# IPPC resources on e-commerce

**Thorwald Geuze, NPPO The Netherlands, IC-lead on e-commerce**

## E-commerce challenges

- huge volume of small parcels moving on the postal and courier pathways (often away from normal inspection points)
- direct sales to consumers who demand rapid delivery
- many new, casual or infrequent sellers and buyers
- limited information on the content of the parcels
- anonymity of the internet makes it difficult to identify sellers
- deliberate misrepresentation and fraud is common

# E-commerce supply chain

Seller lists items on an e-commerce platform or marketplace. Prohibited items are not listed and potential buyers are advised to check phytosanitary import requirements before ordering restricted items.

Buyer places their order, provides the delivery address, selects a delivery method and completes the transaction via an online-payment service provider.

The items are either delivered to the buyer or the buyer is notified that the items were seized with an explanation and educational materials.

Seller or e-commerce platform receives the order, verifies phytosanitary import requirements of destination country and packages the items for shipping.

The parcel is subject to possible targeting, screening and phytosanitary inspection at entry to the destination country. Non-compliant items are subject to corrective action or disposal.

Seller or e-commerce platform completes the customs declaration and dispatches the parcel via postal or courier service.

The customs declaration and other accompanying documents are submitted to customs and other relevant agencies in the destination country, ideally via a single window.

## IPPC resources on e-commerce

- E-commerce webpage on the International Phytosanitary Portal (IPP → Strategic objectives → Plant Health & Safe Trade → E-commerce)
- Videos
- News stories
- Contributed resources
- IPPC e-commerce guide

## E-commerce

### Key Facts

- 161 billion parcels, or 5102 parcels per second, were shipped in 2022 (Pitney Bowes, 2023).
- The huge growth in parcel volume puts pressure on the normal components of phytosanitary export and import systems.
- Intercepting parcels that contain goods that do not meet the phytosanitary import requirements of the destination country is one of the biggest challenges facing NPPOs.
- Managing e-commerce and the postal and courier pathways is a key priority within the IPPC strategic framework.

The global rise of e-commerce has brought about a transformative shift in the way goods are bought and sold and moved in international trade.

While presenting economic opportunities, the growth in e-commerce also poses significant challenges to national plant protection organizations (NPPOs) because of the potential spread of plant pests through parcels moving on postal and courier pathways.

On this page you will find key resources about e-commerce and plant health, including a video highlighting the role of all e-commerce stakeholders in addressing pest risks, the IPPC guide on e-commerce, news stories featuring country case studies and links to other national and international e-commerce resources.

Contributed resources (External resources)

Contributed resources are phytosanitary technical resources that were developed by National Plant Protection Organizations (NPPOs), Regional Plant Protection Organizations (RPPOs) and other organizations for their own use and which are shared with the entire IPPC community.

Disclaimer: Resources on this page are not intended to be interpretations of ISPMs and terminology used may not be consistent with ISPM 5. Unless otherwise indicated resources, or pest distributions contained within them are not endorsed/adopted/agreed by the CPM nor developed under the auspices of the IPPC Secretariat, and are the exclusive responsibility of the author of the contributed phytosanitary resource.

## E-commerce: A guide to managing the pest risk posed by goods ordered online and distributed through postal and courier pathways

- identifies key challenges faced by NPPOs
- provides practical guidance for improving cooperation and collaboration with key stakeholders
- highlights pre-border and border activities that NPPOs may use to help mitigate pest risk on postal and courier pathways, how to identify and respond to non-compliance, and the importance of monitoring regulated articles moving on postal and courier pathways
- includes a diagram of a typical e-commerce supply chain
- several country case studies
