# **EXPLANATORY DOCUMENT ON ISPM 5 GLOSSARY OF PHYTOSANITARY TERMS**

*Detailed notes on terms and definitions in the Glossary*

Prepared in 2019-02, taking account of decisions until SC November 2018. Reviewed by the Technical Panel for the Glossary (TPG) 2018-12. Lead Ms Beatriz Melcho (from 2014-12), previous lead Mr Ian M. Smith (from 2006 to 2014-11)

All changes proposed modify the 2016 version (last published version). The next version should be published in 2022 and in the meantime intermediate updates are prepared each year and presented in the TPG meetings. Comments appear in square brackets.

Note: Explanatory documents for International Standards for Phytosanitary Measures (ISPMs) are produced as a result of a decision of the Interim Commission on Phytosanitary Measures (ICPM) in 2004 (reported on paragraph 111 of the report of ICPM-6). They are written to provide supporting information to the standard they refer to and cannot be taken as an official legal interpretation of the IPPC or its related documents, and are produced for public information purposes only. Each document is written by an expert, reviewed by at least two peers (in this case the TPG), then reviewed by the Standards Committee and the IPPC Secretariat. However, the material presented in explanatory documents remains the opinion of the writer and cannot be interpreted as a decision of the ICPM/CPM. It is hoped that most standards will have one or more explanatory documents associated with them.

## BACKGROUND

This annotated version of ISPM 5 (Glossary of phytosanitary terms) is presented as follows:

- A complete version of the English text of the Glossary is presented (up-to-date with amendments adopted at CPM-13 in 2018), with terms and definitions in the two columns on the left, and an additional column containing notes.
- The supplements are not included or annotated, but the Scope, purpose and outline of reference are.
- The notes in the third column may be self-explanatory, or may refer to more detailed notes 1-18, presented at the end of the table of terms and definitions.
- [Appendix 1](#) lists terms, which were included in earlier versions of the Glossary but were deleted for various reasons.
- [Appendix 2](#) lists terms, which have been considered by the Technical panel for the Glossary<sup>1</sup>, but not accepted for inclusion, as well as terms currently under consideration for new definitions.
- [Appendix 3](#) presents the history of the Glossary.

The current version of the Glossary is available on the International Phytosanitary Portal (IPP - <https://www.IPPC.int>).

All Glossary terms appear throughout in **bold**.

The introduction to the Glossary stresses that, as a general rule, the definition of a term extends to its various parts of speech and closely related words, unless these are separately defined with a special meaning (thus the definition of **inspection** extends to inspect or inspected, but not to **inspector**). The basic Glossary term is, by preference, a singular noun.

For details on the terms that are on the TPG work programme or the *List of topics for IPPC standards* for revision or deletion (including pending terms) refer to the *List of topics for IPPC standards* available publicly in languages on the IPP<sup>2</sup>. For background information on the rationale for the proposed revision or deletion, refer to the TPG work programme available in the TPG reports<sup>3</sup>.

## Scope, Purpose and Outline of Reference of ISPM 5

### *Scope*

*This reference standard is a listing of terms and definitions with specific meaning for phytosanitary systems worldwide. It has been developed to provide a harmonized internationally agreed vocabulary associated with the implementation of the International Plant Protection Convention (IPPC) and International Standards for Phytosanitary Measures (ISPMs).*

*Within the context of the IPPC and its ISPMs, all references to plants should be understood to continue to include algae and fungi, consistent with the International Code of Nomenclature for algae, fungi, and plants.*

### *Purpose*

*The purpose of this reference standard is to increase clarity and consistency in the use and understanding of terms and definitions which are used by contracting parties for official phytosanitary purposes, in phytosanitary legislation and regulations, as well as for official information exchange.*

---

<sup>1</sup> Until 2006, the drafting and revision of **ISPM 5** was done by a body known as the Glossary working group (see Appendix 3 for details). In 2006, this body was reconstituted as the Technical Panel for the Glossary (TPG). For simplicity, this latter name is used in this explanatory document in relation to all ongoing activities, whenever they started. Reference is made to the Glossary working group only for historical purposes.

<sup>2</sup> *List of topics for IPPC standards* is available at <https://www.ippc.int/publications/list-topics-ippc-standards>.

<sup>3</sup> TPG reports are available at <https://www.ippc.int/core-activities/standards-setting/expert-drafting-groups/technical-panels/technical-panel-glossary-phytosanitary-terms-ism-5>.

**Outline of Reference**

*The purpose of this standard is to assist national plant protection organizations (NPPOs) and others in information exchange and the harmonization of vocabulary used in official communications and legislation pertaining to phytosanitary measures. The present version incorporates revisions agreed as a result of the approval of the International Plant Protection Convention (1997) and terms added through the adoption of additional International Standards for Phytosanitary Measures (ISPMs).*

*The Glossary contains all terms and definitions approved until the Thirteenth Session of the Commission on Phytosanitary Measures (CPM, 2018). References in square brackets refer to the approval of the term and definition, and not to subsequent adjustments in translation.*

*As in previous editions of the Glossary, terms in definitions are printed in bold to indicate their relation to other Glossary terms and to avoid unnecessary repetition of elements described elsewhere in the Glossary. Derived forms of words that appear in the Glossary, e.g. inspected from inspection, are also considered Glossary terms.*

## ANNOTATED GLOSSARY

[Note: changes in the “definition” column relate to the amendments adopted at CPM-13 (2018) and to alignments with the current version of ISPM 5 (2018). Discrepancies in the use of capital letters were not addressed]

As some terms may have been deleted or revised, e. g. their definition changed, make sure you have the latest version of the Glossary.

TERM	DEFINITION	NOTE
<b>absorbed dose</b>	Quantity of radiating energy absorbed per unit of mass of a specified target [ISPM 18, 2003; revised CPM, 2012]	
<b>additional declaration</b>	A statement that is required by an importing country to be entered on a <b>phytosanitary certificate</b> and which provides specific additional information on a <b>consignment</b> in relation to <b>regulated pests</b> or <b>regulated articles</b> [FAO, 1990; revised ICPM, 2005; CPM, 2016]	
<b>area</b>	An <b>officially</b> defined country, part of a country or all or parts of several countries [FAO, 1990; revised FAO, 1995; CEPM, 1999, based on the World Trade Organization Agreement on the Application of Sanitary and Phytosanitary Measures (WTO, 1994)]	See <a href="#">note 1</a> . In the Glossary, the term <b>area</b> is defined to refer to an <b>officially</b> defined geographical <b>area</b> , and not to the other common uses of the word area.
<b>area endangered</b>	See <b>endangered area</b> .	This alternative order of words for the term <b>endangered area</b> corresponds to the use in the definition of <b>quarantine pest</b> .
<b>area of low pest prevalence</b>	An <b>area</b> , whether all of a country, part of a country, or all or parts of several countries, as identified by the competent authorities, in which a specific <b>pest</b> is present at low levels and which is subject to effective <b>surveillance</b> or <b>control</b> measures [IPPC, 1997; revised CPM, 2015]	See <a href="#">note 1</a> and <a href="#">note 2</a> . This term uses the word “prevalence”, which ultimately derives from the WTO/SPS Agreement. However, the Glossary does not include or define prevalence, which only applies in this specific context. See <b>incidence</b> . Note that the word “measures” in the definition is redundant.
<b>bark</b>	The layer of a <b>woody</b> trunk, branch or root outside the cambium [CPM, 2008]	See <a href="#">note 3</a> .
<b>bark-free wood</b>	<b>Wood</b> from which all <b>bark</b> , except ingrown <b>bark</b> around knots and <b>bark</b> pockets between rings of annual growth, has been removed [ISPM 15, 2002; revised CPM, 2008]	See <a href="#">note 3</a> . This term is no longer used in <b>ISPM 15</b> , but it remains in the definition of <b>debarked wood</b> .
<b>biological control agent</b>	A <b>natural enemy</b> , antagonist or competitor, or other organism, used for <b>pest control</b> [ISPM 3, 1995; revised ISPM 3, 2005]	

TERM	DEFINITION	NOTE
<b>buffer zone</b>	An <b>area</b> surrounding or adjacent to an <b>area officially</b> delimited for phytosanitary purposes in order to minimize the probability of <b>spread</b> of the target <b>pest</b> into or out of the delimited <b>area</b> , and subject to phytosanitary or other <b>control</b> measures, if appropriate [ISPM 10, 1999; revised ISPM 22, 2005; CPM, 2007]	See <a href="#">note 1</a> .
<b>bulbs and tubers</b> (as a commodity class)	Dormant underground parts of <b>plants</b> intended for <b>planting</b> (includes corms and rhizomes) [FAO, 1990; revised ICPM, 2001]	See <a href="#">note 6</a> . <i>[Ink amendment at CPM 2015. SC May 2017 added the term to the List of Topics. TPG 2017-12 recommended the deletion of this term from the Glossary to be presented to SC May 2018. SC May 2018 agreed with the proposal and sent it for first consultation. TPG 2018-12 reviewed country comments and retained its recommendation for the deletion from the Glossary]</i>
<b>chemical pressure impregnation</b>	<b>Treatment</b> of <b>wood</b> with a chemical preservative through a process of pressure in accordance with an <b>official</b> technical specification [ISPM 15, 2002; revised ICPM, 2005]	See <a href="#">note 3</a> .
<b>clearance</b> (of a consignment)	Verification of compliance with <b>phytosanitary regulations</b> [FAO, 1995]	<b>Clearance</b> is followed by <b>release</b> of the <b>consignment</b> . <i>[TPG 2018-12 asked the SC May 2019 to add the term to the work programme]</i>
<b>Commission</b>	The <b>Commission on Phytosanitary Measures</b> established under Article XI [IPPC, 1997]	See <a href="#">note 2</a> .
<b>commodity</b>	A type of <b>plant</b> , <b>plant product</b> , or other article being moved for trade or other purpose [FAO, 1990; revised ICPM, 2001]	See <a href="#">note 6</a> . <i>[TPG 2017-12 asked the SC May 2018 to add the term to the work programme with the view of revision or deletion. SC May 2018 added the term to the List of Topics. TPG 2018-12 discussed the term, suggested to retain it unchanged in the Glossary and recommended the SC to remove it from the List of Topics]</i>

TERM	DEFINITION	NOTE
<b>commodity class</b>	A category of similar <b>commodities</b> that can be considered together in <b>phytosanitary regulations</b> [FAO, 1990]	See <a href="#">note 6</a> . [Added to the List of Topics by SC November 2015. TPG 2016-12 felt that the definition for this term was not useful and considered that it might be suitable to delete it from the Glossary, but before to propose its deletion they agreed to analyse how the term had been used in standards. This analysis will be done in combination with the review of the different commodity classes included in the Glossary. SC May 2017 agreed with TPG proposal. TPG 2017-12 recommended the deletion of this term from the Glossary to be presented to SC May 2018. SC May 2018 agreed with the proposal and sent it for first consultation. TPG 2018-12 reviewed country comments and retained its recommendation for the deletion from the Glossary]
<b>commodity pest list</b>	A list of <b>pests</b> present in an <b>area</b> which may be associated with a specific <b>commodity</b> [CEPM, 1996; revised CPM, 2015]	See <a href="#">note 7</a> .
<b>compliance procedure</b> (for a <b>consignment</b> )	<b>Official</b> procedure used to verify that a <b>consignment</b> complies with <b>phytosanitary import requirements</b> or <b>phytosanitary measures</b> related to <b>transit</b> [CEPM, 1999; revised CPM, 2009]	
<b>confinement</b> (of a <b>regulated article</b> )	Application of <b>phytosanitary measures</b> to a <b>regulated article</b> to prevent the escape of <b>pests</b> [CPM, 2012]	This term is to be distinguished from <b>containment</b> , which should not be used with this meaning. [The TPG 2015-12 proposed the SC to add this term to the TPG work programme. SC May 2016 added the term to the List of Topics. TPG 2016-12 proposed its deletion from the Glossary, because there are currently three defined terms (“quarantine”, “confinement” and “detention”) covering almost the same concept. SC May 2017 approved it for first consultation. TPG 2017–12 reviewed comments from first consultation and retained its recommendation for the deletion from the Glossary. SC-7 May 2018 agreed with TPG proposal and approved the deletion of the term for the second consultation. SC November 2018 reviewed second consultation comments and approved the deletion of the term for adoption]

TERM	DEFINITION	NOTE
<b>consignment</b>	A quantity of <b>plants, plant products</b> or other articles being moved from one country to another and covered, when required, by a single <b>phytosanitary certificate</b> (a <b>consignment</b> may be composed of one or more <b>commodities</b> or <b>lots</b> ) [FAO, 1990; revised ICPM, 2001]	See <b>consignment in transit</b> and <b>re-exported consignment</b> .
<b>consignment in transit</b>	A <b>consignment</b> which passes through a country without being imported, and that may be subject to <b>phytosanitary measures</b> [FAO, 1990; revised CEPM, 1996; CEPM 1999; ICPM, 2002; ISPM 25, 2006: formerly “country of transit”]	See <a href="#">note 5</a> .
<b>containment</b>	Application of <b>phytosanitary measures</b> in and around an <b>infested area</b> to prevent <b>spread</b> of a <b>pest</b> [FAO, 1995]	See <b>control</b> (of a <b>pest</b> ) and <b>confinement</b> .
<b>contaminating pest</b>	A <b>pest</b> that is carried by a <b>commodity, packaging, conveyance</b> or container, or present in a storage place and that, in the case of <b>plants</b> and <b>plant products</b> , does not <b>infest</b> them [CEPM, 1996; revised CEPM, 1999; CPM, 2018]	
<b>contamination</b>	Presence of a <b>contaminating pest</b> or unintended presence of a <b>regulated article</b> in or on a <b>commodity, packaging, conveyance, container</b> or storage place [CEPM, 1997; revised CEPM, 1999, CPM, 2018]	See <b>contaminating pest</b> and <b>infestation</b> .
<b>control</b> (of a <b>pest</b> )	<b>Suppression, containment</b> or <b>eradication</b> of a <b>pest</b> population [FAO, 1995]	See <a href="#">note 18</a> . While <b>containment</b> and <b>eradication</b> are mainly used as <b>phytosanitary measures</b> , <b>suppression</b> corresponds to <b>pest control</b> as normally used by growers for protection of their crops. Alone, this is not usually considered sufficient as a <b>phytosanitary measure</b> , but it may be integrated with other measures in a <b>systems approach</b> . See Supplement 1 on <b>official control</b> .
<b>corrective action plan</b> (in an <b>area</b> )	Documented plan of <b>phytosanitary actions</b> to be implemented in an <b>area officially</b> delimited for phytosanitary purposes if a <b>pest</b> is detected or a <b>tolerance level</b> is exceeded or in the case of faulty implementation of <b>officially</b> established procedures [CPM, 2009]	[Ink amendment at CPM 2013]
<b>country of origin</b> (of a <b>consignment</b> of <b>plant products</b> )	Country where the <b>plants</b> from which the <b>plant products</b> are derived were grown [FAO, 1990; revised CEPM, 1996; CEPM, 1999]	See <b>country of origin</b> (below).

