# Seeds Not for Planting

The U.S. Department of Agriculture (USDA) prohibits discrimination in all its programs and activities on the basis of race, color, national origin, age, disability, and where applicable, sex, marital status, familial status, parental status, religion, sexual orientation, genetic information, political beliefs, reprisal, or because all or part of an individual's income is derived from any public assistance program. (Not all prohibited bases apply to all programs.) Persons with disabilities who require alternative means for communication of program information (Braille, large print, audiotape, etc.) should contact USDA's TARGET Center at (202) 720-2600 (voice and TDD). To file a complaint of discrimination, write to USDA, Director, Office of Civil Rights, 1400 Independence Avenue, S.W., Washington, D.C. 20250-9410, or call (800) 795-3272 (voice) or (202) 720-6382 (TDD). USDA is an equal opportunity provider and employer.

Mention of companies or commercial products does not imply recommendation or endorsement by the U.S. Department of Agriculture over others not mentioned. USDA neither guarantees nor warrants the standard of any product mentioned. Product names are mentioned solely to report factually on available data and to provide specific information.

This publication reports research involving pesticides. All uses of pesticides must be registered by appropriate State and/or Federal agencies before they can be recommended.

**CAUTION:** Pesticides can be injurious to humans, domestic animals, desirable plants, fish, or other wildlife—if they are not handled or applied properly. Use all pesticides selectively and carefully. Follow recommended practices for the disposal of surplus pesticides and pesticide containers.

### Purpose

The *Seeds **Not** for Planting Manual* provides the background, procedures and reference tables for regulating whole seeds (grain and nuts) when they are imported for purposes **other than** planting or growing, and for protecting plants that are threatened with extinction due to trade in those plants or their derivatives.

The seeds from the countries of origin listed in this manual are regulated because just one destructive pest might be enough to start an outbreak that can cause millions of dollars of damage to crops, trees, flowers, or lawns. By their destructiveness, pests can increase the price and reduce the quality of food, lower property values, and ruin recreational areas. The extinction of just one plant species does away with the aesthetic, ecological, educational, historical, recreational, commercial, and scientific value of our world.

## Scope

This manual is divided into the following chapters:

- ◆ *Introduction*
- ◆ *Procedures*
- ◆ *Reference*

The **Introduction** provides basic information about the manual. This chapter includes the purpose, scope, users, and application; directions for using the manual; and a description of conventions that are used throughout the manual.

The **Procedures** chapter provides the prerequisites and general directions for sampling, inspecting, and regulating seeds that are **not** used for planting; and the special procedures for authorizing the grinding of commodities contaminated with noxious weed seeds; and special procedures for regulating screenings.

The **Reference** chapter identifies the prohibitions and restrictions that apply to the admissibility of whole, unprocessed seeds and provides the authority for the regulatory action.

The appendixes contain supplementary information to assist the users.

The **Glossary** defines abbreviations, and acronyms, and specialized words that are used in regulating seeds that are **not** for planting.

The **Index** contains topics and page numbers for quick reference.

## What the Manual Covers

The *Seeds Not for Planting Manual* covers the following:

- ◆ Coconuts (*Cocos nucifera*) that are unhusked
- ◆ Macadamia nuts (*Macadamia* spp.) that are unhusked
- ◆ Nuts solely in their shell
- ◆ Seed for animal food<sup>1</sup>
- ◆ Seed for decoration, food, or industrial use (grain intended for special end-uses)
- ◆ Seed for sprouting (sprouting seeds)<sup>2</sup>
- ◆ Seed free from fleshy or leathery pulp
- ◆ Seed **not** processed beyond harvesting
- ◆ Seed screenings

## What the Manual Does Not Cover

The *Seeds **Not** for Planting Manual* **does not** cover the following items:

- ◆ Articles manufactured from plants or plant products (see the [Miscellaneous and Processed Products Manual](#))
- ◆ Fresh, cut portion of the plant including cut flowers and greenery intended for decoration (see the [Cut Flowers and Greenery Manual](#))
- ◆ Fresh and perishable seeds<sup>3</sup> (see the [Fruits and Vegetables Manual](#) and the [Fruits and Vegetables Import Requirements \(FAVIR\) On-line Database](#))
- ◆ Fresh fruit, herbs, or vegetables (see the [Fruits and Vegetables Manual](#) and the [Fruits and Vegetables Import Requirements \(FAVIR\) On-line Database](#))
- ◆ Nuts still in their husks **other than** coconuts (*Cocos nucifera*) and macadamia nuts (*Macadamia* spp.) (see [Fruits and Vegetables Manual](#) and the [Fruits and Vegetables Import Requirements \(FAVIR\) On-line Database](#))
- ◆ Nuts that are free from their husks or are shelled (see the [Miscellaneous and Processed Products Manual](#))

Seed for growing, increase, or planting (see the [Plants for Planting Manual](#))

- 
- 1 When the seed is an ingredient of animal feed or to be used for animal feed, then see also the *Animal Products Manual*.
  - 2 If the seed is labeled sprouting seed or seed for sprouting, then the seed is **exempt** from having to be accompanied by a phytosanitary certificate **and** from the sampling and testing provisions of the Federal Seed Act.
  - 3 For example, fresh, green shelled peas.

