

United States Department of Agriculture

Animal and Plant Health Inspection Service

Plant Protection and Quarantine

Regulation and Clearance from Hawaii to Other Parts of the United States

The U.S. Department of Agriculture (USDA) prohibits discrimination in all its programs and activities on the basis of race, color, national origin, age, disability, and where applicable, sex, marital status, familial status, parental status, religion, sexual orientation, genetic information, political beliefs, reprisal, or because all or part of an individual's income is derived from any public assistance program. (Not all prohibited bases apply to all programs.) Persons with disabilities who require alternative means for communication of program information (Braille, large print, audiotape, etc.) should contact USDA's TARGET Center at (202) 720-2600 (voice and TDD). To file a complaint of discrimination, write to USDA, Director, Office of Civil Rights, 1400 Independence Avenue, S.W., Washington, D.C. 20250-9410, or call (800) 795-3272 (voice) or (202) 720-6382 (TDD). USDA is an equal opportunity provider and employer.

Mention of companies or commercial products does not imply recommendation or endorsement by the U.S. Department of Agriculture over others not mentioned. USDA neither guarantees nor warrants the standard of any product mentioned. Product names are mentioned solely to report factually on available data and to provide specific information.

This publication reports research involving pesticides. All uses of pesticides must be registered by appropriate State and/or Federal agencies before they can be recommended.

CAUTION: Pesticides can be injurious to humans, domestic animals, desirable plants, fish, or other wildlife—if they are not handled or applied properly. Use all pesticides selectively and carefully. Follow recommended practices for the disposal of surplus pesticides and pesticide containers.

Introduction

Contents

Purpose1-1Scope1-1Users1-2Related Documents1-2Conventions1-2Using the Manual1-6

Purpose

The *Hawaii Manual* covers information from both domestic quarantine notices (7CFR Part 301) and Hawaiian and territorial quarantine notices (7CFR Part 318). The reason for combining this information is to provide officers with regulatory information in one manual.

To become familiar with this manual, read this section to learn what is and what is not covered. Once you know that an item is covered in this manual, turn to the **Reference Section** to determine what restrictions or prohibitions to apply. Read **Methods and Procedures** to learn what is involved in clearing cargo and mail.

If a commodity requires a special procedure, you will be referred to the page which contains the detailed information. These entries will be listed with "page ____" after the approved commodity.

Scope

If a fresh fruit, herb, or vegetable is listed, it is admissible (although it may have to meet additional conditions for entry). If an item is **not** listed, it's **prohibited**. Use the Index if you have any trouble finding items in the **Reference Section**.

This manual also covers clearance procedures for aircraft, baggage, cargo, mail, and vessels, and the movement of regulated items from Hawaii to other parts of the United States and territories.

Movement of plant pests is **not** covered. To find this information, refer to 7 CFR 330.200–214.

Rice Straw, page 3-11
Sand, Soil, and Earth, page 3-11
Seed and Nuts, page 3-12
Sugarcane, page 3-13

Users

The *Hawaii Manual* is written for use by regulatory officers who work in airport and maritime locations in Hawaii.

Related Documents

Enabling legislation provides the authority to carry out the mission of protecting American agriculture from plant pests. Legislative acts are the fundamental authority granted by Congress to the Secretary of Agriculture to promulgate regulations to protect American agriculture. The regulatory authority for taking the actions listed in this manual is contained in *The Plant Protection Act* (PPA). The PPA provides the authority to prohibit or restrict imports, exports, or interstate movement of plant pests, plants, plant products, noxious weeds, biological control agents, and means of conveyance.

Code of Federal Regulations

The Code of Federal Regulations (CFRs) provide the authority for the regulatory action taken and are enforced by CBP and PPQ. The restrictions and prohibitions listed in this manual are covered by the 7CFR 301, 318, and, 330.

Conventions

Conventions are established by custom and are widely recognized and accepted. Major conventions used in this manual follow.

Advisories

Advisories are used throughout the *Fruits and Vegetables Import Manual* to bring important information to your attention. Please carefully review each advisory. The definitions coincide with American National Standards Institute (ANSI), and are in the format shown below.

DANGEROUS indicates that people could easily be hurt or killed.

WARNING indicates that people could possibly be hurt or killed.

CAUTION indicates that people could possibly be endangered and slightly hurt.

NOTICE indicates a possibly dangerous situation where goods might be damaged.

IMPORTANT indicates helpful information.

Boldface

Boldface type is used to emphasize important words throughout this manual. These words include: **do not, except, must, never, not, only, other than**.

Bullets

Bulleted lists indicate that there is no order to the information listed.

Chapters

This manual contains the following chapters: *Introduction, Methods and Procedures, Reference,* and *Index*.

Contents

Every chapter has a table of contents that lists the heading titles within.

Control Data

Control data is located at the top and bottom of each page to help users keep track of where they are in the manual and be aware of updates to specific chapters, sections, appendixes, etc., in the manual. At the top of the page is the chapter title and first-level heading for that page. At the bottom of the page is the transmittal number (month, year, number), manual title, page number, and unit responsible for content. To track revisions, use the Control Data.

Decision Tables

Decision tables are used throughout the manual. The first and middle columns in each table represent conditions, and the last column represents the action to take after all conditions listed for that row are considered. Begin with the column headings and move left-to-right, and if the condition does not apply, then continue one row at a time until you find the condition that does apply.