TERM	DEFINITION	NOTE
<b>country of origin</b> (of a <b>consignment</b> of <b>plants</b> )	Country where the <b>plants</b> were grown [FAO, 1990; revised CEPM, 1996; CEPM, 1999]	See <b>country of origin</b> (below).
<b>country of origin</b> (of <b>regulated articles</b> other than <b>plants</b> and <b>plant products</b> )	Country where the <b>regulated articles</b> were first exposed to <b>contamination</b> by <b>pests</b> [FAO, 1990; revised CEPM, 1996; CEPM, 1999]	The <b>phytosanitary certificate</b> only refers to a “place of origin”, but the relationship between place of origin and <b>country of origin</b> has not yet been properly explained. In practice, the <b>ISPMs</b> do not currently use <b>country of origin</b> in a consistent way or in accordance with the definitions for <b>country of origin</b> .
<b>cut flowers and branches</b> (as a <b>commodity class</b> )	<b>Fresh</b> parts of <b>plants</b> intended for decorative use and not for <b>planting</b> [FAO, 1990; revised ICPM, 2001]	See <a href="#">note 6</a> . [Ink amendment at CPM 2015. SC May 2017 removed the pending status of this term. TPG 2017-12 recommended the deletion of this term from the Glossary to be presented to SC May 2018; SC May 2018 agreed with the proposal and sent it for first consultation. TPG 2018-12 reviewed country comments and retained its recommendation for the deletion from the Glossary]
<b>debarked wood</b>	<b>Wood</b> that has been subjected to any process that results in the removal of <b>bark</b> . ( <b>Debarked wood</b> is not necessarily <b>bark-free wood</b> .) [CPM, 2008; formerly “debarking”]	See <a href="#">note 3</a> and <a href="#">note 5</a> .
<b>delimiting survey</b>	<b>Survey</b> conducted to establish the boundaries of an <b>area</b> considered to be <b>infested</b> by or <b>free from</b> a <b>pest</b> [FAO, 1990]	See <a href="#">note 8</a> .
<b>detection survey</b>	<b>Survey</b> conducted in an <b>area</b> to determine if <b>pests</b> are present [FAO, 1990; revised FAO, 1995]	See <a href="#">note 8</a> . [SC-7 May 2018 asked the TPG to consider whether the definition of this term should be amended, by ink amendment, to include “absence”. TPG 2018-12 discussed options and agreed revising the wording to include “to determine the presence or absence of <b>pests</b> ”. During discussion, TPG noted that including in the definition “in an <b>area, place of production or production site</b> ” would improve clarity and be consistent with the definition of <b>survey</b> . Therefore, the TPG recommended the revision of the term not as an ink amendment to be presented to the SC May 2019]
<b>detention</b>	Keeping a <b>consignment</b> in <b>official</b> custody or <b>confinement</b> , as a <b>phytosanitary measure</b> [FAO, 1990; revised FAO, 1995; CEPM, 1999; ICPM, 2005]	See <b>quarantine</b> . [Ink amendment at CPM 2018]

TERM	DEFINITION	NOTE
<b>devitalization</b>	A procedure rendering <b>plants</b> or <b>plant products</b> incapable of germination, growth or further reproduction [ICPM, 2001]	See <b>inactivation</b> (see also <a href="#">note 9</a> ).
<b>dose mapping</b>	Measurement of the <b>absorbed dose</b> distribution within a <b>process load</b> through the use of dosimeters placed at specific locations within the <b>process load</b> [ISPM 18, 2003]	This term and definition only relates to <b>ISPM 18</b> .
<b>dunnage</b>	<b>Wood packaging material</b> used to secure or support a <b>commodity</b> but which does not remain associated with the <b>commodity</b> [FAO, 1990; revised ISPM 15, 2002]	See <a href="#">note 3</a> .
<b>ecosystem</b>	A dynamic complex of <b>plant</b> , animal and micro-organism communities and their abiotic environment interacting as a functional unit [ISPM 3, 1995; revised ICPM, 2005]	Ecosystem is a common term with a wide range of meanings. It is generally used in environmental/ecological matters and is often related to the CBD issues. In the <b>IPPC</b> context this term was originally (1996) defined as individual term in relation only to biological control ( <b>ISPM 3</b> ). In 2005, the ICPM decided that the term should be made generally applicable, in relation to the extension of <b>ISPM 11</b> to <b>pests</b> primarily harmful to <b>plants</b> in the environment, and to Supplement 2 of <b>ISPM 5</b> , which explains the environmental scope of the <b>IPPC</b> . It is frequently used together with the term “ <b>habitat</b> ” when describing <b>plant</b> protection of the <b>IPPC</b> e.g. “...to the protection of <b>plants</b> , including cultivated and uncultivated/unmanaged <b>plants</b> and wild flora (including aquatic <b>plants</b> ), <b>habitats</b> and <b>ecosystems</b> in the importing countries.”
<b>efficacy (of a treatment)</b>	A defined, measurable, and reproducible effect by a prescribed <b>treatment</b> [ISPM 18, 2003]	See <b>required response</b> . See also relationship with the word “effectiveness” in <a href="#">note 9</a> .
<b>emergency action</b>	A prompt <b>phytosanitary action</b> undertaken in a new or unexpected phytosanitary situation [ICPM, 2001]	See <a href="#">note 10</a> . [TPG 2018-12 asked the SC May 2019 to add the term to the work programme]
<b>emergency measure</b>	A <b>phytosanitary measure</b> established as a matter of urgency in a new or unexpected phytosanitary situation. An <b>emergency measure</b> may or may not be a <b>provisional measure</b> [ICPM, 2001; revised ICPM, 2005]	See <a href="#">note 10</a> .

TERM	DEFINITION	NOTE
<b>endangered area</b>	An <b>area</b> where ecological factors favour the <b>establishment</b> of a <b>pest</b> whose presence in the <b>area</b> will result in economically important loss [FAO, 1995]	See <a href="#">note 1</a> and <a href="#">note 2</a> . [Ink amendment at CPM 2013]
<b>entry</b> (of a consignment)	Movement through a <b>point of entry</b> into an <b>area</b> [FAO, 1995]	The <b>consignment</b> is held at the <b>point of entry</b> until it is <b>cleared</b> and <b>released</b> . Before <b>clearance</b> and <b>release</b> , it is not considered to have <b>entered</b> the <b>area</b> .
<b>entry</b> (of a pest)	Movement of a <b>pest</b> into an <b>area</b> where it is not yet present, or present but not widely distributed and being <b>officially controlled</b> [FAO, 1995]	See <a href="#">note 11</a> . A <b>pest</b> , which has <b>entered</b> is not necessarily <b>established</b> . It may be <b>transient</b> , e.g. an <b>incursion</b> .
<b>equivalence</b> (of phytosanitary measures)	The situation where, for a specified <b>pest risk</b> , different <b>phytosanitary measures</b> achieve a contracting party's appropriate level of protection [FAO, 1995; revised CEPM, 1999, based on the World Trade Organization Agreement on the Application of Sanitary and Phytosanitary Measures (WTO, 1994); <b>ISPM 24</b> , 2005]	The definition is aligned to the language used in the WTO/SPS Agreement.
<b>eradication</b>	Application of <b>phytosanitary measures</b> to eliminate a <b>pest</b> from an <b>area</b> [FAO, 1990; revised FAO, 1995; formerly “eradicate”]	See <b>control</b> . See also <a href="#">note 5</a> .
<b>establishment</b> (of a pest)	Perpetuation, for the foreseeable future, of a <b>pest</b> within an <b>area</b> after <b>entry</b> [FAO, 1990; revised FAO, 1995; <b>IPPC</b> , 1997; formerly “established”]	See <a href="#">note 2</a> , <a href="#">note 5</a> and <a href="#">note 11</a> . See also Appendix 1 of <b>ISPM 5</b> , in relation to CBD terminology.
<b>exclusion</b> (of a pest)	Application of <b>phytosanitary measures</b> to prevent the <b>entry</b> or <b>establishment</b> of a <b>pest</b> into an <b>area</b> [CPM, 2018]	See <a href="#">note 18</a> .
<b>field</b>	A plot of land with defined boundaries within a <b>place of production</b> on which a <b>commodity</b> is grown [FAO, 1990]	See <a href="#">note 1</a> .
<b>find free</b>	To <b>inspect</b> a <b>consignment</b> , <b>field</b> or <b>place of production</b> and consider it to be <b>free from</b> a specific <b>pest</b> [FAO, 1990]	See <a href="#">note 12</a> .
<b>free from</b> (of a consignment, field or place of production)	Without <b>pests</b> (or a specific <b>pest</b> ) in numbers or quantities that can be detected by the application of <b>phytosanitary procedures</b> [FAO, 1990; revised FAO, 1995; CEPM, 1999]	See <b>practically free</b> (see also <a href="#">note 12</a> )
<b>fresh</b>	Living; not dried, deep-frozen or otherwise conserved [FAO, 1990]	See <a href="#">note 6</a> .

TERM	DEFINITION	NOTE
<b>fruits and vegetables</b> (as a commodity class)	<b>Fresh</b> parts of <b>plants</b> intended for consumption or processing and not for <b>planting</b> [FAO, 1990; revised ICPM, 2001]	See <a href="#">note 6</a> . <i>[Ink amendment at CPM 2015. SC May 2017 added the term to the List of Topics. TPG 2017-12 recommended the deletion of this term from the Glossary to be presented to SC May 2018. SC May 2018 agreed with the proposal and sent it for first consultation. TPG 2018-12 reviewed country comments and retained its recommendation for the deletion from the Glossary]</i>
<b>fumigation</b>	<b>Treatment</b> with a chemical agent that reaches the <b>commodity</b> wholly or primarily in a gaseous state [FAO, 1990; revised FAO, 1995]	See <a href="#">note 9</a> .
<b>germplasm</b>	<b>Plants</b> intended for use in breeding or conservation programmes [FAO, 1990]	See <a href="#">note 6</a> . <b>Germplasm</b> is completely included within the definition of <b>plants for planting</b> . The two terms entered the Glossary independently, and the distinction between them in practice has not been closely considered. The definition should be changed to “ <b>Plants for planting</b> intended....”.
<b>grain</b> (as a commodity class)	<b>Seeds</b> (in the botanical sense) for processing or consumption, but not for <b>planting</b> [FAO, 1990; revised ICPM, 2001; CPM, 2016]	See <a href="#">note 6</a> . Because the <b>IPPC</b> definition of <b>plant product</b> specifies “(including <b>grain</b> )”, <b>grain</b> is considered to be a <b>plant product</b> . <b>Grain</b> is also specifically mentioned in the definition of a <b>stored product</b> . <b>Grain</b> is normally shipped in bulk, with the assumption that it will be directly consumed or processed, possibly after a period of storage, under conditions, which represent a relatively low <b>pest risk</b> . Nevertheless, <b>grain</b> is, strictly speaking, also covered by the definition of <b>plants</b> <i>[Ink amendment at CPM 2015]</i> <b>Seeds</b> in the botanical sense means a propagating organ formed in the sexual reproductive cycle of <b>plants</b> . <i>[SC May 2017 added the term to the List of Topics. TPG 2017-12 proposed the revision of the term to be presented to SC May 2018. SC May 2018 agreed with the proposal and sent it for first consultation. TPG 2018-12 reviewed country comments and retained its recommendation for the revision without any change]</i>
<b>growing medium</b>	Any material in which <b>plant</b> roots are growing or intended for that purpose [FAO, 1990]	<b>Growing medium</b> may be, or contain, soil. There was long discussion on the possibility of defining “soil” for Glossary purposes, but it was concluded that the word simply had its everyday meaning.

TERM	DEFINITION	NOTE
<b>growing period</b> (of a <b>plant</b> species)	Time period of active growth during a <b>growing season</b> [ICPM, 2003]	See <a href="#">note 11</a> . [TPG 2015-12 recommended the SC to include this term in the List of Topics. SC May 2016 added the term to the List of Topics. TPG 2016-12 proposed a revision of the term. SC May 2017 approved the revision as proposed by TPG for first consultation. TPG 2017-12 reviewed country comments and recommended the SC-7 May 2018 to retain the same proposal for revision. SC-7 May 2018 agreed with TPG proposal and approved the revision of this term for the second consultation. SC Nov 2018 reviewed second consultation comments and approved the revised definition for adoption without changes]
<b>growing season</b>	Period or periods of the year when <b>plants</b> actively grow in an <b>area</b> , <b>place of production</b> or <b>production site</b> [FAO, 1990; revised ICPM, 2003]	See <a href="#">note 11</a> . [TPG 2015-12 recommended the SC to include this term in the List of Topics. SC May 2016 added the term to the List of Topics. TPG 2016-12 agreed that the term “growing season” does not have a particular meaning in the phytosanitary context and proposed the deletion of the term from the Glossary. SC May 2017 approved as proposed by TPG for first consultation. TPG 2017-12 reviewed country comments and retained its recommendation for the deletion from the Glossary. SC-7 May 2018 agreed with TPG proposal and approved the deletion of the term for the second consultation. SC November 2018 reviewed second consultation comments and approved the deletion of the term for adoption]
<b>habitat</b>	Part of an <b>ecosystem</b> with conditions in which an organism is naturally present or can <b>establish</b> [ICPM, 2005]	This term is included in the Glossary partly because <b>habitats</b> may be harmed by <b>pests</b> [Ink amendment at CPM 2015]
<b>harmonization</b>	The <b>establishment</b> , recognition and application by different countries of <b>phytosanitary measures</b> based on common <b>standards</b> [FAO, 1995; revised CEPM, 1999, based on the World Trade Organization Agreement on the Application of Sanitary and Phytosanitary Measures (WTO, 1994)]	
<b>harmonized phytosanitary measures</b>	<b>Phytosanitary measures</b> established by contracting parties to the <b>IPPC</b> , based on <b>international standards</b> [IPPC, 1997]	See <a href="#">note 2</a> .

TERM	DEFINITION	NOTE
<b>heat treatment</b>	The process in which a <b>commodity</b> is heated until it reaches a minimum temperature for a minimum period of time according to an <b>official</b> technical specification [ISPM 15, 2002; revised ICPM, 2005]	See <a href="#">note 3</a> .
<b>host pest list</b>	A list of <b>pests</b> that <b>infest</b> a <b>plant</b> species, globally or in an <b>area</b> [CEPM, 1996; revised CEPM, 1999]	See <a href="#">note 7</a> .
<b>host range</b>	Species capable, under natural conditions, of sustaining a specific <b>pest</b> or other organism [FAO, 1990; revised ISPM 3, 2005]	See <a href="#">note 7</a> . Note that the term also applies to <b>biological control agents</b> .
<b>import permit</b>	<b>Official</b> document authorizing importation of a <b>commodity</b> in accordance with specified <b>phytosanitary import requirements</b> [FAO, 1990; revised FAO, 1995; ICPM, 2005]	This term is broadly defined, to allow for example for <b>import permits</b> given for single <b>commodities</b> , for a period, or for particular exporters.
<b>inactivation</b>	Rendering micro-organisms incapable of development [ISPM 18, 2003]	See <b>devitalization</b> (see also <a href="#">note 9</a> ).
<b>incidence</b> (of a <b>pest</b> )	Proportion or number of units in which a <b>pest</b> is present in a sample, <b>consignment</b> , <b>field</b> or other defined population [CPM, 2009]	The term prevalence is sometimes wrongly used in draft ISPMs to mean “ <b>incidence</b> ”. The use of the defined term “ <b>incidence</b> ” is preferred. <i>[SC November 2018 added the term “incidence” to the TPG work programme and requested the TPG consider deleting it from the Glossary and using the dictionary definition of incidence and prevalence in ISPMs]</i>
<b>incursion</b>	An isolated population of a <b>pest</b> recently detected in an <b>area</b> , not known to be <b>established</b> , but expected to survive for the immediate future [ICPM, 2003]	See <a href="#">note 11</a> .
<b>infestation</b> (of a <b>commodity</b> )	Presence in a <b>commodity</b> of a living <b>pest</b> of the <b>plant</b> or <b>plant product</b> concerned. <b>Infestation</b> includes infection [CEPM, 1997; revised CEPM, 1999]	A <b>pest</b> of a <b>plant</b> or <b>plant product</b> is understood to be an organism, which is known to be injurious to the <b>plant</b> or <b>plant product</b> . The concept that “ <b>infestation</b> includes infection” is fundamentally linked to the <b>IPPC</b> definition of a <b>pest</b> , which does not restrict it (as some current usage does), to <b>pest</b> animals.

TERM	DEFINITION	NOTE
<b>inspection</b>	<b>Official visual examination of plants, plant products or other regulated articles</b> to determine if <b>pests</b> are present or to determine compliance with <b>phytosanitary regulations</b> [FAO, 1990; revised FAO, 1995; formerly “inspect”]	See <a href="#">note 12</a> and <a href="#">note 5</a> . [Added to the List of Topics by SC November 2015 to be reviewed together with “visual examination” and “testing”. TPG 2015-12 suggested not to revise the term. TPG 2016-12 recognized that the definition of “inspection” may be considered outdated due to advances in technology that result in visual examination not being the only method used and considered that the term should reflect current practices, for example it should include mention of olfactory or acoustic examination. Therefore, invited SC to consider if “inspection” should be revised to include examination methods other than visual and if so add the term to the List of Topics. SC May 2017 added the term to the List of Topics. TPG 2017-12 proposed the revision of the term to be presented to SC May 2018. SC May 2018 discussed the proposal and agreed to continue to consider this issue in an e-forum. SC November 2018 noted that the revised definition did not take into account the whole inspection procedures of examination of documents, verification of identity and integrity, and requested the TPG to discuss this further. TPG 2018-12 agreed to discuss it further and not to recommend the revision at the moment]
<b>inspector</b>	Person authorized by a <b>national plant protection organization</b> to discharge its functions [FAO, 1990]	See <a href="#">note 12</a> .
<b>integrity</b> (of a consignment)	Composition of a <b>consignment</b> , as described by its <b>phytosanitary certificate</b> or other <b>officially</b> acceptable document, maintained without loss, addition or substitution [CPM, 2007]	This definition carries no implication of the <b>phytosanitary action</b> , which may be appropriate in the case of loss of <b>consignment integrity</b> . In relation to “loss, addition or substitution”, addition or substitution of <b>plants</b> implies that the <b>consignment</b> now contains <b>plants</b> not covered by the <b>phytosanitary certificate</b> .
<b>intended use</b>	Declared purpose for which <b>plants, plant products</b> or other articles are imported, produced or used [ISPM 16, 2002; revised CPM, 2009]	This term should be used in preference to “end-use”.
<b>interception</b> (of a consignment)	The <b>refusal</b> or controlled <b>entry</b> of an imported <b>consignment</b> due to failure to comply with <b>phytosanitary regulations</b> [FAO, 1990; revised FAO, 1995]	See <b>interception</b> (of a pest).