- ◆ Seed processed beyond harvesting (see the [Miscellaneous and Processed Products Manual](#))
- ◆ Seed that has sprouted (see the [Fruits and Vegetables Manual](#) and the [Fruits and Vegetables Import Requirements \(FAVIR\) On-line Database](#))
- ◆ Seed with pulp adhering, fleshy or leathery pulp, or unhusked seed **other than** coconuts (*Cocos nucifera*) and macadamia nuts (*Macadamia* spp.) (see the [Fruits and Vegetables Manual](#) and the [Fruits and Vegetables Import Requirements \(FAVIR\) On-line Database](#))
- ◆ Unprocessed seeds contained in fruits or vegetables **other than** coconuts (*Cocos nucifera*) and macadamia nuts (*Macadamia* spp.) (see the [Fruits and Vegetables Manual](#) and the [Fruits and Vegetables Import Requirements \(FAVIR\) On-line Database](#))

---

## Users

The *Seeds **Not** for Planting Manual* is written for use by the following regulatory officials working at airports, land borders, and seaports:

- ◆ Customs and Border Protection (CBP) officers
- ◆ CBP agricultural specialists
- ◆ Plant Protection and Quarantine (PPQ) officers

The experience levels of users will vary, but the assumption is that the officers minimally have a working knowledge of using PPQ's import manuals to make regulatory decisions.

Domestic and international PPQ officers and other regulatory officials also use this manual to answer questions related to importations that are asked by the brokers, importers, public, and other interested parties.

---

## Related Documents

### Authority

Enabling legislation provides the authority to carry out the mission of protecting American agriculture from plant pests. Legislative Acts are the fundamental authority granted by Congress to the Secretary of Agriculture to promulgate regulations to protect American agriculture. The regulatory authority for taking the actions listed in this manual is contained in the following legislative Acts and multi-national treaty:

- ◆ ***Code of Federal Regulations***
- ◆ ***Convention for International Trade in the Endangered Species of Wild Fauna and Flora (CITES)***
- ◆ ***Endangered Species Act***
- ◆ ***Homeland Security Act of 2002***
- ◆ ***Plant Protection Act of 2000***

### Code of Federal Regulations

The Code of Federal Regulations (CFRs) provide the authority for the regulatory action taken and are enforced by CBP and PPQ. The restrictions and prohibitions listed in this manual are covered by the following Title 7 and Title 50 Parts:

#### 7 CFR 319.8

7 CFR 319.8 Subpart—Foreign Cotton and Covers provides the following:

- ◆ Prohibits cottonseed, seed cotton, and fresh cut articles of cotton.
- ◆ Restricts the entry of all unmanufactured parts of the cotton plant (lint, linters; cottonseed cake, hulls and meal; cotton gin and thread waste); secondhand burlap, covers, and other fabrics that have held cotton, grain, field seed, underground crops, and meats
- ◆ Pests of concern—pink bollworm (*Pectinophora gossypiella*) and golden nematode (*Heterodera rostochiensis*)

#### 7 CFR 319.24

7 CFR 319.24 Subpart—Corn Diseases provides the following:

- ◆ Prohibits and restricts all parts of corn and corn relatives (including the seed) from specific countries
- ◆ Diseases of concern—*Peronospora maydis*, downy mildew (*Sclerospora sacchari*), *Physoderma* diseases of maize (*Physoderma zae-maydis*), and corn brown spot (*Physoderma maydis*)

- 7 CFR 319.37** 7 CFR 319.37 Subpart—Nursery Stock, Plants, Roots, Bulbs, Seeds and Other Plant Products provides the following:
- ◆ Regulates plants and plant parts capable of propagation, including branches with or without flowers imported as cut flowers, greenery, or decorative materials such as wreaths from the following genera: Chaenomeles, Cydonia, Eucalyptus, Malus, Poaceae, Prunus, Pyrus, Salix, and Vitis
  - ◆ List the approved growing media for propagative materials
- 7 CFR 319.41** 7 CFR 319.41 Subpart—Indian Corn or Maize, Broomcorn, and Related Plants provides the following:
- ◆ Prohibits or restricts the entry of corn, broomcorn, and related plants
  - ◆ Pest of concern—European corn borer (*Ostrinia nubilalis*)
- 7 CFR 319.55** 7 CFR 319.55 Subpart—Rice provides the following:
- ◆ Prohibits or restricts rice seeds, paddy rice, rice straw, and rice hulls
  - ◆ Diseases of concern—downy mildew (*Sclerospora macrospora*), leaf smut (*Entyloma oryzae*), blight (*Oospora oryzetorum*), and glume blotch (*Melanomma glumarum*)
- 7 CFR 319.56** 7 CFR 319.56 Subpart—Fruits and Vegetables provides the following:
- ◆ Restricts or prohibits fresh fruits and vegetables (including herbs) from all countries
  - ◆ Restricts frozen fruits and vegetables
  - ◆ Includes fresh, cut articles imported for decoration when fresh fruits are attached, e.g. pineapples (*Ananas* spp.) that are used as decorative articles
  - ◆ Pests of concern—fruit and melon flies (*Tephritidae*)
- 7 CFR 319.59** 7 CFR 319.59 Subpart—Wheat Diseases provides the following:
- ◆ Prohibits and restricts plants, plant parts and products of wheat and wheat relatives from countries infested with Karnal bunt
  - ◆ Includes products of the milling process, articles which have been manufactured from wheat plants or plant parts if their use could serve to disseminate the spores of Karnal bunt, and fresh, cut plant parts for decorative purposes
  - ◆ Pests of concern—Karnal bunt (*Teilletia indica*)
- 7 CFR 319.73** 7 CFR 319.73 Subpart—Coffee provides the following:

