.g. lot numbers, serial numbers or brand names) and conveyance identification numbers or names (e.g. container and railcar identification numbers or vessel name in the case of bulk shipments) should be included if necessary for the identification of the consignment.

Place of origin:	·
------------------	---

The place of origin refers to places where the commodity was grown or produced and where it was possibly exposed to infestation or contamination by regulated pests. In all cases, the name of the country or countries of origin should be stated. Normally a consignment gains its phytosanitary status from the place of origin. Countries may require that the name or code of the pest free area, pest free place of production or pest free production site be identified. Further details on the pest free area, pest free place of production or pest free production site may be provided in the additional declaration section.

If a commodity is repacked, stored or moved, its phytosanitary status may change over a period of time as a result of its new location through the possible infestation or contamination by regulated pests. Phytosanitary status may also be changed by processing, disinfecting or treating a commodity that results in removing possible infestation or contamination. Thus a commodity may gain its phytosanitary status from more than one place. In such cases, each covery as place, where necessary, should be declared with the initial place of origin in brackets, e.g. reclared as country *X* of export (country *Y* of origin)".

If different lots within a consignment originate in different places or countries, are ountries and places where necessary should be indicated. To assist with trace-back in such cases, the large relevant place for undertaking trace-back may be identified, for example the corting company where records are stored.

If plants were imported to or moved within a country and ave been good for a specific period of time (depending on the commodity concerned, but us ally may be considered to have changed their country or plants of origin, provided that the phytosanitary status is determined only by that country or plants or there with.

Declared means of conveyance:

This section refers to how the comm dity when leaving the certifying country. Terms transported such as "ocean vessel", "boat", "aircra "truck "rail", "mail" and "carried by hand" may be used. The ship's name and voyage num er or the arcraft's flight number may be included if known. The means of conveyance is energly a declared by the exporter. Often this will be only the first means of conveyance u issuance of the phytosanitary certificate for export. Consignments frequent move in such a that the means of conveyance can change, for example a om a ship to a truck. If the distinguishing marks identify the container that is t sferred consignment, it is su ient declare only the first means of conveyance. This is then not necessarily the means of conveyan sed whe arriving in the country of import.

Declared pint of htry:

This should be the country of arrival in the country of destination, or if not known, the country name. When the consignment transits through another country this may need to be recorded if the country of transit has phytosanitary requirements for transiting consignments. The entry point of the country of transit or if not known the country name, should be noted in brackets.

The point of entry is declared by the exporter at the time of issuance of the phytosanitary certificate for export. This point of entry may change for various reasons, and entry into the country at a place other than the declared point of entry should not normally be considered as non-compliance. However, when the NPPO of the importing country prescribes specified points of entry in its phytosanitary import requirements, then one of the specific points of entry should be declared and the consignment should enter through that point.

Name of produce and quantity declared:

This section should be sufficiently descriptive of the commodity and should include the name of the plant, plant product or other regulated article, unit and the quantity as accurately as possible to enable the NPPO of the importing country to verify the contents of the consignment. International codes may be added to facilitate identification (e.g. Customs codes) and internationally recognized units and

terms should be used (e.g. metric system). Because different phytosanitary import requirements may apply to the different intended uses (e.g. consumption as compared with propagation) or degree of processing (e.g. fresh as compared with dried), the intended use or degree of processing should be specified. Entries should not refer to trade names, sizes or other commercial terms.

Botanical name of plants: _____

The information inserted here should identify plants and plant products using accepted scientific names, at least to genus level but preferably to species level.

It may not be feasible to provide botanical names for certain regulated articles and products of complex composition such as stock feeds. In these cases, the NPPOs of the importing and exporting countries may agree on a suitable common name descriptor, or the words "Not applicable" or "N/A" should be entered.

Certifying statement

This is to certify that the plants, plant products or other regulated article described he in have been inspected and/or tested according to appropriate official produces and be considered to be free from the quarantine pests specified by the information of tracting play and to conform with the current phytosanitary requirements of the importing controlling party, including those for regulated non-quarantine pests.

They are deemed to be practically free from other pests,* *Optional ause]

In most instances specific phytosanitary import requirement exist or regular a pests are specified and the certifying statement on the phytosanitary certificate for export is use to certify conformity with these phytosanitary import requirements.

In instances where phytosanitary import regularies, are at specific, the NPPO of the exporting country may certify the general status of the consignment of any pests believed by it to be of phytosanitary concern.