TERM	DEFINITION	NOTE
<b>interception</b> (of a pest)	The detection of a <b>pest</b> during <b>inspection</b> or <b>testing</b> of an imported <b>consignment</b> [FAO, 1990; revised CEPM, 1996]	This usage is well established in <b>plant quarantine</b> . However, use of the word “ <b>interception</b> ” implies that <b>entry</b> of the <b>pest</b> is prevented. This is misleading in so far as the detection is normally based on sampling. If the <b>pest</b> is detected in one <b>consignment</b> , then there is a definite probability that it is <b>entering</b> undetected in other associated <b>consignments</b> . For this reason, some prefer to speak only of “detection”, not “ <b>interception</b> ”.
<b>intermediate quarantine</b>	<b>Quarantine</b> in a country other than the <b>country of origin</b> or destination [CEPM, 1996]	See <b>quarantine</b> . This term is not in fact used in any <b>ISPM</b> , but it is considered to remain a useful concept.
<b>International Plant Protection Convention</b>	<b>International Plant Protection Convention</b> , as deposited with FAO in Rome in 1951 and as subsequently amended [FAO, 1990]	See <a href="#">note 2</a> .
<b>International Standard for Phytosanitary Measures</b>	An <b>international standard</b> adopted by the Conference of FAO, the Interim <b>Commission on Phytosanitary Measures</b> or the <b>Commission on Phytosanitary Measures</b> , established under the <b>IPPC</b> [CEPM, 1996; revised CEPM, 1999]	
<b>international standards</b>	International <b>standards</b> established in accordance with Article X paragraphs 1 and 2 of the <b>IPPC</b> [IPPC, 1997]	See <a href="#">note 2</a> . For practical purposes, this term is replaced by <b>ISPM</b> .
<b>introduction</b> (of a pest)	The <b>entry</b> of a <b>pest</b> resulting in its <b>establishment</b> [FAO, 1990; revised FAO, 1995; <b>IPPC</b> , 1997]	See <a href="#">note 2</a> and <a href="#">note 11</a> . See also Appendix 1 of <b>ISPM 5</b> , in relation to CBD terminology.
<b>inundative release</b>	The <b>release</b> of large numbers of mass-produced <b>biological control agents</b> or beneficial organisms with the expectation of achieving a rapid effect [ISPM 3, 1995; revised <b>ISPM 3</b> , 2005]	
<b>IPPC</b>	<b>International Plant Protection Convention</b> , as deposited in 1951 with FAO in Rome and as subsequently amended [FAO, 1990; revised ICPM, 2001]	See <a href="#">note 13</a> .
<b>irradiation</b>	<b>Treatment</b> with any type of ionizing radiation [ISPM 18, 2003]	See <a href="#">note 9</a> .
<b>ISPM</b>	<b>International Standard for Phytosanitary Measures</b> [CEPM, 1996; revised ICPM, 2001]	See <a href="#">note 13</a> .

TERM	DEFINITION	NOTE
<b>living modified organism</b>	Any living organism that possesses a novel combination of genetic material obtained through the use of <b>modern biotechnology</b> [Cartagena Protocol on Biosafety to the Convention on Biological Diversity (CBD, 2000)]	
<b>LMO</b>	<b>living modified organism</b> [ISPM 11, 2004]	See <a href="#">note 13</a> .
<b>lot</b>	A number of units of a single <b>commodity</b> , identifiable by its homogeneity of composition, origin etc., forming part of a <b>consignment</b> [FAO, 1990]	
<b>mark</b>	An <b>official</b> stamp or brand, internationally recognized, applied to a <b>regulated article</b> to attest its phytosanitary status [ISPM 15, 2002]	At the present time, this only concerns <b>wood packaging</b> . [SC November 2015 asked TPG to review the term and consider deletion. TPG 2016-12 proposed its deletion from the Glossary because this term is only used in its Glossary meaning in <b>ISPM 15</b> , and the term is comprehensively and consistently described in <b>ISPM 15</b> , therefore to define it in the Glossary is not necessary. SC May 2017 approved it for first consultation. TPG 2017-12 reviewed country comments and retained its recommendation for the deletion from the Glossary. SC-7 May 2018 agreed with TPG proposal and approved the deletion of the term for the second consultation. SC November 2018 reviewed second consultation comments and approved the deletion of the term for adoption]
<b>minimum absorbed dose (Dmin)</b>	The localized minimum <b>absorbed dose</b> within the <b>process load</b> [ISPM 18, 2003]	This term and definition relate to <b>ISPM 18</b> and <b>ISPM 28</b> .
<b>modern biotechnology</b>	The application of: a. <i>in vitro</i> nucleic acid techniques, including recombinant deoxyribonucleic acid (DNA) and direct injection of nucleic acid into cells or organelles; or b. fusion of cells beyond the taxonomic family, that overcome natural physiological reproductive or recombination barriers and that are not techniques used in traditional breeding and selection [Cartagena Protocol on Biosafety to the Convention on Biological Diversity (CBD, 2000)]	The definition of this term in the Glossary is based on a CBD definition. The term is used in <b>ISPMs</b> and CPM recommendations in the specific context of <b>LMOs</b> and CBD. Therefore, the inclusion of this term and definition in the Glossary is useful because it allows limiting and better understanding its meaning in the <b>IPPC</b> context.
<b>monitoring</b>	An <b>official</b> ongoing process to verify phytosanitary situations [CEPM, 1996]	See <a href="#">note 8</a> .

TERM	DEFINITION	NOTE
<b>monitoring survey</b>	Ongoing <b>survey</b> to verify the characteristics of a <b>pest</b> population [FAO, 1995]	See <a href="#">note 8</a> .
<b>national plant protection organization</b>	<b>Official</b> service established by a government to discharge the functions specified by the <b>IPPC</b> [FAO, 1990; (formerly “plant protection organization (national)”)]	See <a href="#">note 2</a> and <a href="#">note 5</a> . Some of the functions specified by the <b>IPPC</b> concern the “contracting party” and may be carried out by an agency other than the <b>NPPO</b> , within the contracting party. It is important to make this distinction. See also Supplement 1 on <b>official control</b> .
<b>natural enemy</b>	An organism which lives at the expense of another organism in its <b>area</b> of origin and which may help to limit the population of that organism. This includes <b>parasitoids</b> , <b>parasites</b> , <b>predators</b> , phytophagous organisms and <b>pathogens</b> [ISPM 3, 1995; revised ISPM 3, 2005]	.
<b>non-quarantine pest</b>	<b>Pest</b> that is not a <b>quarantine pest</b> for an <b>area</b> [FAO, 1995]	See <a href="#">note 15</a> .
<b>NPPO</b>	<b>national plant protection organization</b> [FAO, 1990; ICPM, 2001]	See <a href="#">note 13</a> .
<b>official</b>	Established, authorized or performed by a <b>national plant protection organization</b> [FAO, 1990]	Actions performed by government services other than the <b>NPPO</b> are <b>official</b> only if the <b>NPPO</b> establishes or authorizes them. In the Glossary, many measures and actions are defined as <b>official</b> and it is not then necessary to specify this in each case.
<b>official control</b>	The active enforcement of mandatory <b>phytosanitary regulations</b> and the application of mandatory <b>phytosanitary procedures</b> with the objective of <b>eradication</b> or <b>containment</b> of <b>quarantine pests</b> or for the management of <b>regulated non-quarantine pests</b> [ICPM, 2001]	The definition does not make it clear, though Glossary Supplement 1 does, that <b>official control</b> is applied by an <b>NPPO</b> on its own territory. [Ink amendment at CPM 2013]
<b>outbreak</b>	A recently detected <b>pest</b> population, including an <b>incursion</b> , or a sudden significant increase of an established <b>pest</b> population in an <b>area</b> [FAO, 1995; revised ICPM, 2003]	See <a href="#">note 11</a> .
<b>packaging</b>	Material used in supporting, protecting or carrying a <b>commodity</b> [ISPM 20, 2004]	See <a href="#">note 6</a> . This term has been preferred to “packing”, which it is considered to include. “Packing” concerns the material, which is (temporarily) used in a particular means of transport, while <b>packaging</b> may remain with and accompany a <b>consignment</b> through all its transport.

TERM	DEFINITION	NOTE
<b>parasite</b>	An organism which lives on or in a larger organism, feeding upon it [ISPM 3, 1995]	
<b>parasitoid</b>	An insect <b>parasitic</b> only in its immature stages, killing its host in the process of its development, and free-living as an adult [ISPM 3, 1995]	
<b>pathogen</b>	Micro-organism causing disease [ISPM 3, 1995]	
<b>pathway</b>	Any means that allows the <b>entry</b> or <b>spread</b> of a <b>pest</b> [FAO, 1990; revised FAO, 1995]	
<b>pest</b>	Any species, strain or biotype of <b>plant</b> , animal or <b>pathogenic</b> agent injurious to <b>plants</b> or <b>plant products</b> . Note: In the <b>IPPC</b> , <b>plant pest</b> is sometimes used for the term <b>pest</b> [FAO, 1990; revised FAO, 1995; <b>IPPC</b> , 1997; CPM, 2012]	See <a href="#">note 7</a> and <a href="#">note 14</a> . It is stressed that the <b>IPPC</b> definition treats animals, <b>plants</b> and micro-organisms equally as <b>pests</b> , unlike some current usage. The concept of “disease”, as in “ <b>pests</b> and diseases”, is thus inappropriate, because it is the organism, which has to be regulated.
<b>pest categorization</b>	The process for determining whether a <b>pest</b> has or has not the characteristics of a <b>quarantine pest</b> or those of a <b>regulated non-quarantine pest</b> [ISPM 11, 2001]	This term is defined for the purposes of <b>PRA</b> . It is independent of the words “categorization of <b>pests</b> ”, as they appear in the text of <b>IPPC</b> Article VII/2j, whose meaning has never been clarified.
<b>pest diagnosis</b>	The process of detection and identification of a <b>pest</b> [ISPM 27, 2006]	
<b>pest free area</b>	An <b>area</b> in which a specific <b>pest</b> is absent as demonstrated by scientific evidence and in which, where appropriate, this condition is being <b>officially</b> maintained [FAO, 1995]	See <a href="#">note 1</a> . [Ink amendment at CPM 2015]
<b>pest free place of production</b>	<b>Place of production</b> in which a specific <b>pest</b> is absent as demonstrated by scientific evidence and in which, where appropriate, this condition is being <b>officially</b> maintained for a defined period [ISPM 10, 1999]	See <a href="#">note 1</a> . [Ink amendment at CPM 2015]
<b>pest free production site</b>	A <b>production site</b> in which a specific <b>pest</b> is absent as demonstrated by scientific evidence and in which, where appropriate, this condition is being <b>officially</b> maintained for a defined period [ISPM 10, 1999, revised CPM, 2015]	See <a href="#">note 1</a> .

TERM	DEFINITION	NOTE
<b>pest record</b>	A document providing information concerning the presence or absence of a specific <b>pest</b> at a particular location at a certain time, within an <b>area</b> (usually a country) under described circumstances [CEPM, 1997]	See <a href="#">note 16</a> .
<b>pest risk</b> (for <b>quarantine pests</b> )	The probability of <b>introduction</b> and <b>spread</b> of a <b>pest</b> and the magnitude of the associated potential economic consequences [ISPM 2, 2007]	See <b>pest risk analysis</b> . [Ink amendment at CPM 2013]
<b>pest risk</b> (for <b>regulated non-quarantine pests</b> )	The probability that a <b>pest</b> in <b>plants for planting</b> affects the <b>intended use</b> of those <b>plants</b> with an economically unacceptable impact [ISPM 2, 2007]	See <b>pest risk analysis</b> . [Ink amendment at CPM 2013]
<b>pest risk analysis</b> (agreed interpretation)	The process of evaluating biological or other scientific and economic evidence to determine whether an organism is a <b>pest</b> , whether it should be regulated, and the strength of any <b>phytosanitary measures</b> to be taken against it [FAO, 1995; revised IPPC, 1997; ISPM 2, 2007]	See <a href="#">note 2</a> . See also Appendix 1 of ISPM 5, in relation to CBD terminology. Originally defined just as <b>pest risk assessment</b> and <b>pest risk management</b> . This was considered insufficient, but the new definitions no longer make this simple relationship clear. The interactions of the <b>PRA</b> terms are complex and it is difficult to devise definitions that are both accurate and sufficiently explanatory.
<b>pest risk assessment</b> (for <b>quarantine pests</b> )	Evaluation of the probability of the <b>introduction</b> and <b>spread</b> of a <b>pest</b> and the magnitude of the associated potential economic consequences [FAO, 1995; revised ISPM 11, 2001; ISPM 2, 2007]	See <b>pest risk analysis</b> . [Ink amendment at CPM 2013]
<b>pest risk assessment</b> (for <b>regulated non-quarantine pests</b> )	Evaluation of the probability that a <b>pest</b> in <b>plants for planting</b> affects the <b>intended use</b> of those <b>plants</b> with an economically unacceptable impact [ICPM, 2005]	See <b>pest risk analysis</b> . [Ink amendment at CPM 2013]
<b>pest risk management</b> (for <b>quarantine pests</b> )	Evaluation and selection of options to reduce the risk of <b>introduction</b> and <b>spread</b> of a <b>pest</b> [FAO, 1995; revised ISPM 11, 2001]	See <b>pest risk analysis</b> . It is stressed that <b>pest risk management</b> forms part of the process of <b>pest risk analysis</b> , and is not the actual implementation of <b>phytosanitary measures</b> . “Pest management” may, in this case, be the appropriate term.
<b>pest risk management</b> (for <b>regulated non-quarantine pests</b> )	Evaluation and selection of options to reduce the risk that a <b>pest</b> in <b>plants for planting</b> causes an economically unacceptable impact on the <b>intended use</b> of those <b>plants</b> [ICPM, 2005;]	See <b>pest risk analysis</b> and <b>pest risk management</b> (for <b>quarantine pests</b> ). [Ink amendment at CPM 2013]

TERM	DEFINITION	NOTE
<b>pest status</b> (in an <b>area</b> )	Presence or absence, at the present time, of a <b>pest</b> in an <b>area</b> , including where appropriate its distribution, as <b>officially</b> determined using expert judgement on the basis of current and historical <b>pest records</b> and other information [CEPM, 1997; revised ICPM, 1998]	See <a href="#">note 16</a> . This term is explained in full in <b>ISPM 8</b> . It is independent of the words “pest status” as they appear in the text of <b>IPPC</b> Article VII/2j, whose exact meaning has never been clarified. The meaning probably includes <b>pest status</b> as defined here, but may also extend to the degree to which an organism is a <b>pest</b> (in other words its potential to cause injury).
<b>PFA</b>	<b>pest free area</b> [FAO, 1995; revised ICPM, 2001]	See <a href="#">note 13</a> .
<b>phytosanitary action</b>	An <b>official</b> operation, such as <b>inspection</b> , <b>testing</b> , <b>surveillance</b> or <b>treatment</b> , undertaken to implement <b>phytosanitary measures</b> [ICPM, 2001; revised ICPM, 2005]	See <b>phytosanitary procedure</b> (see also <a href="#">note 10</a> ).
<b>phytosanitary certificate</b>	An <b>official</b> paper document or its <b>official</b> electronic equivalent, consistent with the model certificates of the <b>IPPC</b> , attesting that a <b>consignment</b> meets <b>phytosanitary import requirements</b> [FAO, 1990; revised CPM, 2012]	The full term should be used to avoid confusion with other types of certificates.
<b>phytosanitary certification</b>	Use of <b>phytosanitary procedures</b> leading to the issue of a <b>phytosanitary certificate</b> [FAO, 1990]	
<b>phytosanitary import requirements</b>	Specific <b>phytosanitary measures</b> established by an importing country concerning <b>consignments</b> moving into that country [ICPM, 2005]	
<b>phytosanitary legislation</b>	Basic laws granting legal authority to a <b>national plant protection organization</b> from which <b>phytosanitary regulations</b> may be drafted [FAO, 1990; revised FAO, 1995]	This term may not need definition, except perhaps to make a clear distinction from <b>phytosanitary regulations</b> .
<b>phytosanitary measure</b> (agreed interpretation)	Any legislation, regulation or <b>official</b> procedure having the purpose to prevent the <b>introduction</b> or <b>spread</b> of <b>quarantine pests</b> , or to limit the economic impact of <b>regulated non-quarantine pests</b> [FAO, 1995; revised <b>IPPC</b> , 1997; ICPM, 2002]	The agreed interpretation of the term <b>phytosanitary measure</b> was developed to account for the relationship of <b>phytosanitary measures</b> to <b>regulated non-quarantine pests</b> . This relationship is not adequately reflected in the definition found in Article II of the <b>IPPC</b> (1997). See also <a href="#">note 15</a> and <a href="#">note 17</a> . [Ink amendment at CPM 2013]

TERM	DEFINITION	NOTE
<b>phytosanitary procedure</b>	Any <b>official</b> method for implementing <b>phytosanitary measures</b> including the performance of <b>inspections, tests, surveillance</b> or <b>treatments</b> in connection with <b>regulated pests</b> [FAO, 1990; revised FAO, 1995; CEPM, 1999; ICPM, 2001; ICPM, 2005; formerly “quarantine procedure”]	See <a href="#">note 5</a> , <a href="#">note 10</a> and <a href="#">note 17</a> .
<b>phytosanitary regulation</b>	<b>Official</b> rule to prevent the <b>introduction</b> or <b>spread</b> of <b>quarantine pests</b> , or to limit the economic impact of <b>regulated non-quarantine pests</b> , including establishment of procedures for <b>phytosanitary certification</b> [FAO, 1990; revised FAO, 1995; CEPM, 1999; ICPM, 2001]	See <a href="#">note 17</a> . <i>[Ink amendment at CPM 2013]</i>
<b>phytosanitary security</b> (of a <b>consignment</b> )	Maintenance of the <b>integrity</b> of a <b>consignment</b> and prevention of its <b>infestation</b> and <b>contamination</b> by <b>regulated pests</b> , through the application of appropriate <b>phytosanitary measures</b> [CPM, 2009]	This term is defined in relation to a <b>consignment</b> . To avoid confusion, it is preferable to use it only in this context.
<b>place of production</b>	Any premises or collection of <b>fields</b> operated as a single production or farming unit. [FAO, 1990; revised CEPM, 1999; CPM, 2015]	See <a href="#">note 1</a> .
<b>plant products</b>	Unmanufactured material of <b>plant</b> origin (including <b>grain</b> ) and those manufactured products that, by their nature or that of their processing, may create a risk for the <b>introduction</b> and <b>spread</b> of <b>pests</b> [FAO, 1990; revised IPPC, 1997; formerly “plant product”]	See <a href="#">note 2</a> , <a href="#">note 5</a> and <a href="#">note 6</a> .
<b>plant protection organization</b> (national)	See <b>national plant protection organization</b>	
<b>plant quarantine</b>	All activities designed to prevent the <b>introduction</b> or <b>spread</b> of <b>quarantine pests</b> or to ensure their <b>official control</b> [FAO, 1990; revised FAO, 1995]	See <a href="#">note 17</a> . <i>[Ink amendment at CPM 2013]</i>
<b>planting</b> (including <b>replanting</b> )	Any operation for the placing of <b>plants</b> in a <b>growing medium</b> , or by grafting or similar operations, to ensure their subsequent growth, reproduction or propagation [FAO, 1990; revised CEPM, 1999]	
<b>plants</b>	Living <b>plants</b> and parts thereof, including <b>seeds</b> and <b>germplasm</b> [FAO, 1990; revised IPPC, 1997]	See <a href="#">note 2</a> and <a href="#">note 6</a> .