Table 1-1 How to Use Decision Tables

lf you:	And if the condition applies:	Then:
Read this column cell and row first	Continue in this cell	TAKE the action listed in this cell
Find the previous condition did not apply, then read this column cell	Continue in this cell	TAKE the action listed in this cell

Examples

Examples are used to clarify a point by applying it to a real-world situation. Examples always appear in boxes as a means of visually separating them from the other information contained on the page.

EXAMPLE	Examples are graphically placed boxes within the text as a means of visually separating information from other information contained on the page.
	Examples will always appear in a box.

Footnotes

Footnotes comment on or cite a reference to text and are referenced by number. The footnotes used in this manual include general text footnotes, figure footnotes, and table footnotes.

General text footnotes are located at the bottom of the page.,

When space allows, figure and table footnotes are located directly below the associated figure or table. However, for multi-page tables or tables that cover the length of a page, footnote numbers and footnote text cannot be listed on the same page. If a table or figure continues beyond one page, the associated footnotes will appear on the page following the end of the figure or table.

Heading Levels

Within each chapter and section there are four heading levels. The first-level heading is indicated by a horizontal line across both left and right columns and the heading follows directly below in the right column. The second-level heading is smaller than the fist-level heading and is in the right-hand column with the text beginning below. The third-level heading is smaller than the second-level heading and is in the right-hand column with the text beginning below. The third-level heading is smaller than the second-level heading and is in the right-hand column with the text beginning below. The fourth-level heading is in the right-hand column followed by a period and leading into the text.

Hypertext Links (Highlighting) to Tables, Figures, and Headings

Figures, headings, and tables are cross-referenced in the body of the manual and are highlighted in boldface type. These appear in blue hypertext in the on-line manual.

EXAMPLE	Refer to Table 1-2 in the Introduction to determine where to report problems		
	with this manual.		

Indentions

Entry requirements which are summarized from CFRs, import permits, or policies are indented on the page.

Italics

The following items are italicized throughout the Hawaii Manual:

- Cross-references to headings
- Publication names
- Scientific names of commodities

Numbering Scheme

A two-level numbering scheme is used in this manual for pages, tables, and figures. The first number represents the chapter. The second number represented the page, table, or figure. This numbering scheme allows for easier updating and adding pages without having to reprint an entire chapter. Dashes are used in page numbering to differentiate page numbers from decimal points.

Transmittal Number

The transmittal number contains the month, year, and a consecutively-issued number (beginning with -01 for the first edition and increasing consecutively for each update to the edition). The transmittal number is only changed when the specific chapter sections, appendixes, or glossary, tables, or index is

updated. If no changes are made, then the transmittal number remains the unchanged. The transmittal number only changes for the entire manual when a new edition is issued or changes are made to the entire manual.

EXAMPLE	12/2009-14 is the transmittal number for this update and is located in the control data on the pages in this chapter.		
	12 is the month the update was issued 2009 is the year the update was issued 14 is the number (the original new edition was 01 plus 13 updates)		

Using the Manual

Review the contents of this manual to get a feel for the scope of material covered. Glance through the section that you will be using, and familiarize yourself with the organization of the information. Use the table of contents which follows each tab to find the information you need. If the table of contents is not specific enough, then turn to the index to find the topic and corresponding page number.

Reporting Problems with or Suggestions for the Manual

Use Table 1-2 to determine where to report problems with the *Hawaii Manual*.

lf you:	Then:
Are unable to access the on-line manual	CONTACT PPQ's Manuals Unit by email <josie.cooley@aphis.usda.gov> or call 240-529-0358.</josie.cooley@aphis.usda.gov>
Have a situation that requires an immediate response regarding a procedure or regulatory action	CONTACT Quarantine Policy, Analysis, and Support through proper channels with the reason for the disagreement and a recommendation
Have a suggestion for improving the formatting of the content (design, layout, composition), grammar, or spelling	CONTACT PPQ's Manuals Unit by email <josie.cooley@aphis.usda.gov>, phone 240-529-0358, or print, complete, and mail a <i>Comment Sheet</i> (located at the end of the manual) to PPQ's Manuals Unit</josie.cooley@aphis.usda.gov>
Disagree with the admissibility of a commodity	CONTACT PPQ's Regulatory, Permits, and Manuals department through proper channels.
Disagree with policy or procedures	CONTACT Quarantine Policy, Analysis, and Support through proper channels with the reason for the disagreement and a recommendation

Table 1-2 Where To Report Problems with the F&V Manual

Manual Updates

The PPQ Manuals Unit issues and maintains manuals electronically on the Manuals Unit Web site. The on-line manuals contain the most up-to-date information. Immediate update revisions to the manual are issued and distributed via e-mail to all PPQ employees.

Each immediate update contains the following information:

- Link to access and download the on-line manual
- List of the revised page numbers
- Purpose of the revision(s)
- Transmittal number

Ordering Additional Manuals and Revisions

Although using the on-line manuals is the preferred method, APHIS employees may order hard copies of manuals from the APHIS Printing, Distribution, and Mail Services Center in Riverdale, Maryland. Visit the Riverdale Print Shop Web site for detailed information and printing costs. The Manuals Unit is not responsible for printing costs.

Methods and Procedures

Contents

Introduction 2-1 Inspection of Cargo 2-1 Inspection of Baggage Carried Aboard Aircraft **2-2**Inspection of Vessels 2-4 Special Procedures—Conditions for Moving Cucumbers, Long Eggplants, and Tomatoes from Hawaii to Alaska 2-5

Introduction

This section provides information on the methods and procedures which are unique to Hawaii. Information in this section covers clearance procedures and is organized as follows:

- Cargo
- Baggage
- Aircraft
- Vessels

Inspection of Cargo

Application for Inspection

Shippers may request inspection (or certification) by contacting the nearest PPQ office.