NPPOs of exporting countries may include option clause on their phytosanitary certificate for export. NPPOs of importing countries cannot request mat the optional clause be added.

"Appropriate official procedures of fers to procedures carried out by the NPPO or persons authorized by the NPPO for purposes of phytosa are certification. Such procedures should be in conformity with ISPMs where a propriate. The procedures may be specified by the NPPO of the importing country taking into a country of relevant ISPMs.

"Considered to a free Non quar time pests" refers to freedom from pests in numbers or quantities that can be detected by the reaction of phytosanitary procedures. It should not be interpreted to mean about the free om in all cases but rather that quarantine pests are believed not to be present based on the procedures to their detection or elimination. It should be recognized that phytosanitary procedures have inherent uncertainty and variability, and involve some probability that pests will not be detected or siminated. This uncertainty and probability should be taken into account in the specification of appropriate procedures.

In some cases where irradiation treatments have been applied, live stages of target pests may be present in the consignment. Providing the treatment has been applied in accordance with ISPM 18:2003 and the appropriate treatment has been applied to achieve the required response, the validity of this part of the certifying statement is not compromised because the detection of live stages of the target pest is not considered as non-compliance.

"Phytosanitary requirements", as provided by the importing country, are officially prescribed conditions to be met in order to prevent the introduction and/or spread of pests. Phytosanitary import requirements should be specified in advance by the NPPO of the importing country in legislation, regulations or elsewhere (e.g. import permits and bilateral and other arrangements).

"Importing contracting party" refers to governments that have adhered to the IPPC.

II. Additional Declaration

Additional declarations provide specific additional information on a consignment in relation to regulated pests. Additional declarations should be kept to a minimum and be concise. NPPOs of the importing countries should keep under review the need for additional declarations and they should not require additional declarations with the required wording similar to that already included in the certifying statement on the phytosanitary certificate for export. The text of additional declarations may be specified in phytosanitary regulations, import permits or bilateral agreements. Treatments should not be indicated in this section but in section III of the phytosanitary certificate for export.

Additional declarations should be only those containing specific phytosanitary information required by the NPPO of the importing country or requested by the exporter for future phytosanitary certification purposes and they should not repeat information that is otherwise noted in the containing statement or in the treatment section. In cases where phytosanitary import requirements allow for several alternative measures, the NPPO of the exporting country should specify atts additional declaration which option has been applied.

Appendix 2 provides examples of text for different types of additional declars, up that are often required by NPPOs of importing countries. When NPPOs constart it necessary to equire or provide an additional declaration they are encouraged to use the standard we disc as provided in Appendix 2.

In the case where an import permit is required by the import permit number may be referred to here to assist cross-referencing.

Where a phytosanitary certificate for export is issued after the consignment's dispatch, and if required by the importing country the date of inspect in should be a ded to this section of the phytosanitary certificate for export (see also applicable conditions in station 4.

Where additional official phytosanital information is included for future phytosanitary certification purposes, such as re-export (see section such formation should be presented here. This information should be clearly separate from the additional declaration required by the importing country and should follow the ided subhading "Additional official phytosanitary information".

III. Prinfestation and/or Disinfection Treatment

Entries should be as for

Date

The date that the catment was applied to the consignment. Months should be written in full so that the month, by ad year, not confused.

Treatment

The type of treatment applied to the consignment (e.g. heat treatment, irradiation).

Chemical (active ingredient)

The active ingredient of the chemical applied in the treatment.

Duration and temperature

The duration of the treatment and temperature in the treatment.

Concentration

The concentration and dosage of the treatment applied.

Additional information

Any relevant additional information.

Treatments indicated should only be those that are acceptable to the importing country and are performed or initiated (in the case of transit) in the exporting country under supervision or authority of the NPPO of the exporting country to meet the phytosanitary import requirements.

For irradiation treatments, the provisions of ISPM 18:2003 should be considered.

Stamp of organization

The official seal, stamp or mark identifying the issuing NPPO should be included on the phytosanitary certificate for export. The NPPO of the exporting country should normally use a uniform stamp, seal or mark within a country. It should be added by the public officer upon completion of the form or may be printed on the phytosanitary certificate for export. Care should be taken to ensure that the stamp, seal or mark does not obscure essential information.