TERM	DEFINITION	NOTE
<b>plants for planting</b>	<b>Plants</b> intended to remain <b>planted</b> , to be <b>planted</b> or <b>replanted</b> [FAO, 1990]	See <a href="#">note 6</a> . It may be noted that, currently, defined <b>commodity classes</b> that belong to “ <b>plants for planting</b> ” are: <b>seeds, bulbs and tubers</b> , and <b>plants in vitro</b> . <i>[This note is under revision]</i>
<b>plants in vitro</b> (as a commodity class)	<b>Plants</b> growing in an aseptic medium in a closed container [FAO, 1990; revised CEPMP, 1999; ICPM, 2002; formerly “plants in tissue culture”]	See <a href="#">note 5</a> and <a href="#">note 6</a> . <i>[Ink amendment at CPM 2015. SC May 2017 added the term to the List of Topics. TPG 2017-12 recommended the deletion of this term from the Glossary to be presented to SC May 2018. SC May 2018 agreed with the proposal and sent it for first consultation. TPG 2018-12 reviewed country comments and retained its recommendation for the deletion from the Glossary]</i>
<b>point of entry</b>	Airport, seaport, land border point or any other location <b>officially</b> designated for the importation of <b>consignments</b> , or the entrance of persons [FAO, 1995; revised CPM, 2015]	
<b>post-entry quarantine</b>	<b>Quarantine</b> applied to a <b>consignment</b> after <b>entry</b> [FAO, 1995]	See <b>quarantine</b> .
<b>PRA</b>	<b>Pest risk analysis</b> [FAO, 1995; revised ICPM, 2001]	See <a href="#">note 13</a> .
<b>PRA area</b>	<b>Area</b> in relation to which a <b>pest risk analysis</b> is conducted [FAO, 1995]	See <b>pest risk analysis</b> .
<b>practically free</b> (of a consignment, field, or place of production)	Without <b>pests</b> (or a specific <b>pest</b> ) in numbers or quantities in excess of those that can be expected to result from, and be consistent with good cultural and handling practices employed in the production and marketing of the <b>commodity</b> [FAO, 1990; revised FAO, 1995]	See “ <b>free from</b> (of a <b>consignment, field, or place of production</b> )” (see also <a href="#">note 12</a> ). <i>[Ink amendment at CPM 2017]</i>
<b>predator</b>	A <b>natural enemy</b> that preys and feeds on other animal organisms, more than one of which are killed during its lifetime [ISPM 3, 1995]	
<b>process load</b>	A volume of material with a specified loading configuration and treated as a single entity [ISPM 18, 2003]	
<b>processed wood material</b>	Products that are a composite of <b>wood</b> constructed using glue, heat and pressure, or any combination thereof [ISPM 15, 2002]	See <a href="#">note 3</a> .

TERM	DEFINITION	NOTE
<b>production site</b>	A defined part of a <b>place of production</b> , that is managed as a separate unit for phytosanitary purposes [CPM, 2015]	See <a href="#">note 1</a> .
<b>prohibition</b>	A <b>phytosanitary regulation</b> forbidding the importation or movement of specified <b>pests</b> or <b>commodities</b> [FAO, 1990; revised FAO, 1995]	
<b>provisional measure</b>	A <b>phytosanitary regulation</b> or procedure established without full <b>technical justification</b> owing to current lack of adequate information. A <b>provisional measure</b> is subjected to periodic review and full <b>technical justification</b> as soon as possible [ICPM, 2001]	See <a href="#">note 10</a> .
<b>quarantine</b>	<b>Official</b> confinement of <b>regulated articles, pests</b> or beneficial organisms for <b>inspection, testing, treatment</b> , observation or research [FAO, 1990; revised FAO, 1995; CEPF, 1999; CPM, 2018]	See <a href="#">note 17</a> . In practice, there is <b>post-entry quarantine</b> and <b>intermediate quarantine</b> . <b>Regulated articles</b> may be kept in <b>quarantine</b> not only for <b>inspection, testing</b> or <b>treatment</b> , but also for observation or research (e.g. prohibited <b>plants</b> that are used for varietal selection or breeding in a <b>quarantine station</b> )
<b>quarantine area</b>	An <b>area</b> within which a <b>quarantine pest</b> is present and is being <b>officially controlled</b> [FAO, 1990; revised FAO, 1995]	See <a href="#">note 1</a> . [SC May 2018 changed the status to active as the revision of ISPM 8 was approved for first consultation. TPG 2018-12 agreed not to recommend the revision of the term and to ask the SC to retain the term in the work program until adoption of the Revision of ISPM 8]
<b>quarantine pest</b>	A <b>pest</b> of potential economic importance to the <b>area endangered</b> thereby and not yet present there, or present but not widely distributed and being <b>officially controlled</b> [FAO, 1990; revised FAO, 1995; IPPC 1997]	See <a href="#">note 2</a> and <a href="#">note 15</a> .
<b>quarantine station</b>	<b>Official</b> station for holding <b>plants, plant products</b> or other <b>regulated articles</b> , including beneficial organisms in <b>quarantine</b> [FAO, 1990; revised FAO, 1995; CPM, 2015; formerly “quarantine station or facility”]	See <b>quarantine</b> . See also <a href="#">note 5</a> .
<b>raw wood</b>	<b>Wood</b> which has not undergone processing or <b>treatment</b> [ISPM 15, 2002]	See <a href="#">note 3</a> .

TERM	DEFINITION	NOTE
<b>re-exported consignment</b>	<b>Consignment</b> that has been imported into a country from which it is then exported. The <b>consignment</b> may be stored, split up, combined with other <b>consignments</b> or have its <b>packaging</b> changed [FAO, 1990; revised CEPM, 1996; CEPM, 1999; ICPM, 2001; ICPM, 2002; formerly “country of re-export”]	See <a href="#">note 5</a> .
<b>reference specimen</b>	Specimen, from a population of a specific organism, conserved and accessible for the purpose of identification, verification or comparison [ISPM 3, 2005; revised CPM, 2009]	
<b>refusal</b>	Forbidding <b>entry</b> of a <b>consignment</b> or other <b>regulated article</b> when it fails to comply with <b>phytosanitary regulations</b> [FAO, 1990; revised FAO, 1995]	Alternative actions are <b>treatment</b> , destruction or reconfiguration.
<b>regional plant protection organization</b>	An intergovernmental organization with the functions laid down by Article IX of the <b>IPPC</b> [FAO, 1990; revised FAO, 1995; CEPM, 1999; formerly “plant protection organization (regional)”]	See <a href="#">note 2</a> and <a href="#">note 5</a> .
<b>regional standards</b>	<b>Standards</b> established by a <b>regional plant protection organization</b> for the guidance of the members of that organization [IPPC, 1997]	See <a href="#">note 2</a> . In practice, such <b>standards</b> are more commonly referred to as “ <b>regional standards for phytosanitary measures</b> ”, on the model of ISPMs.
<b>regulated area</b>	An <b>area</b> into which, within which or from which <b>plants</b> , <b>plant products</b> and other <b>regulated articles</b> are subjected to <b>phytosanitary measures</b> [CEPM, 1996; revised CEPM, 1999; ICPM, 2001]	See <a href="#">note 1</a> . [Ink amendment at CPM 2013]
<b>regulated article</b>	Any <b>plant</b> , <b>plant product</b> , storage place, <b>packaging</b> , conveyance, container, soil and any other organism, object or material capable of harbouring or spreading <b>pests</b> , deemed to require <b>phytosanitary measures</b> , particularly where international transportation is involved [FAO, 1990; revised FAO, 1995; IPPC, 1997]	See <a href="#">note 2</a> . <b>Pests</b> , and in the general case beneficial organisms and <b>biological control agents</b> , are not included in the definition of <b>regulated article</b> .
<b>regulated non-quarantine pest</b>	A <b>non-quarantine pest</b> whose presence in <b>plants for planting</b> affects the <b>intended use</b> of those <b>plants</b> with an economically unacceptable impact and which is therefore regulated within the territory of the importing contracting party [IPPC, 1997]	See <a href="#">note 2</a> and <a href="#">note 15</a> . [Ink amendment at CPM 2013]
<b>regulated pest</b>	A <b>quarantine pest</b> or a <b>regulated non-quarantine pest</b> [IPPC, 1997]	See <a href="#">note 2</a> and <a href="#">note 15</a> .

TERM	DEFINITION	NOTE
<b>release</b> (into the environment)	Intentional liberation of an organism into the environment [ISPM 3, 1995]	Although this term first entered the Glossary from <b>ISPM 3</b> , it has a wider application (e.g. to <b>LMOs</b> ). <i>[Ink amendment at CPM 2013]</i>
<b>release</b> (of a consignment)	Authorization for <b>entry</b> after <b>clearance</b> [FAO, 1995]	
<b>replanting</b>	See <b>planting</b> .	
<b>required response</b>	A specified level of effect for a <b>treatment</b> [ISPM 18, 2003]	Although this term only appears in <b>ISPM 18</b> , it has relevance for all kinds of <b>treatment</b> , not only <b>irradiation</b> . It would belong with several other terms in the proposed <b>ISPM</b> on the evaluation of <b>efficacy</b> . The present definition may not be suitable for the more general case. See also <b>efficacy</b> (of a <b>treatment</b> ). See also <a href="#">note 9</a> .
<b>RNQP</b>	<b>Regulated non-quarantine pest</b> [ISPM 16, 2002]	See <a href="#">note 13</a> .
<b>round wood</b>	<b>Wood</b> not sawn longitudinally, carrying its natural rounded surface, with or without <b>bark</b> [FAO, 1990]	See <a href="#">note 3</a> .
<b>RPPO</b>	<b>regional plant protection organization</b> [FAO, 1990; revised ICPM, 2001]	See <a href="#">note 13</a> .
<b>sawn wood</b>	<b>Wood</b> sawn longitudinally, with or without its natural rounded surface with or without <b>bark</b> [FAO, 1990]	See <a href="#">note 3</a> .
<b>Secretary</b>	<b>Secretary</b> of the <b>Commission</b> appointed pursuant to Article XII [ <b>IPPC</b> , 1997]	See <a href="#">note 2</a> . Common usage refers to the “ <b>IPPC</b> Secretariat”
<b>seeds</b> (as a commodity class)	Seeds (in the botanical sense) for <b>planting</b> [FAO, 1990; revised ICPM, 2001; CPM, 2016]	See <a href="#">note 6</a> . <i>[Ink amendment at CPM 2015]</i> <b>Seeds</b> in a botanical sense means a propagating organ formed in the sexual reproductive cycle of <b>plants</b> . <i>[SC May 2017 added the term to the List of Topics. TPG 2017-12 proposed the revision of the term to be presented to SC May 2018. SC May 2018 agreed with the proposal and sent it for first consultation. TPG 2018-12 reviewed country comments and retained its recommendation for the revision of the term without any change.]</i>
<b>SIT</b>	<b>sterile insect technique</b> [ISPM 3, 2005]	See <a href="#">note 13</a> . This is an example of an abbreviation, which is not needed in the Glossary, though it may be useful in the <b>ISPM</b> in which it appears.

TERM	DEFINITION	NOTE
<b>spread</b> (of a <b>pest</b> )	Expansion of the geographical distribution of a <b>pest</b> within an <b>area</b> [FAO, 1995]	See <a href="#">note 11</a> .
<b>standard</b>	Document established by consensus and approved by a recognized body, that provides, for common and repeated use, rules, guidelines or characteristics for activities or their results, aimed at the achievement of the optimum degree of order in a given context [FAO, 1995; ISO/IEC Guide 2:1991 definition]	
<b>sterile insect</b>	An insect that, as a result of a specific <b>treatment</b> , is unable to reproduce [ISPM 3, 2005]	
<b>sterile insect technique</b>	Method of <b>pest control</b> using area-wide <b>inundative release</b> of <b>sterile insects</b> to reduce reproduction in a <b>field</b> population of the same species [ISPM 3, 2005]	
<b>stored product</b>	Unmanufactured <b>plant product</b> intended for consumption or processing, stored in a dried form (this includes in particular <b>grain</b> and dried <b>fruits and vegetables</b> ) [FAO, 1990]	See <a href="#">note 6</a> .
<b>suppression</b>	The application of <b>phytosanitary measures</b> in an infested <b>area</b> to reduce <b>pest</b> populations [FAO, 1995; revised CEPM, 1999]	See <b>control</b> (of a <b>pest</b> ).
<b>surveillance</b>	An <b>official</b> process which collects and records data on <b>pest</b> presence or absence by <b>survey</b> , <b>monitoring</b> or other procedures [CEPM, 1996; revised CPM, 2015]	See <a href="#">note 8</a> .

TERM	DEFINITION	NOTE
<b>survey</b>	An <b>official</b> procedure conducted over a defined period of time to determine the characteristics of a <b>pest</b> population or to determine which species are present in an <b>area</b> [FAO, 1990; revised CEPM, 1996; CPM, 2015]	See <a href="#">note 8</a> . [The term was pending on the TPG work programme, due to the ongoing revision of ISPM 6. TPG 2016-12 reviewed the term in combination with their review of terms and consistency for the draft revision of ISPM 6 and proposed a revised definition. SC May 2017 approved the revision for first consultation] [TPG 2017-12 reviewed member comments, agreed to clarify in the definition that surveys can also be conducted in a place of production or production site and recommended the revision to SC. SC-7 May 2018 agreed with TPG proposal for revision and approved it for the second consultation. SC November 2018 discussed second consultation comments, slightly modified the proposed definition and approved the revised definition for adoption]
<b>systems approach</b>	A <b>pest risk management</b> option that integrates different measures, at least two of which act independently, with cumulatively effect [ISPM 14, 2002; revised ICPM, 2005; CPM 2015]	This term was only introduced into the Glossary relatively late, when <b>ISPM 14</b> was adopted. In fact, it may be relevant to several earlier <b>ISPMs</b> e.g. <b>ISPM 10</b> , and may be introduced into them when they are revised.
<b>technically justified</b>	Justified on the basis of conclusions reached by using an appropriate <b>pest risk analysis</b> or, where applicable, another comparable examination and evaluation of available scientific information [IPPC, 1997]	See <a href="#">note 2</a> . See <b>pest risk analysis</b> .
<b>test</b>	<b>Official</b> examination of <b>plants</b> , <b>plant products</b> or other <b>regulated articles</b> , other than visual, to determine if <b>pests</b> are present, identify <b>pests</b> or determine compliance with specific phytosanitary requirements [FAO, 1990; revised CPM, 2018]	See <a href="#">note 12</a> .
<b>tolerance level (of a pest)</b>	<b>Incidence</b> of a <b>pest</b> specified as a threshold for action to <b>control</b> that <b>pest</b> or to prevent its <b>spread</b> or <b>introduction</b> [CPM, 2009]	
<b>transience</b>	Presence of a <b>pest</b> that is not expected to lead to <b>establishment</b> [ISPM 8, 1998]	See <a href="#">note 11</a> .
<b>transit</b>	See <b>consignment in transit</b>	

TERM	DEFINITION	NOTE
<b>transparency</b>	The principle of making available, at the international level, <b>phytosanitary measures</b> and their rationale [FAO, 1995; revised CEPM, 1999, based on the World Trade Organization Agreement on the Application of Sanitary and Phytosanitary Measures (WTO, 1994)]	
<b>treatment</b>	<b>Official</b> procedure for the killing, <b>inactivation</b> or removal of <b>pests</b> , or for rendering <b>pests</b> infertile or for <b>devitalization</b> [FAO, 1990, revised FAO, 1995; <b>ISPM</b> 15, 2002; <b>ISPM</b> 18, 2003; ICPM, 2005]	See <a href="#">note 9</a> . [TPG 2016-12 felt that “treatment” is both a common term and also that it was useful to have it defined in the Glossary and agreed it would be useful to analyze the term and definition further, therefore invited SC to add it to the List of Topics. SC May 2017 added the term to the List of Topics. TPG 2017-12 proposed the revision of the term to be presented to SC May 2018. SC May 2018 agreed with the proposal and sent it for first consultation. TPG 2018-12 reviewed country comments and retained its recommendation for the revision of the term without any change]
<b>treatment schedule</b>	The critical parameters of a <b>treatment</b> which need to be met to achieve the intended outcome (i.e. the killing, <b>inactivation</b> or removal of <b>pests</b> , or rendering <b>pests</b> infertile, or <b>devitalization</b> ) at a stated <b>efficacy</b> [ <b>ISPM</b> 28, 2007]	See <a href="#">note 9</a> .
<b>visual examination</b>	Examination using the unaided eye, lens, stereoscope or other optical microscope [ <b>ISPM</b> 23, 2005; revised CPM, 2018]	
<b>wood</b> (as a commodity class)	<b>Commodities</b> such as <b>round wood</b> , <b>sawn wood</b> , wood chips and <b>wood</b> residue, with or without <b>bark</b> , excluding <b>wood packaging material</b> , <b>processed wood material</b> and bamboo products [FAO, 1990; revised ICPM, 2001; CPM, 2016]	See <a href="#">note 3</a> . [Ink amendment at CPM 2015. SC May 2017 added the term to the List of Topics. TPG 2017-12 proposed the revision of the term to be presented to SC May 2018. SC May 2018 agreed with the proposal and sent it for first consultation. TPG 2018-12 reviewed country comments and retained its recommendation for the revision of the term, agreeing to exclude in the definition rattan products]
<b>wood packaging material</b>	<b>Wood</b> or <b>wood</b> products (excluding paper products) used in supporting, protecting or carrying a <b>commodity</b> (includes <b>dunnage</b> ) [ <b>ISPM</b> 15, 2002]	See <a href="#">note 3</a> . See <b>packaging</b> . <b>Wood packaging material</b> includes both material that can be made into <b>wood packaging</b> and <b>wood packaging</b> as such.

