# DRAFT ANNEX TO ISPM 28: Cold treatment for Ceratitis capitata on Prunus avium, Prunus salicina and Prunus persica (2017-022A)

Status box	
This is not an official part of the standard and it will be modified by the IPPC Secretariat after adoption.	
Date of this document	2020-11-30
Document category	Draft annex to ISPM 28
Current document stage	To CPM-15 (2021) for adoption
Major stages	2017-06 Treatment submitted in response to 2017-02 call for treatments
	(Cold treatment of Australian stone fruit against Mediterranean fruit fly and
	Queensland fruit fly).
	2017-10 Technical Panel on Phytosanitary Treatments (TPPT) reviewed the
	submission (virtual meeting).
	2018-05 SC added topic Cold treatment of stone fruit against Ceratitis
	capitata (2017-022A) to the TPPT work programme with priority 1.
	2018-06 TPPT revised the draft and recommended it to SC for consultation.
	2018-11 TPPT final review via e-forum (2018_eTPPT_Oct_01).
	2019-03 SC approved the draft for consultation via e-decision
	(2019_eSC_May_08).
	2019-07 First consultation.
	2020-02 TPPT reviewed the responses to consultation comments and the
	draft and recommended it to the SC for approval for second consultation.
	2020-03 TPPT finalized the responses to consultation comments via e-
	forum (2020_eTPPT_Feb_01)
	2020-04 SC approved the responses to comments and the draft for second
	consultation via e-decision (2020_eSC_May_13).
	2020-07 Second consultation.
	2020-11 TPPT meeting reviewed and recommended to the SC for approval
	for adoption by the CPM.
Treatment Lead	2017-07 Toshiyuki DOHINO (JP)
Notes	2018-06 TPPT: Prunus persica in this draft PT includes peaches and
	nectarines
	2018-07 Edited
	2020-03 Target regulated article is confirmed to be Prunus salicina based
	on the tested cultivars 'Angelino' and 'Tegan Blue' and not Prunus
	domestica
	2020-11 Edited

## **Scope of the treatment**

This treatment describes the cold treatment of fruit of *Prunus avium* (cherry), *Prunus salicina* (Japanese plum) and *Prunus persica* (peach and nectarine) to result in the mortality of eggs and larvae of *Ceratitis capitata* at the stated efficacy.<sup>1</sup>

## **Treatment description**

Name of treatment Cold treatment for Ceratitis capitata on Prunus avium, Prunus salicina and

Prunus persica

**Active ingredient** n/a

**Treatment type** Physical (cold)

Target pest Ceratitis capitata (Wiedemann, 1824) (Diptera: Tephritidae)

Target regulated articles Fruit of Prunus avium (cherry), Prunus salicina (Japanese plum) and

Prunus persica (peach and nectarine)

#### **Treatment schedules**

## Schedule 1: 1 °C or below for 16 continuous days

For *Prunus avium* there is 95% confidence that the treatment according to this schedule kills not less than 99.9979% of eggs and larvae of *Ceratitis capitata*.

For *Prunus salicina* there is 95% confidence that the treatment according to this schedule kills not less than 99. 9984% of eggs and larvae of *Ceratitis capitata*.

For *Prunus persica* there is 95% confidence that the treatment according to this schedule kills not less than 99.9983% of eggs and larvae of *Ceratitis capitata*.

<sup>&</sup>lt;sup>1</sup> The scope of phytosanitary treatments does not include issues related to pesticide registration or other domestic requirements for contracting parties' approval of treatments. Treatments adopted by the Commission on Phytosanitary Measures may not provide information on specific effects on human health or food safety, which should be addressed using domestic procedures before contracting parties approve a treatment. In addition, potential effects of treatments on product quality are considered for some host commodities before their international adoption. However, evaluation of any effects of a treatment on the quality of commodities may require additional consideration. There is no obligation for a contracting party to approve, register or adopt the treatments for use in its territory.

Schedule 2: 3 °C or below for 20 continuous days

For Prunus avium there is 95% confidence that the treatment according to this schedule kills not less

than 99.9982% of eggs and larvae of Ceratitis capitata.

For Prunus salicina there is 95% confidence that the treatment according to this schedule kills not less

than 99.9978% of eggs and larvae of Ceratitis capitata.

For *Prunus persica* there is 95% confidence that the treatment according to this schedule kills not less

than 99.9986% of eggs and larvae of Ceratitis capitata.

For both schedules, the fruit must reach the treatment temperature before treatment exposure time

commences. The fruit core temperature should be monitored and recorded, and the temperature should

not exceed the stated level throughout the duration of the treatment.

This treatment should be applied in accordance with the requirements of ISPM 42 (Requirements for the

use of temperature treatments as phytosanitary measures).

Other relevant information

In evaluating this treatment, the Technical Panel on Phytosanitary Treatments considered issues

associated with temperature regimes and thermal conditioning, taking into account the work of Hallman

and Mangan (1997).

Schedules 1 and 2 were based on the work of De Lima (2011) and developed using failure to pupariate

as the measure of mortality.

The efficacy of schedule 1 was calculated based on the following estimated numbers of treated Ceratitis

capitata with no survivors:

for Prunus avium: 143 810

for Prunus salicina: 185 646

Jfor Prunus persica: 174 710.

The efficacy of schedule 2 was calculated based on the following estimated numbers of treated Ceratitis

capitata with no survivors:

for Prunus avium: 163 906

for Prunus salicina: 133 798

for Prunus persica: 218 121.

Schedules 1 and 2 were developed using the following commodities and cultivars:

Prunus avium (cherry) (cultivars 'Sweetheart' and 'Lapin')

Prunus salicina (Japanese plum) (cultivars 'Angelino' and 'Tegan Blue')

- Prunus persica (peach) (cultivars 'Snow King' and 'Zee Lady')
- Prunus persica var. nectarina (nectarine) (cultivars 'Arctic Snow' and 'August Red').

In this treatment, *Prunus persica* includes all cultivars and varieties, including nectarines (Vendramin *et al.*, 2014).