Name of authorized officer, date and signature

The name of the public officer is printed, typed, stamped or handwritten in hable upper case (capital) letters (where the language allows it). The date is also to be printed, aped, statuted or be dwritten in legible upper case (capital) letters (where the language allows it). The names down and should be written in full so that the month, day and year are not confused.

Although sections of the phytosanitary certificate for exportance and by complete in advance, the date stated should be the date of issuance. Upon request of the 1 PPO of the preacting country, the NPPO of the exporting country should be able to verify the authorized public officers. The phytosanitary certificate for export shall be ignored it is duly completed.

When electronic phytosanitary certificates ar assued, we can fication data should be authenticated by the issuing NPPO. This authentication process is equivalent to the signature of the authorized public officer and stamp, seal or mark. Auther cated electronic certification data is equivalent to the completed paper document of the phytosanitary certification for export.

Financial liability statement

The inclusion of a statement to be financial liability of the NPPO on the phytosanitary certificate for export is optional and at the discretical of the NPPO of the exporting country.

6. Considerations for Ke-Export Situations and Transit

The phytosapid certificate for reexport is the same as the phytosanitary certificate for export except for the terrory of the covering the varying statement. In the certifying statement on the phytosanitary certificate for receptor, the NPPO of the country of re-export indicates by inserting ticks in the appropriate to a whether the phytosanitary certificate for re-export is accompanied by the original phytosanitary certificate or a certified copy, whether the consignment has been repacked or not, whether the consignment are original or new, and whether an additional inspection has been done.

If the identity of plants, plant products or other regulated articles in the consignment has not been maintained or the consignment has been subjected to the risk of infestation, or the commodity has been processed to change its nature, no phytosanitary certificate for re-export should be issued. The NPPO of the country of re-export, on request by exporters, may carry out appropriate phytosanitary procedures and if the NPPO is confident that the phytosanitary import requirements are met it should issue a phytosanitary certificate for export. The place of origin should still be indicated in brackets on the phytosanitary certificate for export.

If the NPPO of the country of re-export does not require a phytosanitary certificate for the import of a commodity but the NPPO of the country of destination does, and the phytosanitary import requirements can be fulfilled by visual inspections or laboratory testing of samples, the country of re-

export may issue a phytosanitary certificate for export with the country of origin indicated in brackets in the place of origin section of the phytosanitary certificate for export.

6.1 Considerations for issuing a phytosanitary certificate for re-export

When a consignment is imported into a country, then exported to another, the NPPO of the country of re-export, on request from exporters, may issue a phytosanitary certificate for re-export (see model in Annex 2). The NPPO should issue a phytosanitary certificate for re-export only if it is confident that the phytosanitary import requirements are met. Re-export phytosanitary certification may still be performed if the consignment has been stored, split up, combined with other consignments or repackaged, provided that it has not been exposed to infestation or contamination by pests. Where consignments are combined, all the relevant parts added to these consignments must be available and meet the same phytosanitary import requirements.

Before issuing a phytosanitary certificate for re-export, the NPPO should fast exame the original phytosanitary certificate or certified copy that accompanied the constrained upon import and determine whether the requirements of the subsequent country of destination are more solingent, the same or less stringent than those certified by the phytosanitary certificate or its confied goies.

If the consignment is repacked or reloaded with its identity being affecte or if a risk of infestation or contamination is identified, additional inspection should be care aload. If the consignment is not repacked and the phytosanitary security of the consignment as been aintained, the NPPO of the reexporting country has two options regarding inspection of the consignment of re-export:

- If the phytosanitary import requirements are the same stringent, the NPPO of the reexporting country may not need to undertake an administration.
- If the phytosanitary import requirements are deferency more stringent, the NPPO of the reexporting country may undertake a additional enspection to ensure that the consignment conforms to the phytosanitary requirements of the importing country where this requirement can be met through inspection.

The country of destination may have phytosamrary import requirements (e.g. growing season inspection, soil testing) that the other beful beful by the country of re-export. In such cases, the country of re-export may still be a set to issue only osanitary certificate for export or phytosanitary certificate for re-export if:

- either particular information on compliance has been included or declared on the phytosanitary certificate for expressy the country of origin
- or an even even to protosant any measure can be applied (such as laboratory tests on samples or treatments) at is considered equivalent and in accordance with the phytosanitary import receivement of the country of destination.

Additional de arations on phytosanitary certificates for re-export where required should be based on the activities of the NPPO of the country of re-export. Additional declarations from the original phytosanitary certificate or certified copies should not be transferred to phytosanitary certificates for re-export.