## NOTES REFERRED TO IN THE ANNOTATED GLOSSARY

### *Note 1 Areas, places of production, production sites and buffer zones*

An **area**, following the SPS agreement of the WTO, is very broadly defined. It can be several countries, a single country, parts of several countries, part of a single country. There is some division of opinion on how small an **area** can be. On the one hand, it is argued that the definition sets no lower limit, so an **area** could be as small as, for example, a single glasshouse compartment. On the other hand, it is argued that an **area** has, in the context of **phytosanitary regulations**, historically been regarded as much larger than this, often a whole province or department, a detached part (e.g. island), possibly down to the size of a commune. **ISPM 10** provides a detailed comparison, for the purposes of **pest** freedom, between what is typically considered as an **area** (in the second understanding above) and the more closely defined concept of a **place of production**. Since **ISPM 10** is adopted, it must be presumed that this interpretation is the valid one. This **ISPM** should also be consulted for the main points of difference between a **pest free area** and a **pest free place of production**. An additional point has arisen since **ISPM 10** was adopted. The producer, in a **pest free place of production**, very often relies on a **systems approach** (**ISPM 14**) to ensure and guarantee **pest** freedom. In a **pest free area**, the **NPPO** generally relies on overall **surveillance** of the **area**, without special measures for the **plants** intended for export (which are unnecessary if the **area** is **pest free**).

Smaller than **places of production**, there are **production sites** and **fields**. Both of these, like **places of production**, have phytosanitary significance when they are required to be **pest free**. The distinction between a **place of production** and a **production site** is largely an administrative one. Some producers use part of their **place of production** for export, and other parts not. These are then distinguished as **production sites**. It would also have been possible (and perhaps preferable) to label them as separate **places of production** belonging to one owner, as is done for example for the purposes of organic farming.

The Glossary also distinguishes **areas** by their **pest status**. In addition to **pest free areas** (**ISPM 4**), there are **areas of low pest prevalence** (**ISPM 22**). An **endangered area** is identified by **PRA** (**ISPM 11**); it may be smaller than the original **PRA area**, if the **pest** concerned can only **establish** or cause damage in part of that **area**. However, in order to protect the **endangered area** by **official** measures, it is usually necessary, for practical reasons<sup>4</sup>, to apply these to a larger **area**, the **regulated area**. This may in practice be the whole country, but if the **endangered area** is small by comparison with the whole country, the contracting party will have to justify this practical decision. This terminology was established at a relatively early stage in the development of the Glossary, but has remained rather theoretical. There are no recommended criteria for an **NPPO** to “determine the minimum **area** necessary for effective protection” of an **endangered area**. Under the **IPPC** and its **ISPMs** the term **endangered area** should not be interpreted as an environmentally protected **area** in the sense of ecological conservation.

An **area** may also be distinguished by the presence of a **pest**. If it is a **quarantine pest**, the decision may be taken to make it a **quarantine area**, i.e. apply **official control** within the **area**. Again, for practical reasons, this may be done over a larger **area** extending beyond the actual **pest** presence, then known as the **regulated area**, geographically including the **quarantine area**.

A **buffer zone** is an **area** surrounding a **pest free area** or a **quarantine area** in which further **official** measures are applied to reduce the probability of **pest** movement (into a **pest free area** or out of a **quarantine area**). A **buffer zone** may also surround a **pest free place of production**, or an **area of low pest prevalence**. Most often, **buffer zones** are established within a stated distance of the specified **area**, and may range from a few tens of metres to several kilometres. A **buffer zone** is an element in the practical management of a phytosanitary situation, while the **regulated area** relates to the freedom of

<sup>4</sup> The practical reasons mentioned here and in the following paragraph typically include delimitation by administrative borders (e.g. the limits of counties or communes), or by physical limits (e.g. the whole of an island).

movement of imported **commodities** within the country. A **buffer zone** may in itself also be an **area of low pest prevalence**.

Finally, the term **regulated area** can be used for any of the above **areas** which are subject to **official measures**.

## **Note 2 Terms arising directly from the IPPC**

### ***Phytosanitary measure***

There is a group of Glossary terms which are taken directly from the **IPPC**. It is clear that, if the **IPPC** has used, and defined, a term, the Glossary cannot use it for another purpose, or modify its definition. This restriction has caused a few problems, since there are inconsistencies in the **IPPC** terminology. The case which has attracted most attention is the **IPPC** definition of **phytosanitary measure**. This relates to the **introduction** and/or **spread** of any **pest**, whereas Article VI of the **IPPC** allows **phytosanitary measures** to be required only for **regulated pests**. As a result, the definition also conflicts with the use of the term in the WTO/SPS Agreement. For some years, the term **phytosanitary measure** was simply not used in Glossary definitions. However, this term occupies a very central place, and it was finally decided in 2002 to solve the problem by an “agreed interpretation” of the **IPPC** definition, which makes it apply only to **quarantine pests** and **RNQPs**. The term was then (in 2005) reinstated in a number of definitions. In principle, the expedient of an “agreed interpretation” could be used more widely, and the Technical Panel for the Glossary has envisaged some other possible cases (none accepted so far).

### ***IPPC-limited terms***

A few terms from the **IPPC** only apply within the **IPPC** text, and are not used outside it. The **IPPC** defines the **Commission**, but the body calls itself the “Commission on Phytosanitary Measures”. The **IPPC** defines the **Secretary** of the **Commission**, but common usage refers to the “**IPPC Secretariat**”. Another **IPPC** term (**harmonized phytosanitary measures**) has found very little use in practice.

### ***Key IPPC terms***

Other **IPPC** terms are of key importance in the terminology supported by the Glossary. Many of them (**establishment, pest, plant products, plants, quarantine pest, regulated article**) have been in the Glossary since its very first version, and in some cases were then aligned with the 1997 version of the **IPPC**. The definitions of all these terms were revised in the 1990s, and are now in line with those of the New Revised Text.

Other key terms came into the Glossary as a result of their inclusion in the **IPPC** in 1997 (**area of low pest prevalence, endangered area, pest risk analysis, regional standards, regulated non-quarantine pest, regulated pest, technically justified**). Only a few of the key **IPPC** terms have remained unchanged since the beginning, and these are the ones which are not so much defined by the **IPPC** as specified by it (**International Plant Protection Convention, national plant protection organization, regional plant protection organization**).

### ***Plants under the IPPC***

When the **IPPC** was developed living organisms were divided into only two kingdoms – **plants** and animals – and other organisms such as algae, bryophytes and fungi have been covered under the term **plants**. There has never been a clear definition of what is to be understood by **plants** in the **IPPC**. Originally, the emphasis was on **plants** that are exploited for economic reasons by humans and that need to be protected from **pests**. In practice, this meant angiosperms, gymnosperms and pteridophytes (broadly “higher” or “vascular **plants**”). Yet the concept of **plants** for the botanical community at that time extended to bryophytes, algae, fungi and even bacteria, indeed everything that was not animal. This was reflected in the fact that the same code of botanical nomenclature applied to all these organisms. The direct economic importance of these various other “**plants**” was not actually very great, and they did not need to be protected against the **introduction** and **spread** of **pests**. However, at that time certain

algae and fungi were exploited for economic reasons, and would presumably have qualified to be considered by the **IPPC**. Article IV/2b of the revised **IPPC** makes it clear that the **IPPC** is also concerned with **pests** affecting uncultivated/unmanaged **plants** (wild flora) and with environmental effects and their consequences on **plants**.

In the 21<sup>st</sup> century, the classification of organisms into kingdoms has greatly changed. There are not just two kingdoms, Animalia and Plantae, but at least seven (Archaea, Bacteria, Animalia, Protozoa, Chromista, Fungi, Plantae). In modern terms, fungi and many algae are not **plants**. This leads to an apparent restriction in the scope of the **IPPC**. It is clear that certain algae and certain fungi are open to protection under the **IPPC** because of their economic exploitation, while others are important components of biodiversity.

Recently the International Code of Botanical Nomenclature was renamed to the International Code of Nomenclature for algae, fungi and **plants**. The **IPPC** should state that its scope extends to algae and fungi as well as **plants**. This is reflected in the scope of the Glossary by stating that within the context of the **IPPC** and its **ISPMs** all references to **plants** should be understood to extend to algae and fungi, consistent with the International Code of Nomenclature for algae, fungi, and **plants**.

### **Note 3 Wood and bark**

The terms related to **wood** in the Glossary emphasize attributes which are of phytosanitary importance. In general, they do not coincide with distinctions made by the **wood** industry and trade. **Wood**, as broadly defined, can cover many **commodities** or articles: trunks, planks, railway sleepers, firewood, veneers, **dunnage** ... (as distinguished in particular by their Customs Codes). What is important is whether the **wood** retains its natural rounded surface (**round wood**) or not, and whether it retains **bark** (which presents the greatest **pest risk**).

Commercial “debarking” is a necessary stage for most of the practical uses of **wood**, and can be applied before export or after import. Its immediate product (**debarked wood**) very often retains some **bark**. **Debarked wood** presents a reduced **pest risk** for many **pests**, so that debarking may be an adequate **phytosanitary measure** (according to the acceptable level of risk). For many phytosanitary purposes, however, **wood** should be subjected to a more thorough process of removal of **bark**, by which all accessible **bark** is removed, giving **bark-free wood**. Even in this case, however, the **wood** may retain some material which would usually be referred to as “**bark**” (ingrown **bark** and **bark** pockets), and which lies relatively deeply in the body of the **wood** so that it is impossible to remove it.

It may be noted that, in earlier versions of the Glossary, “**bark**” was not defined, being considered as having its common language meaning. The terms and definitions have now been rearranged to refer, not to processes, but to materials: **bark**, **bark-free wood** and **debarked wood**. In 2009, CPM-4 removed reference to **bark-free wood** from ISPM 15, which now only makes a requirement for **debarked wood**. However, the concept of **bark-free wood** remains, and appears negatively in the definition of **debarked wood**: **debarked wood** is not necessarily **bark-free wood**. This implies that **debarked wood** which retains “vascular cambium, ingrown **bark** around knots, or **bark** pockets between rings of annual growth” can be accepted. Conversely, it is not recommended to require **bark-free wood** (which is a quite impractical requirement).

A distinction is also made, on account of **pest risk**, between **raw wood**, **processed wood material**, and **wood** treated in various ways (**heat treatment**, kiln drying, **chemical pressure impregnation**).

Note 4 [deleted]

### **Note 5 Annotations within the Glossary and the annotated Glossary**

*Substitution of new terms and definitions.* In some cases, a term or its definition was substituted by a related term, which could more easily be defined. This is indicated by “formerly” in the definition.

**Note 6 Commodities** [*This whole note is open to revision*]

From its very earliest versions, the Glossary has included terms for commodities of **plants** and **plant products** grouped by **pest risk** rather than by commercial criteria. These are called **commodity classes**. Most importantly, these classes distinguish between the high-risk categories **plants for planting** and **seeds** and various lower-risk categories (**cut flowers and branches, fruits and vegetables**). They also distinguish between the **IPPC** terms **plants** and **plant products** (including the specific cases of **grain, wood** and **stored products**). More detailed terms within these classes are not included, since these would make unnecessary distinctions between **commodities** which present a very similar **pest risk**. Of course, terminology may be needed to make such distinctions for other purposes (e.g. between woody **plants** and herbaceous **plants**, or between grafted **plants** and cuttings), but the Glossary does not have to provide it. Besides, certain commercial terms (like “Nursery stock”) are not used consistently around the world, e.g. for woody **plants** only, for **plants** with roots only.

The term **plants for planting** depends on the definition of **planting**, which may ensure “subsequent growth, reproduction or propagation”. It has two subsidiary terms: **bulbs and tubers** and **seeds**. It is very important to stress that **seeds** are considered to be **plants for planting**. This has formed part of **FAO** terminology for many years, even before the Glossary was devised. There is, unfortunately, no good term for **plants for planting** other than **bulbs and tubers** or **seeds**. This leads to the kinds of formulae which are now found in **phytosanitary regulations**, e.g. **plants for planting** except **seeds**. One particular category has more recently been distinguished – **plants in vitro**. It should be noted that **plants for planting** includes not only **plants** “intended to be **planted**” but also **plants** “intended to remain **planted**” and **plants** “intended to be **replanted**”. Thus, any rooted **plant** in a container (pot **plant**) is covered, even if its commercial purpose is only to be discarded after use. In practice, it is difficult to distinguish the **pest risk** of these **plants** and devise different requirements for them.

At one time, the Glossary did not include the term **germplasm**, which was considered to be completely covered by the term **plants for planting**. However, in 1996, this term was added to the New Revised Text of the **IPPC**, and accordingly to the Glossary. Strictly, to fit into its correct place in the Glossary, the definition should read “**plants for planting** intended for use in breeding or conservation programmes”, not just “**plants** intended ...” This **commodity class** can be considered to present a higher **pest risk** than other “**plants for planting**”, since it may originate relatively recently from wild **plants**, and information on its phytosanitary status may be limited in quantity, and based on a relatively short period of observation.

Descriptive or delimiting elements, such as “as a **commodity class**” belong to the term and not to the definition, because this allows to better express what the defined terms cover, and makes it possible to use the terms in other contexts without delimiting elements, e.g. in their botanical sense.

**Note 7 Pests and hosts**

The Glossary does not define “host”, which is considered to be a common place biological word. It is important for phytosanitary purposes to know which **pests** infest a given host **plant**, or which host **plants** a **pest** can infest. The corresponding terms are, respectively, **host pest list** and **host range**. The definition of **host range** was extended, on account of **ISPM 3**, to cover the hosts of **biological control agents**. This is not wholly satisfactory, since the two terms no longer match (the truly equivalent term would be a **pest host list**) and the word “host” does not correspond to all the relationships that **biological control agents** have with their targets (many are “prey” rather than hosts; **antagonists** do not have hosts). These terms could usefully be reviewed. The term **host pest list** is also matched by another term, **commodity pest list**. This distinction has been made because all **commodities** derived from a given host, and entering international trade, are not necessarily likely to carry a given **pest**. **Phytosanitary import requirements** should be applied to **commodities**, not to hosts.

## Note 8 Surveillance

**Surveillance** is the most general term for the collection of **pest**-related information by **NPPOs**. It is necessarily **official**. **Monitoring** is general in aim and sustained in time, while **surveys** are directed at specific targets for a limited time. **ISPM 6** makes a distinction between “general **surveillance**” and “specific **surveillance**”. Specific **surveillance** is achieved through one or more of the three kinds of **surveys** defined in the Glossary: **detection survey**, **delimiting survey** and **monitoring survey**. There is some overlap in this terminology (e.g. **monitoring survey** and **monitoring**).

## Note 9 Treatment

The Glossary contains terms which refer to the effect of **treatment** (**inactivation**, **devitalization**), and others which refer to the active agent of the **treatment** (**irradiation**, **fumigation**, **heat treatment**, **chemical pressure impregnation**). The scope is fairly limited at present, but could be extended as **ISPMs** are developed for other types of **treatment**.