When and Where to Inspect

Inspect all regulated cargo prior to departure from Hawaii. Review outbound manifests and air waybills for regulated items destined to other parts of the United States. With the assistance of pier or airline shipping clerks, screen cargo at loading time to prevent the movement of unauthorized articles (check the Reference Section of this manual for any restrictions or prohibitions) and to ensure that all certification requirements are met. Movement of unauthorized and prohibited articles may be authorized by a PPQ Transit Permit.

How to Inspect

The procedures for inspection are straightforward. Assuming that you already have the cargo documents, use the following steps.

Step 1 Check the Reference Section

Check the Reference Section of this manual for any restrictions or prohibitions. In the case of fresh fruits, herbs, or vegetables, check to ensure that the fruit or vegetable is listed as being approved. Apply any restrictions that are listed in the Reference Section (example—treatments that are required). For items which require a mandatory treatment—skip Step 2 and go to Step 3.

Step 2 Inspect the Regulated Items

Inspect the restricted item using the same inspection techniques and methods that you would use for inspecting items of foreign origin. If the shipment is found to have plant pests of quarantine significance, then require treatment or prohibit movement.

Step 3 Document the Action Taken

Stamp or write the action taken on the accompanying paperwork (examples—invoices, air waybills, bills of lading). Documenting the action taken can serve as one way of certifying shipments. Stamp the shipping documents with the appropriate "Release."

Inspection of Baggage Carried Aboard Aircraft

Step 1 Examine Carry–on Baggage

In general, examine all carry–on baggage for unauthorized articles (check the Reference Section of this manual for any restrictions or prohibitions and pests). The baggage of both passengers and airline crew is subject to inspection¹.

Step 2 Question Travelers

Thoroughly question the travelers. Ask travelers their destination and itinerary. Use their answers to your questions, what you found in the carry–on baggage, and your knowledge of what fruits and vegetables are in season to determine the thoroughness of your inspection of the pit baggage.

¹ If inspecting the baggage or personal effects of persons possessing a diplomatic passport with an A1/A2 Visa or G1/G2 Visa, use the guidelines found in the Manual for Agricultural Clearance.

Step 3 Waive Inspection of Pit Baggage

Table 2-1 Deciding Whether to Waive Inspection of Pit Baggage

If the date falls between:	And the tour group is destined to a State with:	And the tour director:	Then:
November and March	Severe winters	Agrees to distribute information on preflight inspection	WAIVE the inspection of the pit baggage
		Disagrees to distribute information on preflight inspection	Selectively INSPECT the pit baggage
	Mild or no winters		
April and October			

Inspection of Aircraft

Predeparture Inspection and Clearance

Aircraft leaving Hawaii for destinations in the contiguous United States, Puerto Rico, or the U.S. Virgin Islands are to be inspected prior to departure. When inspecting departing aircraft, use the following steps.

Step 1 Prevent Loading Prior to Inspection

Do **not** allow baggage, cargo, commissary supplies, or other articles to be loaded prior to inspection.

Step 2 Check Certification

Make sure that all regulated articles (check the **Reference Section** of this manual for any restrictions or prohibitions) loaded on the aircraft have been appropriately certified. Have unauthorized articles unloaded.

Step 3 Inspect Aircraft

Carefully inspect the aircraft for quarantine significant pests. If you find pests that warrant action, treat all interior parts of the aircraft (see the PPQ Treatment Manual for directions).

Step 4 Inspect Articles Taken Aboard Aircraft

Inspect articles to be taken aboard the aircraft for quarantine significant pests. If you find pests that warrant action, see that they are treated (see the PPQ Treatment Manual) or **do not allow** the infested article to go forward.

Step 5 Waive Inspection of Aircraft

Table 2-2 Deciding Whether to Waive Inspection of Aircraft

If a:	And:	Then:
Transiting aircraft arriving from a	The transit time is less than 90 minutes	DO NOT REBOARD to inspect
foreign location	The transit time is 90 minutes or more	REBOARD AND INSPECT aircraft
Quick turnaround aircraft from the	The aircraft will depart in less than 90 minutes after arrival	WAIVE the inspection of the aircraft
mainland	The aircraft will depart in 90 minutes or more after arrival	INSPECT the aircraft

Inspection of Vessels

These procedures for inspecting vessels flying between Hawaii and other parts of the United States were developed for California ports and are to serve as guidelines for other ports. If you are at **other than** a California port and are **not** staffed or organized so as to be able to adopt these procedures in their entirety, then modify your operation accordingly. Modifications must be made within the limits prescribed by pest risk.

Step 1 Set Place and Time of Boarding

Vessels from Hawaii must be boarded at the first port of arrival. Board between the hours of sunrise and sunset unless advance arrangements have been made and adequate facilities are available for night boarding. If the vessel arrives after sunset and night boarding is impracticable, then the vessel may remain in quarantine until sunrise the following morning. If a vessel arrives in distress, use your professional judgement to set the time and place of boarding.

Step 2 Examine Stores and Quarters on Cargo Vessel

Upon boarding a cargo vessel, notify a responsible ship's officer of your presence. Then immediately examine the storerooms, crew's quarters, and any other compartment on the vessel where fruits and vegetables may be carried. Seal or seize any prohibited articles (check the **Reference Section** of this manual for any restrictions or prohibitions)² found. If you find fruits and vegetables that were grown and harvested on the mainland, then use this decision table:

² Prohibited articles include all fruits and vegetables of Hawaiian origin which are not certified or certifiable. Also prohibited are fruits and vegetables of mainland origin that were purchased in Hawaii and are in opened or non commercially packaged cases.