When re-exports routinely occur, or are started, suitable procedures for satisfying these requirements may be agreed between the NPPOs of the countries of origin and re-export. This may include an exchange of written correspondence between the respective NPPOs on phytosanitary measures applied at origin (e.g. growing season inspection, soil testing) which provides the assurance required for the country of re-export to certify the consignment as required by the country of destination.

The original phytosanitary certificate or its certified copy should accompany the consignment together with the phytosanitary certificate for re-export.

When a phytosanitary certificate for re-export is issued, the NPPO of the re-exporting country provides assurance related to the handling (e.g. splitting, combining, packing, storage) of the consignment in the country of re-export.

If the consignment is split up and the resulting consignments are re-exported separately, then phytosanitary certificates for re-export and certified copies of the phytosanitary certificate from the country of export will be required to accompany all such consignments.

The phytosanitary certificate for re-export shall be signed only after it is duly completed.

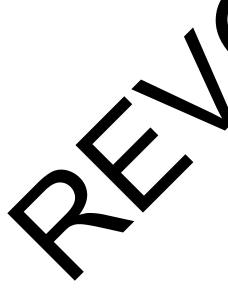

6.2 Transit

If a consignment is in transit through a country, the NPPO of the country of transit is not involved unless risks for the country of transit have been identified (ISPM 25:2006).

If the phytosanitary security of the consignment has been compromised during transit, and the NPPO of the country of transit receives a request to become involved, the NPPO is a perform proving transit receives a request to become involved, the NPPO is a perform proving transit receives a request to become involved, the NPPO is a perform proving transit receives a request to become involved, the NPPO is a perform proving transit receives a request to become involved, the NPPO is a perform proving transit receives a request to become involved, the NPPO is a perform proving transit receives a request to become involved, the NPPO is a perform proving transit receives a request to become involved.

A change of means of conveyance during transit or the transport of two or hore considered in one conveyance should not be considered a reason to issue proposed to save any certificates unless the phytosanitary security of the consignment is compromised.

Importing countries may have specific phytosanitary important requirements. g. require seals, specific packaging) addressed to the country of export for the appropriate through other countries if specific risks have been identify.

This annex is a prescriptive part of the standard.

This appendix was adopted by the Ninth Session of the Commission on Phytosanitary Measures in April 2014.

This appendix is for reference purposes only and is not a prescriptive part of the standard.

APPENDIX 1: Electronic phytosanitary certificates, information on standard XML schemes and exchange mechanisms (2014)

Introduction

Electronic phytosanitary certificates are the electronic equivalents of phytosanitary certificates in paper form and may be used if they are accepted by the national plant protection organization (NPPO) of the importing country. When electronic phytosanitary certificates are issued by the NPPO of the exporting or re-exporting country, they should be made directly available to the NPPO of the importing country.

All the requirements and procedures in this standard apply to electronic physical sanitary celesticates.

When using electronic phytosanitary certificates, NPPOs should develop a letter for the issuance, transmission and receipt of electronic phytosanitary certificates that these Extension May ap Language (XML), standardized message structure and contents, and standardized exchange provides.

This appendix provides guidance on these elements and refers to a page of the IPPC website (http://ePhyto.ippc.int) that provides links to further detail – both 1 °C are external websites and documents – on the information contained in this appendix These links referred to in the text as "Link 1", "Link 2" and so forth.

The system should include the following harp components to generate electronic phytosanitary certificates.

1. XML Message Structure

NPPOs should use the World Wide Yeb Consortium's (WC3) XML (*Link 1*) for exchange of electronic phytosanitary certification data

The phytosanitary XM message sharps is based on the United Nations Centre for Trade Facilitation and Electronic Burness (UN/CEFACT) Sanitary and Phytosanitary (SPS) XML schema (*Link* 2) and on XM data rapping, which indicates where the phytosanitary certification data should be placed in the XML schema.

The phytochitary ML data apping enables the generation of an electronic phytosanitary certificate for experimental an electronic phytosanitary certificate for re-export (*Link 4*).

2. XML Seema Contents

To facilitate automatic electronic communication and processing of phytosanitary certification data, NPPOs are encouraged to use standardized (harmonized) terms, codes and text for the data elements associated with the XML message for electronic phytosanitary certificates.

The use of free (i.e. non-standardized) text should be limited when appropriate codes are available.

