

# Panama TR4 Program

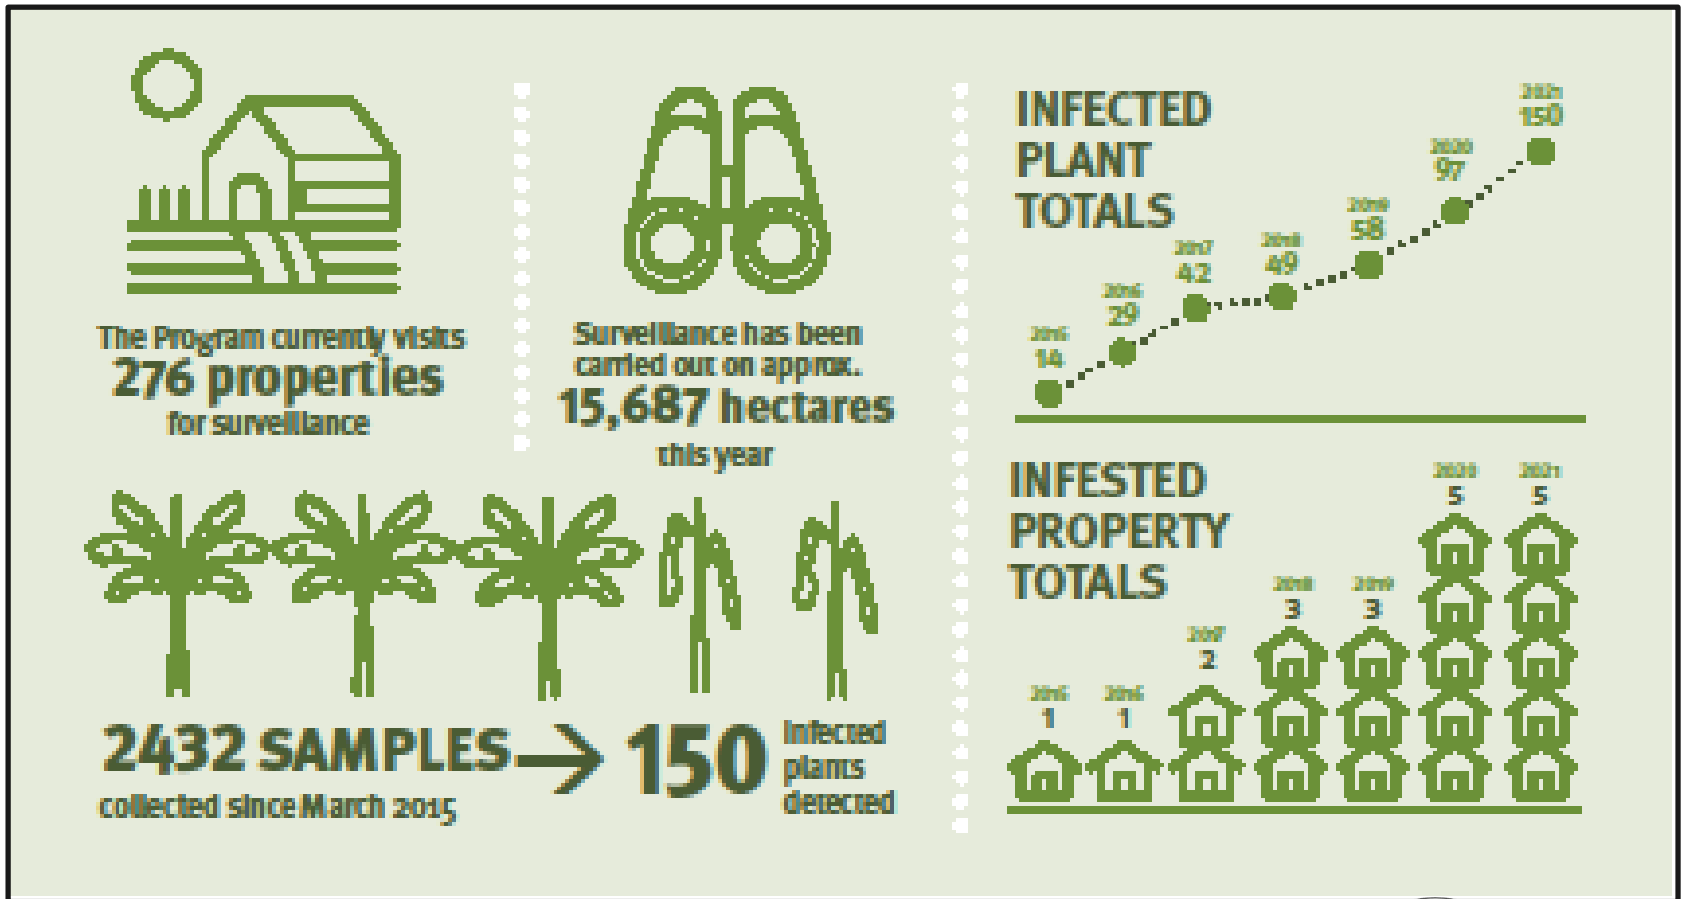

---

Queensland  
Australia

# Queensland's situation

Reflecting on the current rate of spread in Far North Queensland when compared to international situations, Queensland is a world leader in Banana Fusarium Wilt containment.