If: And: Then: In unopened, ALLOW the produce to remain on board in place of destruction commercially packaged cases Found in ships' You are satisfied that it was taken ALLOW the produce to remain in aboard at a mainland port and has not open stores or in quarters stores, or small lots in crew's quarters or been off the vessel cabins You are **not** satisfied of the conditions SEAL or SEIZE the produce identified in the cell above

 Table 2-3 Deciding Action to Take on Produce from Mainland U.S.

Step 3 Disinfect Vessel

If the vessel is infested, infected, or contaminated with any plant pest designated in 7CFR 318.13(a), then supervise the disinfection of the vessel.

Step 4 Notify of Clearance

Notify the responsible ship's officer concerning your clearance of the vessel and authorize docking, disembarking, and unloading.

Special Procedures—Conditions for Moving Cucumbers, Long Eggplants, and Tomatoes from Hawaii to Alaska

The following conditions must be met when moving cucumbers, long eggplants, and tomatoes from Hawaii to Alaska.

- 1. The shipment must be consigned to a distributor in Alaska who has signed a Compliance Agreement (PPQ Form 519). The distributor must agree to sell or distribute the fruits or vegetables only for restaurant use in Alaska.
- **2.** A Limited Permit (PPQ Form 530) must be issued by PPQ in Hawaii for each shipment.
- **3.** Approved distributors must maintain sales records to verify compliance with the above requirements.

Contents

Fruits, Herbs, and Vegetables

Fresh fruits, herbs, and vegetables are restricted to prevent the spread of fruit flies, bean pod borers (*Maruca testulalis*), and pink bollworm (*Pectinophora gossypiella*). **Table 3-1** contains a list of items which are approved for movement to other parts of the United States, including Guam and the Commonwealth of the Northern Mariana Islands. Prohibit the movement of all items that are not listed. Refer to **Table 3-6** for a list of fruits, herbs, and vegetables approved for movement from Hawaii to Alaska.

Approved fruits and vegetables must be inspected and certified free from all life stages of light brown apple moth (LBAM) before authorizing interstate movement per Federal Domestic Quarantine Order DA-2008-17. Refer to the Exempted Host List for a listing of fruits and vegetables exempt from the requirements for inspection for LBAM.

1 Must be irradiated at an apr			

1 Must be irradiated at an approved facility in Hawaii

- 2 Sagittaria sagittifolia—PROHIBIT MOVEMENT unless the importer has a valid PPQ Form 526 Permit. This noxious weed is prohibited by 7CFR 360-Noxious Weed Regulations
- 3 Treatment may be waived if the bananas are green and free from pests. However, bananas to be treated with T105-a-1 (150 Gy) must be sampled and inspected (after the sampled bananas have been removed from the stalk) for the presence of green scale, *Coccus viridis*, and banana moth, *Opogona sacchari*. If green scale or moth (eggs or larvae only) are found, refuse to certify for movement or require T105-a-2 (400 Gy). If adults or pupae of the moth are found, refuse to certify. "Cultivars'Williams,"Valery," Grand Mainland standard and dwarf 'Brazilian' may be moved interstate from Hawaii after meeting the conditions of 7CFR318.4i(a). However, irradiated bananas do not have to meet these varietal restrictions. Inspect plantains, cooking bananas, and bananas which differ from the usual bananas of commerce for internal feeders (fruit flies).
- 4 Fruit must be free from stems and leaves and must originate from an orchard previously treated with a fungicide appropriate for the fungus *Phytophthora tropicalis* or after irradiation, a post harvest fungical dip may be used.
- 5 Inspect for spiraling whitefly (Aleurodicus dispersus), inornate scale (Aonidiella inornata), red wax scale (Ceroplastes rubens), green scale (Coccus viridis), gray pineapple mealybug (Dysmicoccus neobrevipes), pink hibiscus mealybug (Maconellicoccus hirsutus), spherical mealybug (Nipaecoccus viridis), citrus mealybug (Pseudococcus cryptus), melon thrips (Thrips palmi) and signs of thrip damage. If the any of these pests are found, prohibit entry or treat with 400 Gy (T105-a-2). Fruit receiving the 150 gray treatment must also either receive a post-harvest dip in accordance with treatment schedule T102-c as provided in 305.42(b) or originate from an orchard or growing area previously treated with a broad spectrum insecticide during the growing season, inspected and found free of any surface pests as prescribed in a compliance agreement.
- 6 Must be irradiated at an approved facility in Hawaii or in the mainland U.S. Certified facilities may be located in any state except Alabama, Arizona, California, Florida, Georgia (with exception of Atlanta Hartsfield Airport), Kentucky, Louisiana, Mississippi (with exception of maritime port of Gulfport MS), Nevada, New Mexico, North Carolina (with exception of maritime port at Wilmington), South Carolina, Tennessee, Texas and Virginia.
- 7 Inspect for freedom from the spherical mealybug (Nipaecoccus viridis) and a tuckerellid mite, (Tuckerella ornata).
- 8 Inspect for cassava red mite (*Oligonychus biharensis*) and adults and pupae of the order Lepidoptera before undergoing irradiation treatment. The pods must be free of stems and leaves. If infested with these pests or stems and leaves, REFUSE to certify.
- 9 For fruit presented for inspection, ensure that the sepals were removed and that the fruits are free from leaves and stems. Also inspect for the gray pineapple mealybug (*Dysmicoccus neobrevipes*), pink hibiscus mealybug (*Maconellicoccus hirsutus*), and citrus mealybug (*Pseudococcus cryptus*) before undergoing irradiation treatment at the 150 gray dose. Fruit receiving the 150 gray dose also must either receive a post-harvest dip in accordance with treatment schedule T102-c or originate from an orchard or growing area that was previously treated with a broad-spectrum insecticide during the growing season and a pre-harvest inspection of the orchard or growing area found the fruit free of any surface pests as prescribed in a compliance agreement. If infested with these pests, REFUSE to certify or treat with 400 Gy (T105-a-2). If you find stems and leaves, RE-FUSE to certify.
- 10 Consignment must be free from leaves and stems. If you find stems or leaves, REFUSE to certify.
- 11 Limited to *Calendula* spp. (pot marigold), *Tagetes* spp. (marigold), *Tropaeolum* spp. (nasturtium), and *Viola* spp. (john-ny-jump-ups, pansies, and violets).
- 12 Each shipment must be inspected in Hawaii and found free of the red spider mite (*Eutetranychus orientalis*) and the cassava red mite (*Oligonychus biharensis*).
- 13 If, after inspection, ginger maggot (*Eumerus figurans*) or banana moth (*Opogona sacchari*) are found, treatment with irradiation at 400 Gy (T105-a-2) is REQUIRED.
- 14 May **not** be moved interstate into Florida. All cartons in which litchi or longan are packed must be stamped "Not for importation into or distribution in FL."