For dates and country names, harmonized text is available and no free text is anticipated to be required.

For scientific names of plants and pests, consignment description, treatments, additional declarations and points of entry, extensive lists of harmonized terms, codes and text are being developed and will be available. Free text may be inserted if the appropriate term, text or value does not appear in the lists.

The process for maintaining and updating the lists of harmonized terms is being developed and will be described on the IPPC website (http://ePhyto.ippc.int). NPPOs will be requested to submit proposals for new harmonized terms using this process.

For data elements other than those above, no harmonization of terms and text is needed and therefore free text may be entered.

Further details on the information to be entered for the data elements in the XML message are provided in the following subsections.

2.1 Country names

For the names of countries (i.e. the country of origin, export, re-export, transit and destination) it is encouraged that the two-letter country codes of the International Organization for Standardization (ISO) (*Link 6*) be used.

2.2 Scientific names of plants and pests

For the scientific names of the plants in the consignment, the plant from which lants roducts were derived, and the regulated pests, the use of the database of scientific planes available on the IPPC website (http://ePhyto.ippc.int) (Link 7) is encouraged.

2.3 Description of consignment

The type of commodity and the type of packaging out to be described in the description of the consignment. It is encouraged that the commodity be described using IPPC commodity terminology (*Link 8*). It is also encouraged that the type of packaging the described using the United Nations Economic Commission for Europe (UNEC). Recommendation 1 (*Link 9*).

Other elements of the description of the configuration may include, where possible:

- weight, volume and height which ouraged to be described using UNECE Recommendation 20 (*Link 10*))
- declared means of contance which is encouraged to be described using UNECE Recommendation (Link 16)
- declared points a entry (which is encouraged to be described using the United Nations Code for Trade and Transportation Locations (UN/LOCODE) (*Link 15*)) or country name.

2.4 Tregment

It is ento raged a tree-timent types be specified using the IPPC's harmonized terms for treatment types (*Link V*. Active ingredients are encouraged to be specified using the pesticide index of the Codex Alime arius (*Link 12*). Other parameters (e.g. concentration, dosage, temperature, and duration of exposure) are encouraged to be described using UNECE Recommendation 20 (*Link 13*).

2.5 Additional declarations

Recommended standardized wording for additional declarations is provided in Appendix 2 and it is encouraged to be described using IPPC codes for additional declarations (*Link 14*). Free text may be used to supplement the additional declarations indicated on the IPPC website or to describe additional declarations that have not been standardized.

2.6 Name of authorized officer

The name of the authorized officer issuing the electronic phytosanitary certificates should be included in each types of electronic phytosanitary certificate.

3. Secure Data Exchange Mechanisms

NPPOs are responsible for the security of their national information technology (IT) system used for generating electronic phytosanitary certificates.

During transmission, the data should be encrypted to ensure that the electronic exchange of the electronic phytosanitary certification data between NPPOs is secure and authenticated. NPPOs should use a secure protocol with a minimum 128-bit encryption. Before transmission, the electronic phytosanitary certification data may be subjected to additional encryption (*Link 17*) that remains intact after transmission.

Transmission of data over the Internet from the NPPO of the exporting country to the NPPO of the importing country should be performed using secure IT mechanisms (e.g. Simple Object Access Protocol (SOAP), Secure/Multipurpose Internet Mail Extensions (S/MIME), File Transfer Protocol (FTP), Representative State Transfer (REST)) using systems that are mutually impacts.

The NPPO of the exporting country should make available to the exporter the actual electronic phytosanitary certificate number for the consignment.

Communication on the status of the message exchange between PPOs should for UN/CEFACT recommended standard messages (*Link 18*).

NPPOs are responsible for developing and maintaining neir systems for exchanging electronic phytosanitary certification data. In cases where an exchange mechanis suspended due to maintenance or unexpected system failure, the NPPO could be to other NPPOs as soon as possible.

4. Electronic Phytosanitary Certificate for Research

In paper-only systems, the original phytosalitary certific e for export or its certified copy should be available as an attachment to the phytosalitary certificate for re-export. In the situation where paper and electronic phytosanitary certificates are beginning in use the following requirements should be met.

4.1 Electronic phytosama scertificate for re-export with original phytosanitary certificate for export in electronic form

When both the phytocanitary of tificate for export and the phytosanitary certificate for re-export are in electronic form, the actronic phytosanitary certificate for export should be attached electronically to the electronic phytosanitary certificate for re-export.