Data as at 15 September 2021

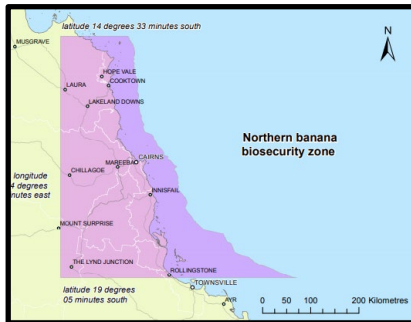

# Control & containment

## What are the keys to our success?

Early detection through surveillance

Destruction of infected plants

Collaboration

Compliance on infested properties

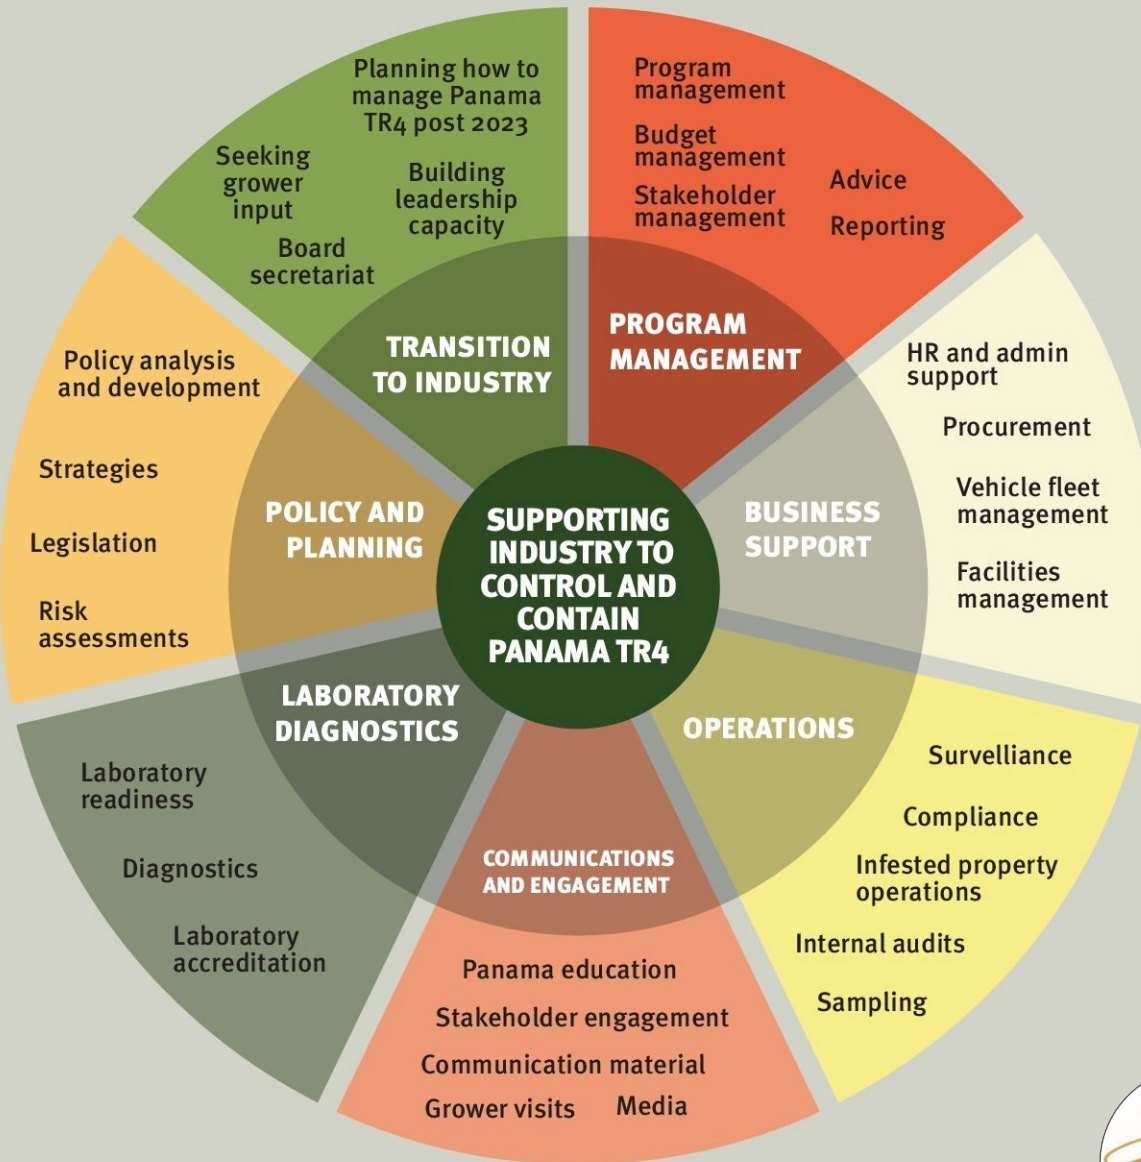

Stakeholder education

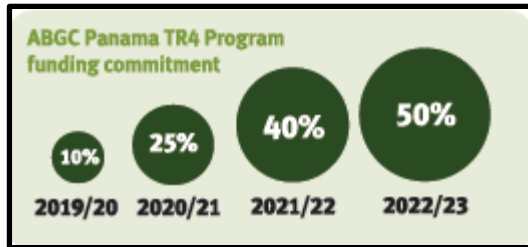

# Panama TR4 Program

# Empowering industry

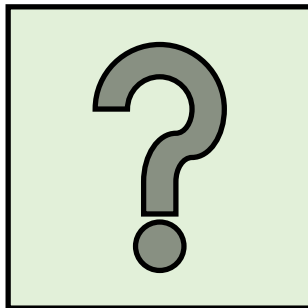

The Program has been joint funded by industry since 2019

A Program Management Board was appointed in 2020 to provide strategic guidance to the Program

In 2023 a managed response for Panama TR4 will be lead by industry

The Program is transitioning leadership of disease management