- 15 Fruit presented for inspection must have the sepals removed in order to conduct the inspection. Sepals are allowed for those fruit **not** being inspected. Consignment must be free from leaves and stems. If you find stems or leaves, REFUSE to certify. Inspect for the gray pineapple mealybug (*Dysmicoccus neobrevipes*), pink hibiscus mealybug (*Maconellicoccus hirsutus*), citrus mealybug (*Pseudococcus cryptus*), and *Thrips florum* before undergoing irradiation treatment in Hawaii at the 150 gray dose. If infested with these pests, REFUSE to certify or treat with 400 Gy (T105-a-2). Fruit receiving the 150 gray dose also must either receive a post-harvest dip in accordance with treatment schedule T102-c as provided or originate from an orchard or growing area that was previously treated with a broad-spectrum insecticide during the growing season and a pre-harvest inspection of the orchard or growing area found the fruit free of any surface pests as prescribed in a compliance agreement. Post-treatment inspection in Hawaii is not required if the fruit undergoes irradiation treatment at the 400 gray dose.
- 16 Consignment must be free from leaves and stems. If you find stems or leaves, REFUSE to certify.
- 17 Post-treatment inspection is not required if the fruit undergoes irradiation treatment at the 400 gray dose. Melons must be washed to remove dirt and must be free from leaves and stems. If the melons receive the the 150 gray dose, inspect the consignment for spiraling whitefly (*Aleurodicus dispersus*) before undergoing irradiation treatment at the 150 gray dose. If infested with these the spiraling whitefly, REFUSE to certify or treat with 400 Gy (T105-a-2). Fruit receiving the 150 gray dose also must either receive a post-harvest dip in accordance with treatment schedule T102-c or originate from an orchard or growing area that was previously treated with a broad-spectrum insecticide during the growing season and a pre-harvest inspection of the orchard or growing area found the fruit free of any surface pests as prescribed in a compliance agreement. post-treatment inspection in Hawaii is not required if the fruit undergoes irradiation treatment at the 400 gray dose. Regardless of irradiation dose, melons must be washed to remove dirt and must be free of stems and leaves.
- 18 Post-treatment inspection in Hawaii is **not** required if the fruit undergoes irradiation treatment as the 400 gray dose. If the fruit receives the 150 gray dose, inspect the consignment for spiraling whitefly (*Aleurodicus dispersus*), inornate scale (*Aoni-diella inornata*), green scale (Coccus viridis), and citrus mealybug (*Pseudococcus cryptus*) before undergoing irradiation at the 150 gray dose. If infested with these pests, REFUSE to certify or treat with 400 Gy (T105-a-2). Fruit receiving the 150 gray dose also must either receive a post-harvest dip in accordance with treatment schedule T102-c as provided in § 305.42(b) or originate from an orchard or growing area that was previously treated with a broad-spectrum insecticide during the growing season and a pre-harvest inspection of the orchard or growing area found the fruit free of any surface pests as prescribed in a compliance agreement. Post-treatment inspection in Hawaii is not required if the fruit undergoes irradiation treatment at the 400 gray dose.
- 19 Inspect for gray pineapple mealybug (*Dysmicoccus neobrevipes*), kona coffee-root knot nematode (*Meliodogyne konaensis*). Per the conditions of 7CFR 305.34(b)(7), sweet potatoes must be sampled, cut and inspected in Hawaii and found free of ginger weevil (*Elytrotreinus subtruncatus*) before undergoing treatment in Hawaii. Reject or treat with 400 Gy (T105-a-2) if the mealybug or ginger weevil is found. Reject shipment if the nematode is found.
- 20 Vapor heat treatment may be used if the conditions of 7CFR 318.13-4(d) have been met. Sweet potato must be sampled, cut and inspected and found free of ginger weevil (*Elytrotreinus subtruncatus*), gray pineapple mealybug (*Dysmicoccus neobrevipes*), kona coffee-root knot nematode (*Meliodogyne konaensis*) before undergoing treatment.
- 21 Tomatoes must meet the conditions listed in 7CFR 318.13-4c.