4.2 Extronic hytosankary certificate for re-export with original phytosanitary certificate for me-export with original phytosanitary certificate for me-expo

When the original phytosanitary certificate for export is in paper form and the phytosanitary certificate for re-export is in ectronic form, a scan of the original phytosanitary certificate for export (in PDF or other non-editable format) should be attached to the electronic phytosanitary certificate for re-export.

4.3 Paper phytosanitary certificate for re-export with original phytosanitary certificate in electronic form

When the original phytosanitary certificate for export is in electronic form and the phytosanitary certificate for re-export is in paper form, the electronic phytosanitary certificate for export should be printed and validated by the NPPO of the country of re-export by stamping, dating and countersigning. The printed version of the electronic phytosanitary certificate for export becomes a certified copy and should then, in paper form, be attached to the phytosanitary certificate for re-export.

5. Management of Electronic Phytosanitary Certificates Issued by NPPOs

5.1 Retrieval issues

If the NPPO of the importing country is unable to retrieve the electronic phytosanitary certificates, the NPPO of the exporting country should resubmit the original electronic phytosanitary certificates at the request of the NPPO of the importing country.

5.2 Alteration and replacement

If any of the information in electronic phytosanitary certificates needs to be altered after their issuance, the original electronic phytosanitary certificates should be revoked and replacement electronic phytosanitary certificates (*Link 5*) with alterations should be issued as described in this standard.

5.3 Cancelled dispatch

If the NPPO of the exporting country becomes aware of a consignment that anot dispate a dafter the issuance of electronic phytosanitary certificates, the NPPO of the exporting country show revoke the associated electronic phytosanitary certificates.

5.4 Certified copy

Certified copies of electronic phytosanitary certificates are printouts to be electronic phytosanitary certification data that are validated (stamped, dated and untersigned) by an NPPO attesting the authenticity of the data.

The printouts should be in the format that shows a star ordized wording provided by the IPPC model phytosanitary certificates and recognized as phy sanitary certificates. However, the printouts may be XML data in XML format if accept a by the NPF of the importing country.

6. Declared Name and Address Considered

In the case of paper phytosonital, sertificans, for "Declared name and address of consignee" the term "To order" may be used "instances where e consignee is not known and the NPPO of the importing country permits use of the term.

With electronic phyto mix y certificates, the consignment information may arrive in the importing country well because the usignment arrives, which will allow pre-entry verification of the electronic phytosanity (certification of a

Instead of sing the letter" option, NPPOs are encouraged to require the electronic phytosanitary certificates a calcule the name and address of a contact person in the importing country responsible for the consignature.

This appendix is for reference purposes only and is not a prescriptive part of the standard.

APPENDIX 2: Recommended wording for additional declarations

Phytosanitary import requirements for additional declarations should preferably use the following wording. However, these are examples and are not the only statements that may be used.

1.	The consignment* was inspected and found free from (name of pest(s) or soil [to a specified]).				
2.	The consignment* was tested (method may be specified) and found free from (name o pest(s)).				
3.	The growing media in which the plants were grown was tested prior to planting and found free from (name of pest(s)).				
4.	(Name of pest(s)) is absent/not known to occur in (n. e of country rea).				
5.	The consignment* was produced in a pest free area for (name or pest(s))* area of low pest prevalence for (name of pest(s)) pest free place of production for (name of pest(s))** pest free production site for (name of pest(s))**				
6.	The place of production**/production site/ft 1^* was pected during the growing season(s)*** and found free from of f t(s)).				
7. 8.	The plants/mother plants were inspected during to last growing season(s) *** and found free from (name of pest(s)). The plants were produced <i>in vib</i> (spec by the vitro technique) and found free from				
0.	(name of pest(s)).				
9.	The plants were derived in mother plants that were tested (method may be specified) and found free from (name or plants)).				
10.	This consignant* was produced and prepared for export in accordance with (name of programme/reference to specify phytosanitary import requirement or a bilateral arrangement).				
11.	This onsign ent was reduced from plant varieties resistant to (name of pest).				
12.	Place for can be in compliance with (specify the tolerance level(s)) established by places anitary import requirements for (specify the regulated non-quarantine pest(s)).				
* Ma	by be specified if this applies only to parts thereof.				
** If	applicable add: "including a surrounding buffer zone".				
***]	Number of times/growing seasons or specific period may be added as appropriate.