At present only **treatment schedule**, **efficacy** (of a **treatment**) and **required response** are included. **Efficacy** is a special concept linked to **treatments**, and the terms “**efficacy**” and “**efficacious**” should be used only in this context. In this sense, the term “**efficacy** (of a **treatment**)” is correctly defined in the Glossary. In other cases, the term “**effectiveness**” and its derived form “**effective**” may be used e.g. an “**effective measure**”, “**effectiveness of measures**”. The general accepted understanding is that **efficacy** refers to results under controlled conditions, whereas **effectiveness** refers to results in practice under natural conditions.

## Note 10 Actions and measures

A **phytosanitary measure** is defined as “any legislation, regulation or **official** procedure ...”, and a **phytosanitary procedure** is defined as a “...method for implementing **phytosanitary measures** ...”. Thus, a **phytosanitary measure** is something which is set out (“**established**”), and not an action as such. Unfortunately, in everyday language, a measure can be an action as such. The Technical Panel for the Glossary decided that there was a need to make a distinction between measures and actions, and so created the term **phytosanitary action**, defined as “...an operation ...to be undertaken ...”. Thus, the **treatment** or **refusal** of a particular **consignment** are “**actions**”, while the regulation or procedure which lays down that certain non-complying **consignments** should be **treated** or **refused** is a measure.

The point is significant in particular because the WTO/SPS Agreement is concerned only with measures, in the above sense. It is measures, not actions, which have to be notified, commented or modified.

The problem arises particularly in emergency situations. The **NPPOs** of importing countries have the authority to take **emergency action** if they encounter a new or unexpected phytosanitary situation (if the situation is already covered by existing measures, immediate action may be needed, but it is not **emergency action**). They have to notify this to the exporting country as in **ISPM 13**, but not to the WTO Secretariat under Annex 2 of the SPS Agreement. The latter only applies to changes in **phytosanitary measures**, or new **regulations**. If, however, **emergency actions** are followed by **emergency measures**, then these have to be notified to WTO.

There is a further complication, owing to the term **provisional measure**. This is also derived from the WTO/SPS Agreement. What characterizes a **provisional measure** is not so much that it is applied in an emergency situation, but that it is applied on account of a risk which has not been **technically justified**. An **emergency measure** may or may not be a **provisional measure**. If it is applied in relation to a risk which can be **technically justified** immediately (for example, the discovery that a new **commodity** can serve as a **pathway** for a **quarantine pest**), it is not a **provisional measure**. If it is applied to a newly detected **pest** of unknown importance, then it is a **provisional measure**. **Provisional measures** are of course “subject to full **technical justification** as soon as possible” (and it is the importing country which has to provide this).

### **Note 11 Presence and movement of pests**

The Glossary contains a family of terms concerning where **pests** are present, and how long they remain there.

**Plant quarantine** is principally concerned with **pests** which present a risk of **entering** an **area** and of **establishing** there. The Glossary defines **introduction** (of a **pest**) as the process of **entry** followed by **establishment**. It is important to have a clear understanding of this definition, because it conflicts with another use of the term introduction, that is “movement by human agency”, whether intentional or unintentional. This is not necessarily associated with **establishment**. **Introduction** in the sense of the Glossary can be by any agency, not necessarily human. Certain activities closely related to **plant quarantine** use the other meaning of introduction, especially biological **control** (by introduction of non-indigenous **biological control agents**) and the protection of biodiversity. Also, the CBD terminology (Appendix 1 of ISPM 5) is based on these alternative meanings. It is unfortunate that this discrepancy exists, but it is imposed by the **IPPC**, which regularly refers to preventing the “**introduction** and **spread**” of **pests**, and uses the same definition of **introduction** as the Glossary.

The most important question concerning the presence of a **pest** in an **area** (for phytosanitary purposes) is whether it is considered permanent or temporary. In principle, a **pest** which is present in an **area** can possibly be **eradicated** (though this is unusual, **eradication** normally being attempted only for **transient pests**). The term **transience** is used for the presence of a **pest** which is not expected to **establish**, either because conditions are not suitable for it or because measures can readily be applied to destroy it (**eradication**). These distinctions are set out in more detail in ISPM 8. The **transient** presence of a **pest** often takes the form of an **incursion**, i.e. presence of the **pest** is localized and recent. An **incursion** can only be described as such for a limited period; it either disappears (spontaneously or as a result of **eradication**) or remains beyond the “immediate future” of the definition, in which case it becomes a presence.

The possibility of **transience** depends on the biology of the **pest**, and particularly its interaction with host **plants** and climate. If there is a period when growing host **plants** are not available or the climate is very unsuitable for **pest** survival, **establishment** becomes much less probable. In temperate regions, it is possible to define a **growing season**, to be distinguished from the winter which the **pest** has somehow to survive. In tropical or semitropical regions, or for **pests** of glasshouse crops, it is only possible to define the **growing period** on a crop-by-crop basis.

The term **spread** (much used in the **IPPC**; cf. above) is understood in relation to an **area**. It can be used, according to context, at any geographical scale, from **areas** within a country to intercontinental **spread**. **Introduction** is not **spread**, insofar as a given **area** is concerned.

Finally, this family of terms also includes **outbreak**. The necessity for this term arises from its use in **IPPC** Article VIII/1a, which concerns **pest** reporting. In that article, it is distinguished from occurrence and **spread**. It has been interpreted that **outbreak** can refer either to **incursion** or to an unusual increase in the population of an **established pest**.

### **Note 12 Inspection and pest freedom**

The Glossary distinguishes between **inspection**, defined as **visual examination**, and **testing**. **Inspection** is by definition **official**, and done by an **inspector**. **Visual examination** is defined to include the use of a lens or microscope, as well as the unaided eye. **Inspection** and **testing** are defined in a very general context, and are not restricted to imported **consignments** at the **point of entry**. They also apply to work undertaken during **surveillance**, etc.

The words **find free** constitute a Glossary term in relation to **inspection**, so it is not necessary to specify “**inspected** and **found free**”. If **testing** is needed, then it will be necessary to specify “**tested** and **found free**”. **Free from** is defined in relation to the application of **phytosanitary procedures**, so its meaning in any particular case will depend on what the procedures specify. There is no universal quantified

concept of what is meant by **free from**. In any case, “**free from**” always has to be followed by the indication of the **pests** concerned.

The term “**pest-free**”, as in “to make a **consignment pest-free**”, does not appear in the Glossary. Its use is discouraged, since it may be used without reference to the **pests** concerned; it is not clear whether it means **free from** one stated **pest**, **free from** several **pests**, or **free from** all **pests**. The term “**pest freedom**” faces the same problem but is used in ISPMs. It should relate to an **area**, **place of production**, or **production site**, since these are the objects which the Glossary allows to be **pest free**.

**Practically free** is a term which had more importance in relation to the pre-1997 text of the IPPC, in which the declaration of the model **phytosanitary certificate** included the words “**practically free from other pests**”. Countries are not, indeed, obliged to use this statement on the **phytosanitary certificate (ISPM 12)** because it has become optional since the revision of the Text of the IPPC in 1997. The “good cultural and handling practices employed in the production and marketing of a **commodity**” to which the definition refers are presumably those required for the same or an equivalent **commodity** produced and marketed within the exporting country. The use of this statement has been justified as a general “good practice” **phytosanitary measure**, reducing the risk of **introduction** of **pests** presenting an unspecified risk. At the time when it was a required part of the **phytosanitary certificate**, many countries had not established lists of **regulated pests**. A further justification was that **commodities** produced without good cultural and handling practices are considered more likely to be **infested** by **quarantine pests**, and more difficult to **inspect** for **quarantine pests**.

### Note 13 *Abbreviations*

A few Glossary terms are so widely used in ISPMs or in other documents relating to the work of the **Commission** that it is useful to include their well-known abbreviations in the Glossary (e.g. IPPC, NPPO, PRA). However, the present set of abbreviations is considered sufficient and it is not intended to add further abbreviations of this kind to the Glossary. In general, the use of other abbreviations is not considered to add clarity to ISPMs, and their introduction is discouraged. Exceptionally, if a complex term is repeatedly used within an ISPM, it may be appropriate to use an abbreviation within the text of the ISPM concerned.

It should also be noted that abbreviations may pose problems when transposed into other FAO languages. Abbreviations that are convenient in one language do not necessarily transpose easily into other languages.

### Note 14 *Organisms and pests*

The Glossary does not define “organism”, allowing the word to have the flexibility of common language. The definition of **pest** (which goes back to the 1980s) does not refer to organisms, but rather to “**plants, animals and pathogenic agents**”. Presumably, fungi, bacteria, viruses and other virus-like agents can simply be covered by “**pathogenic agents**”. Besides, many biologists consider that viruses and other virus-like agents are not organisms.

In any case, there is an underlying confusion, insofar as an organism may be a single individual of a species (hence the problem with **sterile insects**), or a whole taxon (without reference to whether given individuals are alive or dead, sterile or not). The definition of a **pest** avoids this by specifically referring to taxa (species, strains or biotypes). Organisms (including **biological control agents**, LMOs) may enter the PRA process in ISPM 2, which then has to determine whether the organism is a **pest**.

### Note 15 *Terminology relating to pests and their categorization*

IPPC Article II contains three essential terms for the categorization of **pests**: **quarantine pest**, **regulated non-quarantine pest** and **regulated pest**. The first is inherited from the previous text of the IPPC, adjusted by the Glossary group. The second (RNQP) is a concept invented during the revision of the IPPC. Originally (before 1997), neither of these terms was understood to mean that the **pests** concerned were necessarily regulated with respect to international trade in **plants** and **plant products**.

A **quarantine pest** was considered to satisfy the conditions for being so regulated, but still remained actually to be regulated. As was said at the time, a **quarantine pest** was a “regulatable” **pest**. Similarly, an **RNQP** satisfied the conditions for being regulated internationally, one of which is to be “regulated within the territory of the importing contracting party”.

In any case, the New Revised Text of the **IPPC** pre-empted all these ideas by creating in its Article VI the concept of a **regulated pest**, and defining it as being only **quarantine pests** and **RNQPs**. This implies, but does not explicitly make clear, that **quarantine pests** and **RNQPs** are regulated (in contrast to the previous understanding, cf. above). However, the **IPPC** does not clarify what is meant by regulation. Article VI specifies that “contracting parties may require **phytosanitary measures** for **quarantine pests** and **RNQPs**”, but may not do so for “non-regulated **pests**” (not defined).

It is stressed that the definitions of **phytosanitary regulations** and **phytosanitary measures** are restricted by the Glossary to **quarantine pests** and **RNQPs**. Countries may also take measures against **pests** that are present but not categorized as **quarantine pests** or **RNQPs**, for example in the case of “plague” **pests** like locusts. These can also be referred to as **official measures**, but are not **phytosanitary measures**. A suggestion was made that all such national measures could be called “domestic measures”, but finally the description “**official measures**” was considered sufficient.

### **Note 16 Pest recording and reporting**

It is important for information about presence of **pests** to be validated and communicated. **ISPM 8** (on **pest status**) and **ISPM 17** (on **pest reporting**) cover this topic. The two should be clearly distinguished. A **pest record** concerns a particular place at a particular time. It has to be properly and accurately documented. **Pest records** are essential components of the information used to establish the status of a **pest** in an **area**, and should thus be preserved in a permanent archive (i.e. be retained for an unlimited period). **Pest status** form the basis of regulations or requirements and concerns, not a single place, but an **area** of concern (usually a country), and is based on the compilation of information from different places and times. This information generally includes **pest records**, but could also include biological information (e.g. experimental evidence that a **pest** cannot survive the conditions in a given **area**). One or a few **pest records** in an **area** do not justify the conclusion that the **pest** is present in the **area**; this has to be based on a properly conducted evaluation of **pest status**.

### **Note 17 Plant quarantine**

It is important to distinguish **quarantine** from **plant quarantine**. **Quarantine**, which is usually applied in a **quarantine station**, has the classical meaning of “holding back in isolation until found to be safe”, used in earlier centuries for international travellers. **Plant quarantine** is a comprehensive term covering most activities under the **IPPC**. The word “**quarantine**” has also been used in some countries to mean a **phytosanitary regulation**; this usage is not accepted in the Glossary.

The Technical Panel for the Glossary has explored the possibility of making a clear distinction between **plant quarantine**, **plant health** and **plant protection**. Since the **IPPC** is eponymously concerned with **plant protection**, there really should be a clear understanding of what that is, and how it relates to **plant quarantine**. In international relations, it would also be easier if the national bodies known as “**plant protection services**”, “**plant health authorities**”, “**plant quarantine inspectorates**” and the like, had well understood common functions. However, no agreement has been reached. It is not even agreed whether these terms overlap in meaning, or fall in a hierarchy, or in the latter case what is the order of the hierarchy. The situation is further complicated by the need for the distinctions to be valid in different languages, when in fact the use of the terms differs by country. The word “phytosanitary” presents the same problem. At one time, the Glossary gave it the meaning “pertaining to **plant quarantine**”, but this could not be upheld in different languages. For example, the word “phytosanitaire” in French is broader than “**plant quarantine**”, and French does not have a word equivalent to the Spanish “cuarentenario”. So “phytosanitary” remains in compound terms such as **phytosanitary measures**, **phytosanitary regulations** and **phytosanitary procedures**, but is not defined as such.

### **Note 18 *Control***

The Glossary subdivides **control** into **suppression, containment, eradication** and **exclusion**, which thus form a family of related terms.

## Appendix 1 - List of old terms, no longer included in the Glossary

The Technical Panel for the Glossary has sought to maintain trace-back throughout its operations. This should ensure that new proposals for addition or modification of terms or definitions are made and considered in the light of previous work.

Old term	Reason for deletion
<b>antagonist</b>	Deleted by CPM-7 (2012): Term no longer used in <b>ISPMs</b> .
<b>authority</b>	Deleted by CPM-3 (2008), since the text of <b>ISPM 3</b> already referred to “the <b>NPPO</b> or responsible authority”, so that there was no need to provide a special definition in the Glossary.
<b>beneficial organism</b>	Deleted by CPM-5 (2010). The term is considered to have its normal meaning and not to require definition in the Glossary.
<b>biocontrol</b>	Included (until 2004) as a synonym of biological <b>control</b> .
<b>biological control</b>	Deleted by CPM-3 (2008), since it is adequately defined within the term <b>biological control agent</b> .
<b>biological pesticide (biopesticide)</b>	Deleted by CPM-3 (2008), since the term and definition in <b>ISPM 3</b> were outdated and unnecessary.
<b>certificate</b>	Deleted by CPM-7 (2012). The former inclusion of this term, alongside <b>phytosanitary certificate</b> , allowed for the possibility that <b>NPPOs</b> may bilaterally agree to accept certificates other than <b>phytosanitary certificates</b> . This possibility is not referred to in <b>ISPMs</b> , and its inclusion was considered to cause confusion.
<b>classical biological control</b>	Deleted by CPM-3 (2008) after it disappeared from revised <b>ISPM 3</b> .
<b>competitor</b>	Deleted by CPM-7 (2012): Term no longer used in <b>ISPMs</b> .
<b>controlled area</b>	Deleted by CPM-10 (2015). <i>Controlled area</i> and <i>protected area</i> are redundant, making the collection of area-related definitions overly complicated. Both were defined as particular cases of <b>regulated area</b> . In addition this term is not used in <b>ISPMs</b> .
<b>control point</b>	Deleted by CPM-7, (2012). Adequately explained within the text of <b>ISPM 14</b> .
<b>country of re-export</b>	Until 1999, it was the <i>country of re-export</i> , which was defined rather than <b>re-exported consignment</b> .
<b>country of transit</b>	Until 1999, it was the <i>country of transit</i> , which was defined rather than the <b>consignment in transit</b> .
<b>debarking</b>	Replaced by <b>debarked wood</b> - CPM-3 (2008).
<b>dosimeter</b>	Deleted by CPM-7 (2012). Standard technical term relevant only to <b>ISPM 18</b> .
<b>dosimetry</b>	Deleted by CPM-7 (2012). Standard technical term relevant only to <b>ISPM 18</b> .