Processed Fruits, Herbs, and Vegetables

Processing should render the fruits, herbs, or vegetable incapable of harboring live fruit flies. The fruit, herb, or vegetable is restricted only if they are insufficiently processed. Movement is restricted from Hawaii to other parts of the United States, including Guam and the Commonwealth of the Northern Mariana Islands

Three types of processing are covered in this section:

- Dried or Cured—Table 3-2
- Frozen—Table 3-3
- ◆ Diced, Sectioned, Segmented, Sliced or Precut—Table 3-4
- ◆ Juiced, Pureed, Concentrated, Pickled, Jellied—Table 3-5

Table 3-2 Dried or Cured Fruits, Herbs, and Vegetables

If the product is:	Then:	Authority:
Capable of harboring fruit flies or other plant pests	USE the Fresh Fruits, Herbs, and Vegetables section in this Reference. Regulate the product as if fresh.	7CFR 318.13 7CFR 330.105
Incapable of harboring fruit flies	INSPECT AND RELEASE

Miscellaneous Processed Products

This section includes regulatory decision tables for regulating miscellaneous processed products including, cotton, packing material, seeds and nuts, and sugarcane.

Cotton

Cotton plant parts and products are regulated to prevent the spread of pink bollworm (*Pectinophora gossypiella*). Movement is restricted from Hawaii to other parts of the United States, excluding Guam and the Commonwealth of the Northern Mariana Islands.

If the item is:	And:	And it is:	Then:	Authority:
Cotton wax, cottonseed oil, or manufactured cotton			CERTIFY SHIPMENT	7CFR 318.47
Bale covers or wrappings; cottonseed hulls, cake, or meal; lint; linters; seedy waste;	Fumigated in accordance with the appropriate schedule in T301			
or waste	Not fumigated as in the cell above	Samples of—lint, linters, waste (seed free), cotton-seed hulls, cake, or meal	 INSPECT AND CERTIFY shipment at origin, or 	
			 INSPECT at the port of arrival 	
		Not a sample nor as above	USE Table 3-8	
Seed		•	SEE entry on Seed And Nuts	
Other than one listed in the three cells above			PROHIBIT MOVEMENT	

If the item is:	And it is:	Then:	Authority:
Cottonseed hulls, lint, linters, seedy waste, or waste	Processed sufficiently to eliminate pests	 INSPECT the shipment at origin, then CERTIFY shipment 	7CFR 318.47
	Not processed as described in cell above	 REQUIRE a Riverdale issued permit, then ALLOW movement to port 	-
Bale covers or wrappings	Used	designated on the permit, then3. HANDLE as foreign origin cotton at the port of arrival (follow directions in MCFR 319.8)	
	New or unused	RELEASE	
Cottonseed cake or		REQUIRE either of the following:	
meal		 INSPECT AND CERTIFY at origin, or 	
		 REQUIRE a Riverdale issued permit and inspect at port of arrival 	

 Table 3-8
 Unfumigated cotton products

Cut Flowers and Leis

Some species of cut flowers and foliage are prohibited movement from Hawaii to other parts of the United States, including Guam and the Commonwealth of the Northern Mariana Islands, because they are host to the following pests:

- Bean pod borer (*Maruca testulalis*), and the bean butterfly (*Lampides boeticus*), pests of Mauna–loa and jade vine
- Green scale (*Coccus viridis*), a pest of gardenia and cape jasmine

Cut flowers and leis that are hosts to the Asian Citrus Psyllid (ACP) must meet the conditions of 7 CFR 301.76.

All regulated cut flowers and leis not otherwise prohibited by regulation are required to be inspected and certified free from all life stages of light brown apple moth (LBAM) before authorizing interstate movement per Federal Domestic Quarantine Order DA-2008-17.

Table 3-9 Cut Flowers and Leis

If the flowers are:			Then:	Authority:
<i>Canavalia cathartica</i> (Mauna-loa) or <i>Strongylodon lucidus</i> (jade vine)		►	PROHIBIT MOVEMENT	7CFR318.13 7CFR330.105
Cut flowers, decorative branches, or leis constructed from hosts of the Asian citrus psyllid (<i>Diaphorina citri</i>) ¹			 REQUIRE T101-n-2 or T105-a-2² and meet the conditions of 7 CFR 301.76, then CERTIFY shipment 	
<i>Gardenia</i> spp. (gardenia or cape jasmine)	From an approved grower	Inspected and found free from green scale or any other significant pests	CERTIFY the shipment based on monitoring and the absence of pests	
		Inspected and found infested with green scale or any other significant pests	PROHIBIT MOVEMENT	
	Not from an approved grower			
<i>Rosa</i> spp. (rose)		Monitored and found free of spiny orange whiteflies or any other significant pests	CERTIFY the shipment based on monitoring and the absence of pests	1
	>	Monitored and found infested with spiny orange whiteflies or any other significant pests	PROHIBIT MOVEMENT	4