Old term	Reason for deletion
<b>ecoarea</b>	Deleted in 2005, after it disappeared from revised <b>ISPM 3</b> .
<b>establishment (of a biological control agent)</b>	Deleted by CPM-3 (2008) after it disappeared from revised <b>ISPM 3</b> .
<b>exotic</b>	Deleted by CPM-3 (2008) after it disappeared from revised <b>ISPM 3</b> . It was not considered appropriate to extend its application to organisms other than beneficial organisms, since its equivalent is used in at least French and Spanish as the translation of “alien”, which is a CBD term with a special meaning. Current English words such as “not indigenous”, “not native” or “not naturally present” are available to express the concept, without the implications of “alien”.
<b>field inspection</b>	This term, together with its synonym <i>growing season inspection</i> , was removed from the Glossary in 1999 when <b>ISPM 10</b> came to provide more detail on <b>pest free places of production</b> .
<b>Gray</b>	Deleted by CPM-7 (2012). Standard technical term relevant only to <b>ISPM 18</b> .
<b>growing season inspection</b>	See <i>field inspection</i> .
<b>hitch-hiker pest</b>	Formerly included as a synonym (in English only) of <b>contaminating pest</b> . Deleted by CPM-7 (2012) as part of a general policy not to mention synonymous terms within the Glossary.
<b>immediate vicinity</b>	This term was removed from the Glossary in 1999 when <b>ISPM 10</b> came to provide more detail on <b>pest free places of production</b> and <b>buffer zones</b> .
<b>Import Permit (of a biological control agent)</b>	Deleted by CPM-3 (2008), since the general definition of an <b>import permit</b> was considered adequate.
<b>introduction (of a biological control agent)</b>	Deleted in 1996 after it disappeared from revised <b>ISPM 3</b> .
<b>ionizing radiation</b>	Deleted by CPM-7 (2012). Standard technical term relevant only to <b>ISPM 18</b> .
<b>kiln-drying</b>	Deleted by CPM-13 (2018). Kiln-drying is an industrial process without a specific <b>IPPC</b> meaning. It is used for various purposes in the <b>wood</b> industry, not only to comply with <b>phytosanitary import requirements</b> , but also to meet quality requirements. There is no particular need for the term to be defined in the phytosanitary context. Moreover, <b>ISPM 39</b> explains the use of kiln-drying as a <b>phytosanitary measure</b> , which serves as a sufficient reference to the term.
<b>legislation</b>	Derived from the original version of <b>ISPM 3</b> . Deleted by CPM-7 (2012) as being inconsistent with the terms <b>phytosanitary legislation</b> , <b>phytosanitary regulation</b> and <b>phytosanitary measure</b> , and their definitions.
<b>micro-organism</b>	Deleted by CPM-3 (2008) after it disappeared from revised <b>ISPM 3</b> . In any case, it is a current scientific term, which does not require definition in the Glossary.

Old term	Reason for deletion
<b>naturally occurring</b>	Deleted by CPM-10 (2015). Term used only in the Glossary definition of <i>organism</i> . See <i>organism</i> .
<b>occurrence</b>	Deleted by CPM-10 (2015). Occurrence was defined in terms of presence that implies a status more specific and restricted than presence. The actual use in <b>ISPMs</b> does not seem to intend or require a distinction between occurrence and presence. Moreover, the Convention text (written before occurrence was defined) uses the two terms synonymously. Therefore the terms presence and occurrence should be accepted as synonyms in current <b>ISPMs</b> , and only presence and present (or absent for “does not occur”) should be used in future <b>ISPMs</b> .
<b>organism</b>	Deleted by CPM-10 (2015). Organism is a common term, and it is not used in <b>ISPMs</b> with any specific meaning for <b>IPPC</b> purposes. It was originally defined as an individual term for the purpose of <b>ISPM 3</b> , but is also used in other contexts.
<b>phytosanitary</b>	See <a href="#">note 17</a> . Originally defined as “pertaining to <b>plant quarantine</b> ”, but deleted in 1999.
<b>plant pest</b>	Formerly included as a synonym (in English only) of <b>pest</b> . Deleted by CPM-7 (2012), as part of a general policy not to mention synonymous terms within the Glossary.
<b>pot plant</b>	Originally distinguished from <b>plants for planting</b> in general by the fact that a pot <b>plant</b> is not intended to be <b>replanted</b> . However, it is impossible to <b>control</b> this, so the term was excluded (in the early 1990s).
<b>pre-clearance</b>	Deleted by CPM-13 (2018). The former definition of “pre-clearance” was not in accordance with the Convention as it indicated that <b>phytosanitary certification</b> can be performed by or under the regular supervision of the <b>national plant protection organization</b> of the country of destination. “Pre-clearance” is used in many different countries with very different meanings. Therefore, it was not possible to revise the definition of “pre-clearance” to adequately reflect all the various meanings of the term allowing for international <b>harmonization</b> and agreement.
<b>propagative material/propagating material</b>	Originally given as a synonym of <b>plants for planting</b> , but excluded in 1999 because it is often used to mean only vegetatively propagated material and this causes confusion.
<b>protected area</b>	Deleted by CPM-10 (2015). <i>Protected area</i> is used in <b>ISPMs</b> to a very limited extent. Where referring in <b>ISPMs</b> to a <b>regulated area</b> , that term could be used instead for consistency. The term <i>protected area</i> was meant to apply to <b>endangered area</b> , i.e. in the context of <b>PRA</b> . However, the revised <b>ISPM 2</b> already uses the term <b>regulated area</b> .
<b>quarantine (of a biological control agent)</b>	Deleted in 2005, after it disappeared from revised <b>ISPM 3</b> .
<b>quarantine procedure</b>	Changed to <b>phytosanitary procedure</b> in the early 1990s.
<b>region</b>	Originally defined in relation to <b>RPPOs</b> , but this was seen to be unnecessarily restrictive on the use of the word.

Old term	Reason for deletion
<b>restriction</b>	Deleted by CPM-10 (2015). It will always be possible and more correct to refer to <b>phytosanitary import requirements</b> . Most ISPMs already refer to the establishment of <b>phytosanitary import requirements</b> rather than to <i>restrictions</i> .
<b>specificity</b>	Deleted by CPM-3 (2008) from <b>ISPM 3</b> , since this term has a much wider application than to <b>biological control agents</b> and is only used incidentally in that <b>standard</b> .
<b>tissue culture</b>	This term was never defined, but a cross-reference to <b>plants</b> in tissue culture given until 2002.
<b>transit</b>	This term was never defined, but a cross-reference to <b>consignment in transit</b> is given.

## Appendix 2 - List of terms considered or under consideration by the TPG

This Appendix is a further element of the TPG's trace-back (see Appendix 1).

During the years of continuous development of the Glossary, many terms and definitions were proposed for inclusion, but not accepted. A list of these terms has been accumulated, but generally without much detail, especially for the earlier years. Some of the early terms have simply been overtaken by events. Accordingly, it is difficult to determine exactly when and by whom the terms were first proposed, at which meeting or meetings they were considered, and how it was decided that they should not appear in the Glossary. In a number of cases, the TPG simply decided “not needed” and, in the absence of any feedback to this decision, the term simply disappeared from the agenda. Other terms have been repeatedly discussed, with definitions proposed and then abandoned. In yet other cases, several related terms were considered, and the TPG decided to give its preference to one particular term, leaving the others aside.

Accordingly, little detail can be provided for the pre-2009 terms, but it is possible to provide a general explanation of the reasons for which these terms were set aside, or are still waiting to be processed.

Term	Explanation
A-1 <b>pest</b>	The terms A-1 <b>pest</b> and A-2 <b>pest</b> are sometimes used, in <b>pest</b> lists, to specify <b>pests</b> that are not present in the <b>area</b> concerned, or present but not widely distributed, respectively. Historically, these terms were used by <b>RPPOs</b> in making recommendations to their members on which <b>pests</b> to regulate. Some countries use these terms, or similar ones, in their lists of <b>regulated pests</b> . However, there is no consensus that this terminology should be generally applied.
A-2 <b>pest</b>	See “A-1 <b>pest</b> ”.
Acceptable level of risk	This term relates to the WTO/SPS Agreement. Attempts have been made to define it for the Glossary, but without success. A note was added in the General recommendations on consistency
Acceptance level	Now that the term <b>tolerance level</b> has been adopted, this term is not needed.
Alien species	This term arises from the CBD terminology, which is explained in Appendix 1 of the Glossary.
Appropriate level of protection	This term relates to the WTO/SPS Agreement. Attempts have been made to define it for the Glossary, but without success. A note was added in the General recommendations on consistency
Area-wide management or area-wide control	Not considered useful by the TPG. Widely used term that does not need to be defined. The term is descriptive and does not have a specific meaning for the <b>IPPC</b> .
Authorize, accredit, certify	Although these terms had been considered for inclusion and definition in the Glossary, TPG 2014-12 added instead a note in the General recommendations on consistency
Background specification	Not considered useful by the TPG.
Bark (as a commodity)	The discussions on the revision of the definitions for <b>bark</b> and <b>wood</b> in the TPG 2014-02 led to the proposal that <b>bark</b> did not need to be revised, but that it would be useful to define <b>bark</b> as a <b>commodity</b> . The TPG proposed a definition for isolated <b>bark</b> (as a <b>commodity</b> ). However, the SC in May 2014 did not agree with this proposal and agreed instead to define <b>bark</b> (as a <b>commodity</b> ). After member consultation TPG 2014-12 noted that several

Term	Explanation
	comments queried the need for this term because <b>bark</b> is already defined in its biological sense in <b>ISPM 5</b> . The TPG reiterated that two distinct definitions were needed to have a term that covers the definition of <b>bark</b> as a <b>commodity</b> , but SC May 2016 deleted the term from the list of topics for <b>IPPC</b> standards.
Bioindicator plant	Not considered useful by the TPG.
Biotype	Considered to have its usual meaning.
Certification assurance	Not considered useful by the TPG.
Cold treatment	Proposed to the TPG in 2009, and by the TPG to the SC. Not accepted, presumably because it is supposed to have its usual technical meaning.
Conditional host	A definition of this term is provided in <b>ISPM 37</b> .
Confidence interval	Considered to have its usual meaning in statistics.
Confidence level	Considered to have its usual meaning in statistics.
Confinement facility	Proposed by the TPG 2014-12 to the SC, based on proposal to revise “ <b>quarantine</b> ” by deleting “observation and research” from the definition because these purposes would not normally be understood to be <b>quarantine</b> . Added to the List of topics by SC May 2015. TPG 2015-12 agreed not to define the term based on the revision proposed for the term “ <b>quarantine</b> ”. SC May 2016 deleted the term from the list of topics for <b>IPPC standards</b>
Damage threshold	Now that the term <b>tolerance level</b> has been adopted, this term is not deemed necessary, although the meaning of the two is different.
Direct economic impact	Explained in Supplement 2 of the Glossary.
Domestic regulation	A proposed definition was rejected by SC in 2012, principally because agreement could not be reached whether to prefer “domestic”, “national”, or “internal”. The point that “domestic regulations” are not <b>phytosanitary regulations</b> is still not made clear within the Glossary itself.
Donor organism	Not considered useful by the TPG.
Ecological distribution	The ecological distribution of a <b>pest</b> is the geographical <b>area</b> where conditions allow it to survive, while the economic distribution is the <b>area</b> where it has economic importance. These do not necessarily coincide. However, these are theoretical concepts, which are difficult to apply during <b>PRA</b> in practice.
Economic distribution	See “ecological distribution”.
Economic assessment	Explained in Supplement 2 of the Glossary.
Effective dose	A proposal had been made to define this term, as ED values for adopted <b>treatments</b> (annexes of <b>ISPM 28</b> ). However, these are levels of <b>efficacy</b> at a stated statistical confidence level, and not doses. SC in 2015 approved ink amendments to describe the level of <b>efficacy</b> achieved by a <b>treatment schedule</b> instead of using “effective dose” or “ED”.
Effectiveness	Not considered useful by the TPG. A note was added in the General recommendations on consistency.

Term	Explanation
Efficacy	Not considered useful by the TPG. <b>Efficacy</b> (of a <b>treatment</b> ) is already defined. A note was added in the General recommendations on consistency.
Electronic certification	The need for this new term disappeared when CPM-7 (2012) modified the definition of <b>phytosanitary certificate</b> to include the concept.
Emerging pest	SC 2018-05 considered proposal from TC- <b>RPPOs</b> and agreed to include the term in the TPG work programme. TPG 2018–12 agreed a definition to be sent for SC consideration in May 2019.
Examination technique	Not considered useful by the TPG.
Fixed risk inspection	Not considered useful by the TPG.
Gene	Considered to have its usual technical meaning.
Genotype	Considered to have its usual technical meaning.
Genotypic characteristic	Considered to have its usual technical meaning.
Geographical distribution	Considered to have its obvious meaning.
Hazard (phytosanitary)	Although use of the term “hazard” is now accepted in most kinds of <b>pest risk analysis</b> , it has in practice been avoided in the <b>ISPMs</b> on <b>PRA</b> . It is considered confusing and difficult to translate into other languages. Furthermore, the terms <b>pest</b> and <b>pest risk</b> seem sufficient.
Host susceptibility	Other terms for hosts related to fruit flies are being developed, so this term is not needed.
Import license	This concept is covered by the term <b>import permit</b> .
Identity	Definition now under consideration in relation to a consignment.
Identity preservation system	Not considered useful by the TPG.
Infection	The TPG recognized that, traditionally, pathogens infect, while <b>pests</b> <b>infest</b> , and that this usage is current in many contexts. However, the <b>IPPC</b> has from the beginning worked with a broad concept of a “ <b>pest</b> ”, including pathogens. For consistency, there should not be some <b>pests</b> , which <b>infest</b> and others, which infect. As specified in the definition of <b>infestation</b> : “ <b>infestation</b> includes infection”.
Inactivation	Considered to have its obvious meaning.
Inspection programme	Considered to have its obvious meaning.
Inspection technique	Considered to have its obvious meaning.
Intentional introduction	This term arises from the CBD terminology, which is explained in Appendix 1 of the Glossary. The term could not be used in the Glossary, because it would mean “intentional <b>entry</b> and <b>establishment</b> ”.
Invasive	This term arises from the CBD terminology, which is explained in Appendix 1 of the Glossary.
Invasive alien species	This term arises from the CBD terminology, which is explained in Appendix 1 of the Glossary.
List of RNQPs	Considered to have its obvious meaning.
List of quarantine pests	Considered to have its obvious meaning.
List of regulated pests	Considered to have its obvious meaning.

Term	Explanation
Managed risk	The term is adequately explained in <b>ISPM 1</b> .
Maximum allowable prevalence	This term was used in early drafts of the <b>ISPM</b> on <b>inspection</b> (now divided into <b>ISPMs</b> 23 and 31). Its use implied that any <b>inspection</b> procedure entails a certain risk of <b>infestation</b> below the allowable <b>incidence</b> , i.e. what has now been defined as the <b>tolerance level</b> . This wording (especially the word “allowable”) created difficulties for many contracting parties, and its use was therefore abandoned. The concept was explained in more neutral terms.
Mitigation	This term is in current use in <b>pest risk analysis</b> . However, it has not been used in <b>ISPMs</b> , and it is considered to be technical jargon, limited to <b>pest risk management</b> . The aim of <b>pest risk management</b> may be to mitigate, or better “reduce” risk, but the aim of <b>phytosanitary measures</b> is to prevent <b>introduction</b> and <b>spread</b> of <b>pests</b> .
Non-actionable occurrence	This concept is adequately explained in <b>ISPM 8</b> .
Non-squared wood	This term belongs to a group of terms concerning <b>wood</b> , used by EPPO but not considered necessary for the Glossary.
Not widely distributed	This concept is now explained in the Supplement 1 to <b>ISPM 5</b> as revised in 2012.
Novel trait	A term concerning <b>LMOs</b> , with very limited application in the <b>plant</b> protection context.
Nursery stock	This term is used differently worldwide, and is not needed in view of the term <b>plants for planting</b> .
Packing wood	See “non-squared <b>wood</b> ”.
Particle wood	See “non-squared <b>wood</b> ”.
Pest freedom	Not considered useful by the TPG.
Pest list/Pest listing	Proposed for definition in 2013, but the TPG did not consider it useful, and left the related terms “ <b>commodity pest list</b> ” and “ <b>host pest list</b> ” as they were.
Pest risk management option	Not considered useful by the TPG. Instead a clarification on the use of the terms “ <b>pest risk management</b> ”, “risk management” and “pest management” in <b>ISPMs</b> has been prepared by TPG 2008-10 to clarify that “pest management” means the complex of methods used to control <b>pests</b> in practice in the <b>field</b> , and it is used correctly in <b>ISPMs</b> where it occurs. “Risk management” alone or in combination with “options” or other terms, is a condensed form of “ <b>pest risk management</b> ”. The latter is a defined Glossary term, and should everywhere replace “risk management”.
Phenotype	Considered to have its usual technical meaning.
Phenotypic characteristic	Considered to have its usual technical meaning.
Phytosanitary considerations	Considered to have its obvious meaning.
Phytosanitary hazard	See “hazard”.
Phytosanitary requirement	Replaced by <b>phytosanitary import requirements</b> .
Phytosanitary risk analysis	At one point in the revision of <b>ISPM 2</b> , there was a suggestion to make a distinction between phytosanitary risk analysis and <b>pest risk analysis</b> . This was abandoned, partly because of difficulties with translation.