- 1 Aegle marmelos (bael, Bengal quince), Aeglopsis chevalieri (Chevalier's aeglopsis), Afraegle gabonensis (Gabon powder-flask), Afraegle paniculata (Nigerian powder-flask), Atalantia sp. (atalantia), Balsamocitrus dawei (Uganda powder-flask), Bergera koenigii (curry-leaf), Calodendrum capensis (Cape chestnut), X Citroncirus webberi (citrange), X Citrofortunella microcarpa (calamondin), Citropsis gilletiana (Gillet's cherry-orange), Citropsis schweinfurthii (African cherry-orange), Citrus spp. (sweet orange, mandarin orange, sour orange, lemon, grapefrui, tangerine, pomelo, etc.), Clausena excavata (clausena), Clausena indica (clausena), Clausena lansium (wampee, wampi), Clausena anisum-olens (anis), Eremocitrus hybrid (desert-lime), Eremocitrus glauca (Australian desert-lime), Fortunella spp. (kumquat), Limonia acidissima (Indian wood-apple), Merrillia caloxylon (flowering merrillia), X Microcitronella 'Sydney' (faustrimedin), Microcitrus papuana (desert-lime), Microcitrus australasica (finger-lime), Microcitrus australis (Australian round-lime), Murraya paniculata (orange jasmine), Naringi crenulata (naringi), Pamburus missionis (pamburus), Poncirus trifoliata (trifoliate orange), Severinia buxifolia (Chinese box-orange), Swinglea glutinosa (tabog), Toddalia asiatica (orange-climber), Toddalia lanceolata (toddalia), Triphasia trifolia (trifoliate lime-berry), Vepris lanceolata (white ironwood, wild-lime), or Zanthoxylum fagara (lime prickly-ash)
- 2 Must be irradiated at an approved facility in Hawaii

Packing Material

If used as packing material for:	And packing material is:	Then:
Propagative material		GO to the list of approved growing media in the "Plants for Propagation"section of this manual
Other than propagative material	Bagasse, plant litter, rice straw, soil, or unmanufactured cotton	ALLOW authorized material to move only after the packing material is removed
	Other than above	ALLOW MOVEMENT

Rice Straw

Rice straw is prohibited to prevent the spread of Asiatic rice borer (*Chilo suppressalis*). Movement is prohibited from Hawaii to other parts of the United States, including Guam and the Commonwealth of the Northern Mariana Islands.

Table 3-11 Rice Straw

lf:	Then:	Authority:
Rice Straw	PROHIBIT MOVEMENT	7CFR 318.13

Sand, Soil, and Earth

Soil is restricted to prevent the spread of soil borne diseases and insects. Movement is restricted from Hawaii to other parts of the United States, including Guam and the Commonwealth of the Northern Mariana Islands.

Table 3-12 Sand¹, Soil, And Earth

If the shipment is:	And:	Then:	Authority:
More than 3 pounds		REQUIRE movement to a lab ² listed as approved to receive foreign soil ³	7CFR 330.300
Three pounds or less	Treatment is practical and will not interfere with intended use	 ISSUE an oral permit, then TREAT soil according to Table 3-13 	
	Treatment is impracticable	REQUIRE movement to a lab ² listed as approved to receive foreign soil ³	

1 Clean ocean sand is unrestricted

2 Found in Laboratories Approved to Receive Soil

3 Lab directors wishing approval to receive soil from Hawaii should complete PPQ Form 525, *Application and Permit to Move Soil*

Dry Heat		Steam Heat
Temperature:	Exposure time:1	Use steam heat for packages of soil which are
♦ 230–249°F	♦ 16 hours	5 pounds or less in weight. If soil is in trays, make sure the depth does not exceed 2
♦ 250–309°F	♦ 2 hours	inches.
♦ 310–379°F	♦ 30 minutes	Require 15 pounds of pressure for 30
♦ 380–429°F	♦ 4 minutes	minutes. Start counting time once the pressure reaches 15 pounds.
♦ 430–450°F	2 minutes	process is a pounder

Table 3-13 Approved Heat Treatments for Sand, Soil, or Earth

1 Start counting time once the entire mass reaches the required temperature

Seeds and Nuts

The seed of cotton must be treated because it can harbor pink bollworm (*Pectinophora gossypiella*). Seeds with pulp are prohibited because pulp can harbor fruit flies. Sugarcane seed is restricted because it can transmit diseases like gummosis disease (*Xanthomonas vasculorum*) and leaf scald disease (*Xanthomonas albilineans*). Mango seed is prohibited because it can harbor the mango seed weevil (*Sternochetus mangiferae*). Movement of these seed is restricted from Hawaii to other parts of the United States, including Guam and the Commonwealth of the Northern Mariana Islands for cotton and pulpy seed, but excluding Guam and the Commonwealth of the Northern Mariana Islands for sugarcane.

If the seed or nut is:	And:	Then:	Authority:
Cotton	Seed cotton	1. REQUIRE 301-a-4, then	7CFR 318.47
	Cottonseed	2. CERTIFY shipment	
Mango		PROHIBIT MOVEMENT (it is also prohibited into Guam	7CFR 318.13
Pulpy seed	Capable of harboring fruit flies	and CNMI	
	Incapable of harboring fruit flies	INSPECT AND RELEASE	7CFR 330.105
Sugarcane	Moving to CNMI or Guam	INSPECT AND RELEASE	
	Moving to other than	1. REQUIRE T514-2, then	7CFR 301.87
	CNMI or Guam	2. CERTIFY shipment	
Other than one listed in the five cells above		INSPECT AND RELEASE	7CFR 330.105

Table 3-14 Seed And Nuts

Sugarcane

Sugarcane is restricted to prevent the artificial spread of leaf scald disease (*Xanthomonas albilineans*) and gummosia disease (*Xanthomonas vasculorum*). Because the diseases are easily transmitted by any article that comes in contact with the sugarcane, machinery, or processing equipment used for extracting and refining sugarcane juice as well as plants, plant parts, products, and seed are regulated. Movement is restricted from Hawaii to other parts of the United States, excluding Guam and the Commonwealth of the Northern Mariana Islands.

If the item is:	And:	Then:	Authority:
Bagasse	Treated with dry heat for 2 hours at 158°F	CERTIFY shipment	7CFR 301.87
	Not treated as in cell above	USE Table 3-16	
Chews	Boiled for at least 30 minutes or peeled and without nodes	CERTIFY shipment	
	Not as described in cell above	USE Table 3-16	
Seed	>	GO to Seed And Nuts	
Equipment used for growing, harvesting, or processing	Free of all plant debris and soil	CERTIFY shipment	
sugarcane	Not as described in cell above	USE Table 3-16	
Other than bagasse, chews, or equipment		USE Table 3-17	

Table 3-15 Sugarcane

lf:	And it is:	And it is:	Then:	Authority:
Harvesting or processing equipment	Intended to be used for harvesting or processing sugarcane		PROHIBIT movement	7CFR 301.87
	Not intended to be used for harvesting or processing sugarcane		1. ISSUE a Limited Permit (PPQ Forms 530 or 537), then 2. ALLOW movement	
Bagasse or sugarcane chews	Moving to a county that grows sugarcane ¹		PROHIBIT movement	
	Moving to a county that does not grow sugarcane ¹	An area less than 10 miles from the nearest sugarcane field		
		An area 10 miles or more from the nearest sugarcane field	1. ISSUE a Limited Permit (PPQ Forms 530 or 537), then 2. ALLOW movement	

Table 3-16 Sugarcane—Issuing Limited Permits for Non certifiable Items

1 These are the sugarcane growing areas: Alabama, Georgia, Florida, Louisiana, Mississippi, Puerto Rico, Texas, and the U.S. Virgin Islands. If you are unsure whether a county grows sugarcane, then contact that State's Department of Agriculture.

Table 3-17 Sugarcane juice and other articles derived from s	sugarcane
--	-----------

lf:	And:	Then:	Authority:
Juice	Boiled for 10 minutes or more at 212°F	CERTIFY shipment	7CFR 301.87
	Not boiled for 10 minutes	REFUSE to certify	
Other than bagasse, chews, juice, or equipment	You are sure that there is no risk of spreading sugarcane diseases	CERTIFY shipment	
	You are unsure or there is the risk of spreading sugarcane diseases	CONTACT Quarantine Policy and Analysis (QPAS) through channels	

Plants for Propagation

Plants, as well as growing media, are restricted from Hawaii to prevent the spread of soil organisms, pink bollworm (*Pectinophora gossypiella*), sugarcane diseases (*Xanthomonas albilinenans* and *X. vasculorum*), cactus borer (*Cactoblastis cactorum*), the sweet potato scarabee (*Euscepes postfasciatus*), soybean rust (*Phakopsora pachyrhizi*), and the sweet potato stem borer (*Omphisa anastomosalis*). Movement is restricted to other parts of the United States, including Guam and the Commonwealth of the Northern Mariana Islands.

Care should be taken not to circumvent the certifications and requirements enforced by the State of Hawaii for interstate shipment of nursery stock. PPQ officers acting as official collaborators may participate in such certifications as appropriate.

Plants for propagation that are hosts to the Asian Citrus Psyllid (ACP) must meet the conditions of 7 CFR 301.76.

All regulated nursery stock except seed not otherwise prohibited by regulation are required to be inspected and certified free from all life stages of light brown apple moth (LBAM) before authorizing interstate movement per Federal Domestic Quarantine Order DA-2008-17.

 Table 3-18
 List of approved growing media:

Agar or other	Ground rubber	Quarry gravel	Vegetable fiber (free of
translucent	Organic and	Rock wool	pulp)
tissue culture media	inorganic fibers	Sawdust	includes: coconut
Baked expanded clay	Paper	Shavings—wood or cork	and osmunda
pellets	Peat	Sphagnum moss	excludes: cotton and
Buckwheat hulls	Perlite	Stockosorb	sugarcane
Clean ocean sand	Phenol formaldehyde	superabsorbent	Vermiculite
Coal cinder	Plastic particles	polymer	Volcanic rock
Coir	Polyethylene polymer	Tree fern slab (approved	Zeolite
Cork	stabilized cellulose	only for orchids)	
Crushed lava rock	Polymer stabilized	Ureaformaldehyde	
Excelsior	starch		
Glass wool	Polystyrene		
Ground peat	Polyurethane		

Plants in approved media must also meet these three conditions:

- 1. Media was not previously used for growing plants
- 2. Media was stored prior to use under adequate safeguards

3. Plants were grown in a manner to prevent infestation from soil contact. If potted plants are in contact with soil, then the soil shall be periodically treated with a suitable insecticide to the satisfaction of the PPQ officer

Table 3-19	Plants for Propagation—Plants moving to other parts of the United
	States

If the plant is:	And it is:	Then:	Authority:
Cactus	Moving to St. Croix, U.S. Virgin Islands (USVI)	INSPECT AND CERTIFY	7CFR 318.13
	Moving to other than St. Croix, USVI	PROHIBIT MOVEMENT	
Citrus ¹		Verify that the conditions of 7CFR 301.76 have been met, and CERTIFY shipment	7CFR 301.76