Term	Explanation
Phytosanitary security	The term is defined in the Glossary for a <b>consignment</b> , but it is not clear in what other contexts it might be used.
Phytosanitary status	This term is frequently used in <b>ISPMs</b> , but in most cases the text could be reworded using other Glossary terms. However, this is not the case for use in <b>ISPM 12</b> , section on “ <b>country of origin</b> ”, where “phytosanitary status” is a variable which can be followed in a <b>consignment</b> from its origin to its final destination.
Plant health	As explained in <a href="#">note 17</a> of the Annotated Glossary, there is no consensus on this term.
Plant protection	See “ <b>plant health</b> ”.
Precautionary measure	Considered to have its obvious meaning. It is not clear how it is relevant to <b>plant protection</b> .
Precautionary principle	A concept developed politically in relation to human health. In <b>plant protection</b> , it can be argued that <b>PRA</b> involves the reasoned application of the precautionary principle to <b>plant pests</b> , but subject to the principles of <b>ISPM 1</b> .
Premise freedom	Premises are, presumably, either <b>places of production</b> or <b>production sites</b> (see <b>ISPM 8</b> ), so the term is not needed.
Presence	Not considered useful by the TPG because it has its obvious meaning.
Prevalence	The term only arises as part of the term <b>area of low pest prevalence</b> (derived from the WTO/SPS Agreement) and is not used in its definition. There is no apparent need to use the term as such in <b>plant protection</b> .
Probability	Considered to have its usual meaning in statistics.
Production area	An ambiguous concept, better expressed as an <b>area, place of production, or production site</b> , as appropriate (see <b>ISPM 8</b> ).
Quality pest	A term which was in use decades ago, but has dropped out of use. It had several meanings, according to context: any <b>pest</b> which is not a <b>quarantine pest</b> ; a <b>pest</b> which directly affects the marketability of a <b>consignment</b> ; an <b>RNQP</b> . It has been replaced by more precise terms.
Risk-based inspection	See “maximum allowable prevalence”. This concept is based on the theoretical consideration that, once a risk has been quantified, it becomes possible to design an <b>inspection</b> procedure (or other <b>phytosanitary measures</b> ) on a precise quantitative basis.
Risk management option	See “ <b>pest risk management option</b> ”.
Safeguard	This term is used in some parts of the world, but not at all in others, so its value is not universally recognized. It needs to be clarified before a decision can be made to use and define it.
Sample design	Considered to have its usual meaning in statistics, and now covered by <b>ISPM 31</b> .
Sample method	Considered to have its usual meaning in statistics, and now covered by <b>ISPM 31</b> .
Sample unit	Considered to have its usual meaning in statistics, and now covered by <b>ISPM 31</b> .
Sampling	Considered to have its usual meaning in statistics, and now covered by <b>ISPM 31</b> .

Term	Explanation
Sampling (for detection)	Considered to have its usual meaning in statistics, and now covered by <b>ISPM 31</b> .
Security (of a consignment)	Now expressed as <b>phytosanitary security</b> (of a <b>consignment</b> ).
Sentinel	Obscure.
Severity	Context not clear.
Special permit	Context not clear.
Soil	It is difficult, and not necessary, to provide a general definition of the term “soil”. <b>Phytosanitary measures</b> concerning soil have to specify exactly what they require.
Solid wood packing material	See “non-squared <b>wood</b> ”.
Specified pest	Considered to have its obvious meaning.
Squared wood	See “non-squared <b>wood</b> ”.
Strain	Considered to have its usual scientific meaning.
Target pest	Considered to have its obvious meaning.
Threshold	Now that the term <b>tolerance level</b> has been adopted, this term is not needed.
Threshold level	Now that the term <b>tolerance level</b> has been adopted, this term is not needed.
Tolerance	Now that the term <b>tolerance level</b> has been adopted, this term is not needed.
Traceability	Considered to have its usual meaning.
Trading partners	It was originally supposed that “trading partners” were obviously countries, and on this basis no definition was thought to be necessary. However, some users applied the term to stakeholders and commercial companies. The TPG 2014-12 added a note to the General recommendations on consistency to avoid using the term.
Transgene vector	A term concerning <b>LMOs</b> , with very limited application in the <b>plant</b> protection context.
Unintentional introduction	See “intentional <b>introduction</b> ”.
Unlisted pest	Considered to have its obvious meaning.
Unspecified pest	Considered to have its obvious meaning.
Waste wood	See “non-squared <b>wood</b> ”.
Widely distributed	See “not widely distributed”.

### Appendix 3 - History of the Glossary

A presentation of the history of the Glossary group is considered useful:

- (1) as a further element of trace-back (see Appendix 1)
- (2) as an archival record
- (3) for transparency.

The Glossary of Phytosanitary Terms was developed in three phases, the principal events being summarized in Table 1. In the 1980s, there were separate initiatives in North America (through NAPPO) and Europe (through EPPO) to develop standardized terminology in **plant quarantine**. It was soon realized that these efforts should be combined, and directed towards global standardization. Messrs Hopper (NAPPO) and Smith (EPPO) took on the role of what would now be called ‘stewards’ for development of a “Core vocabulary of phytosanitary terminology”. Through the technical meetings of NAPPO and EPPO (particularly at a joint meeting in Tunis in 1987), and through the Informal Consultations of **RPPOs** which were organized by FAO in 1986 and 1988, a draft was prepared for consideration. In 1989, in view of the growing need for global cooperation in **plant quarantine**, FAO decided to formalize the consultations between **RPPOs**, so that the 1<sup>st</sup> Technical Consultation (TC) of **RPPOs** was convened. These and subsequent TCs in the early 1990s were attended by member governments of **RPPOs** as well as by members of their secretariats. Thus it was possible for the TC to organize consultation on the draft “Core vocabulary” in much the same way as was done at that time by FAO Expert Consultations. In 1990, the text was finalized and published in *FAO Plant Protection Bulletin* by the Secretariat of the **Plant** Protection Division of FAO, with the addition of French and Spanish translations.

In the second phase, by the time of the 5<sup>th</sup> TC in 1993, other harmonized texts were being developed (Principles of **plant quarantine**; guidelines for **PRA**). A specialist committee became necessary to sustain the increasing volume of work, hence the creation of the Committee of Experts on **Phytosanitary measures**, or CEPM. The new texts introduced new ideas, and it became clear that the Glossary needed to be revised and extended. Accordingly, an FAO Glossary Working Group was convened, with a membership largely drawn from the circle of experts who had taken part in the TCs of the previous years. After further meetings in 1994/1996, the Glossary was adopted as **ISPM 5**, by the approval procedures of the time, passing from the CEPM to the FAO Conference. Versions in the other FAO official languages (Arabic and Chinese) were incorporated. The 1996 Glossary took its present published form, with the texts in the five languages, a multilingual index, and indications in the text of the year of first appearance, or latest revision, of each term and definition.

In the third phase, the Glossary, as **ISPM 5**, was integrated into the regular standard-setting procedures which followed from the revision of the **IPPC** in 1997. Revisions thus passed through the Interim Standards Committee (or later Standards Committee) to the Interim **Commission** on Phytosanitary measures (ICPM, or later **Commission** on Phytosanitary measures, CPM), with appropriate consultation of member governments. **ISPM 5** nevertheless remained distinct from the other **ISPMs**: it is revised every year (but only with respect to changes put forward for consideration); it has always to take account of new terminology appearing in other **ISPMs**; the Glossary Working Group has retained its identity and membership through many meetings. This has finally led to the replacement of the working group by a Technical Panel.

This brief recapitulation of the history of the Glossary spans the whole period through which the present arrangements for global cooperation in **plant** protection were envisaged, planned and realized. The Glossary started before any “SPS Agreement” existed, and is now thoroughly integrated in the system of **ISPMs**. Its history exemplifies the successive stages by which global cooperation has been organized and effective international consultation has been achieved.

**Table 1** Principal events in the development of the Glossary of Phytosanitary Terms, with details on all the meetings of the Glossary working group and Technical panel for the Glossary

1986	May	1 <sup>st</sup> Informal Consultation of RPPOs recommends creation of a “Core vocabulary of phytosanitary terms”. Messrs Hopper (NAPPO) and Smith (EPPO) take on the role of stewards to combine and develop work already undertaken in North America and Europe	Rome	
1988	Feb	2 <sup>nd</sup> Informal Consultation of RPPOs reviews ongoing consultations within and between NAPPO and EPPO	Rome	
1989	Sep	1 <sup>st</sup> TC of RPPOs receives draft “Core vocabulary” and comments are invited from all RPPOs to be analysed by the FAO Secretariat. English, French and Spanish versions are prepared	Rome	
1990		Publication of the “FAO Glossary of phytosanitary terms” in <i>FAO Plant Protection Bulletin</i>		
1993	May	5 <sup>th</sup> TC of RPPOs notes that the development of the “Principles of plant quarantine” and “Guidelines for PRA” (later to become ISPMs 1 and 2) calls for revision and extension of the Glossary. It recommends constitution of a formal Glossary Working group (GWG) to make recommendations to the Committee of Experts on Phytosanitary measures (CEPM), whose creation is recommended at the same meeting	Rome	
1994	Feb	1 <sup>st</sup> meeting of GWG. Numerous additions and modifications to the old text are put forward	Paris	Hedley (FAO), Hernandez (CU), Hopper (NAPPO), Ikin (FAO), Pemberton (GB), Smith (EPPO)
1994	May	1 <sup>st</sup> meeting of CEPM approves many of the proposals of the GWG but returns others for further consideration	Rome	
1995	May	2 <sup>nd</sup> meeting of CEPM decides publication of a revised Glossary	Rome	
1995	Sep	2 <sup>nd</sup> meeting of GWG makes proposals for further terms to appear in the revised Glossary	Paris	Hedley (FAO), Hopper (NAPPO), Klay (CH), Pemberton (GB), Smith (EPPO), Trujillo (MX)
1996	May	3 <sup>rd</sup> meeting of CEPM considers GWG proposals and finalizes new version. Arabic and Chinese versions are prepared	Rome	
1997		New version of the Glossary approved by the 29 <sup>th</sup> Session of FAO Conference and published as ISPM No. 5		

1997		New revised text of the IPPC approved by the 29 <sup>th</sup> Session of FAO Conference. Interim Commission on Phytosanitary measures (ICPM), created as a result of this decision, takes charge of the work programme.		
1999	Feb	3 <sup>rd</sup> meeting of GWG reviews ISPM No. 5 in the light of the new revised text of the IPPC and of terms used in recent ISPMs	Paris	Griffin (FAO), Guillén (AR), Hedley (NZ), McDonnell (NAPPO), Petter (FR), Smith (EPPO)
1999	Mar	6 <sup>th</sup> meeting of CEPM in Rome approves GWG proposals, and passes them to 2 <sup>nd</sup> ICPM. Henceforth, revision of the Glossary follows ICPM rules*. Preparation of an Annotated Glossary is first suggested	Rome	
2000	Mar	4 <sup>th</sup> meeting of GWG, followed by special meeting in Bordeaux, which prepared the first supplement to the Glossary (on “Official control”). CEPM replaced by Interim Standards Committee	Paris	Bast-Tjeerde (CA), Canale (UY), Griffin (FAO), Hedley (NZ), Petter (FR), Smith (EPPO)
2001	Mar	5 <sup>th</sup> meeting of GWG	Paris	Bast-Tjeerde (CA), Canale (UY), Griffin (FAO), Hedley (NZ), Petter (FR), Smith (EPPO)
2002	Feb	6 <sup>th</sup> meeting of GWG, followed by special meeting in Paris which prepared the second supplement to the Glossary (on “Potential economic importance”)	Paris	Bast-Tjeerde (CA), Griffin (FAO), Hedley (NZ), Petter (FR), Smith (EPPO)
2003	Feb	7 <sup>th</sup> meeting of GWG	Ottawa	Bast-Tjeerde (CA), Canale (UY), Griffin (FAO), Hedley (NZ), Larson (FAO), McDonnell (NAPPO), Smith (EPPO)
2004	Feb	8 <sup>th</sup> meeting of GWG. Membership extended to cover Arabic and Chinese	Paris	Bast-Tjeerde (CA), Canale (UY), Grousset (FAO), Hedley (NZ), Katbeh-Bader (JO), Smith (EPPO), Xu Yan (CN)
2004	Oct	9 <sup>th</sup> meeting of GWG	Rome	Bast-Tjeerde (CA), Canale (UY), Grousset (FAO), Hedley (NZ), Katbeh-Bader (JO), Smith (EPPO), Xu Yan (CN)
2005	Oct	10 <sup>th</sup> meeting of GWG (last meeting, since the GWG is converted into a Technical panel in 2006)	Rome	Bast-Tjeerde (CA), Canale (UY), Grousset (FAO), Hedley (NZ), Katbeh-Bader (JO), Smith (EPPO), Xu Yan (CN)

2006	Mar	CPM-1 creates Technical Panel for the Glossary	Rome	
2006	Oct	1 <sup>st</sup> meeting of the Technical Panel for the Glossary	Rome	Bast-Tjeerde (CA), Grousset (FAO), Hedley (NZ), Katbeh-Bader (JO), Peralta (COSAVE), Smith (EPPO), Wu Lifeng (CN)
2007	Oct	2 <sup>nd</sup> meeting of the Technical Panel for the Glossary	Rome	Bast-Tjeerde (CA), Grousset (FAO), Hedley (NZ), Katbeh-Bader (JO), Peralta (COSAVE), Smith (EPPO), Wu Lifeng (CN)
2008	Oct	3 <sup>rd</sup> meeting of the Technical Panel for the Glossary	Copenhagen	Bast-Tjeerde (CA), Hedley (NZ), Katbeh-Bader (JO), Nordbo (DK), Peralta (COSAVE), Smith (EPPO), Wu Lifeng (CN)
2009	Jun	4 <sup>th</sup> meeting of the Technical Panel for the Glossary, primarily to establish a programme for checking the consistent use of terminology in ISPMs, henceforth a major activity of the TPG	Rome	Bast-Tjeerde (CA), Hedley (NZ), Katbeh-Bader (JO), Peralta (COSAVE), Smith (EPPO)
2009	Oct	5 <sup>th</sup> meeting of the Technical Panel for the Glossary	Rome	Bast-Tjeerde (CA), Grousset (FAO), Hedley (NZ), Katbeh-Bader (JO), Nordbo (DK), Peralta (COSAVE), Smith (EPPO)
2010	Oct	6 <sup>th</sup> meeting of the Technical Panel for the Glossary	Rome	Bast-Tjeerde (CA), Grousset (FAO), Hedley (NZ), Katbeh-Bader (JO), Nordbo (DK), Smith (EPPO), Wang Yuxi (CN)
2011	Nov	7 <sup>th</sup> meeting of the Technical Panel for the Glossary. <i>Membership extended to cover Russian</i>	Rome	Grousset (FAO), Hedley (NZ), Melcho (UY), Nordbo (DK), Orlinski (EPPO), Smith (EPPO)
2012	Oct	8 <sup>th</sup> meeting of the Technical Panel for the Glossary	Rome	Grousset (FAO), Hedley (NZ), Melcho (UY), Moller (FAO), Ning (CN), Nordbo (DK), Omar (EG), Orlinski (EPPO), Smith (EPPO)
2013	Feb	9 <sup>th</sup> meeting of the Technical Panel for the Glossary	Rome	Grousset (FAO), Hedley (NZ), Melcho (UY), Moller (FAO), Ning (CN), Nordbo (DK), Omar (EG), Orlinski (EPPO), Smith (EPPO)
2014	Feb	10 <sup>th</sup> meeting of the Technical Panel for the Glossary	Rome	Bloem (US), Bouhot-Delduc (FR), Grousset (FAO), Hedley (NZ), Melcho (UY),

2014	Dec	11 <sup>th</sup> meeting of Technical Panel for the Glossary	Rome	Moller (FAO), Ning (CN), Nordbo (DK), Omar (EG), Orlinski (EPPO), Smith (invited expert)  Bloem (US), Bouhot-Delduc (FR), Grousset (FAO), Hedley (NZ), Melcho (UY), Moller (FAO), Moreira (FAO), Nordbo (DK), Omar (EG), Orlinski (EPPO)
2015	Dec	12 <sup>th</sup> meeting of Technical Panel for the Glossary	Rome	Bloem (US), Bouhot-Delduc (FR), Germain (FAO), Hedley (NZ), Melcho (UY), Moller (FAO), Nordbo (DK), Omar (EG), Orlinski (EPPO), Ning (CN)
2016	Dec	13 <sup>th</sup> meeting of Technical Panel for the Glossary	Rome	Bloem (US), Bouhot-Delduc (FR), Hedley (NZ), Melcho (UY), Moller (FAO), Nordbo (DK), Omar (EG), Orlinski (EPPO), Ning (CN)
2017	Dec	14 <sup>th</sup> meeting of Technical Panel for the Glossary	Rome	Bloem (US), Bouhot-Delduc (FR), Germain (FAO), Hedley (NZ), Melcho (UY), Moller (FAO), Nordbo (DK), Omar (EG), Orlinski (EPPO), Ning (CN)
2018	Dec	15 <sup>th</sup> meeting of Technical Panel for the Glossary	Rome	Bouhot-Delduc (FR), Koech (KE), Melcho (UY), Ning (CN), Nordbo (DK), Omar (EG), Orlinski (EPPO), Ramarathnam (invited expert), Goritschnig (FAO), Kiss (FAO)

\*In consequence, no further details are given here on approval of Glossary revisions by the Standards Committee, ICPM or CPM.

## IPPC

The International Plant Protection Convention (IPPC) is an international plant health agreement that aims to protect cultivated and wild plants by preventing the introduction and spread of pests. International travel and trade are greater than ever before. As people and commodities move around the world, organisms that present risks to plants travel with them.

### Organization

- ◆ There are over 180 contracting parties to the IPPC.
- ◆ Each contracting party has a national plant protection organization (NPPO) and an Official IPPC contact point.
- ◆ Nine regional plant protection organizations (RPPOs) work to facilitate the implementation of the IPPC in countries.
- ◆ IPPC liaises with relevant international organizations to help build regional and national capacities.
- ◆ The Secretariat is provided by the Food and Agriculture Organization of the United Nations (FAO).

### International Plant Protection Convention (IPPC)