- ◆ Prohibits green (unroasted) and insufficiently roasted coffee beans and empty sacks previously used for unroasted coffee from all areas of the world into Hawaii and Puerto Rico
- ◆ Allows the entry into Hawaii and Puerto Rico of articles derived from the coffee plant if those articles present **no** risk of introducing the coffee berry borer or injurious rust diseases, e.g., coffee beans strung as beads offer little risk
- ◆ Pest of concern—coffee berry borer (*Stephanoderes hampei*)
- ◆ Disease of concern—rust disease caused by *Hemileia vastatrix*

### 7 CFR 319.75

7 CFR 319.75 Subpart—Khapra Beetle provides the following: Requires that articles capable of disseminating khapra beetle be treated as a condition of entry when coming from endemic or high risk countries.

### 7 CFR 330

7 CFR 330—Federal Plant Pest Regulations provides the following:

- ◆ Restricts the entry of miscellaneous cargo, plants, carriers, or any item which is or may act as a carrier of plant pests
- ◆ Restricts the movement of soil from Hawaii, Puerto Rico, and the U.S. Virgin Islands to the United States
- ◆ Pest of concern which means any living stage of any insects, mites, nematodes, slugs, snails, protozoa, or other invertebrate animals, bacteria, fungi, other parasitic plants or reproductive parts thereof, viruses, or any organisms similar to or allied with any of the foregoing, or any infectious substances which can directly or indirectly injure or cause disease or damage in any plants or parts thereof, or any processed, manufactured, or other products of plants; or any living stage of insects, mites, nematodes, slugs, snails, protozoa, or other invertebrate animals, bacteria, fungi, other parasitic plants or reproductive parts thereof, viruses, or any organisms similar to or allied with any of the foregoing, or any infectious substances of the aforementioned which are **not** genetically engineered as defined in 7CFR 340.1 which can directly or indirectly injure or cause disease or damage in any plants or parts thereof, or any processed, manufactured, or other products of plants

### 7 CFR 360

7 CFR 360—Noxious Weed Regulation provides the following: Lists weeds that are noxious and allows the importation of seed of listed weeds only under an import permit.

If you are unsure whether a plant is a Federal noxious weed, then see [Identification of Protected Plants and Genera of Taxa Regulated Higher Than Genus](#) on **page 3-1**.

### 7 CFR 361

7CFR 361—Importation of Seed and Screenings Under the Federal Seed Act.

- 50 CFR 17.12** 50 CFR 17.12 Subpart—Endangered and threatened plants, provides the following: Lists all species of plants that have been determined by the United States Fish and Wildlife Service, Department of the Interior, to be endangered or threatened.
  
- 50 CFR 23.23** 50 CFR 23.23 Subpart—Endangered Species Convention provides the following: Lists all species of plants and animals that have been placed in Appendix I, Appendix II, or Appendix III.
  
- 50 CFR 24.12** 50 CFR 24.12 Section—Designated ports, provides the following: List of U.S. Department of Agriculture ports that are designated ports for the import, export, or re-export of plants listed in 50CFR 17.12 or 50CFR 23.23.

## Convention for International Trade in the Endangered Species of Wild Fauna and Flora (CITES)

The Convention for International Trade in the Endangered Species of Wild Fauna and Flora (CITES) is a multinational treaty that regulates the importation of listed species of wild fauna and flora. CITES provides three appendixes for listing plants. These appendixes, in order of their restrictiveness are as follows:

1. CITES Appendix I—any genus, species, subspecies, or variety, globally threatened with extinction through trade.
2. CITES Appendix II—any taxon (the entire family—all genera and all species) that **must** be regulated in order to avoid the threat of extinction through trade.
3. CITES Appendix III—any species, subspecies, or variety listed by one country in order to enlist the cooperation of other countries to re-enforce domestic conservation measures by regulating trade.

Trade in protected species of CITES plants is monitored. More specifically, commercial trade in CITES Appendix I plants taken from the wild is **prohibited**, and commercial trade in CITES Appendix II plants is allowed **only** if that trade is **not** detrimental to the survival of the species in the wild.

## Endangered Species Act

The Endangered Species Act (ESA)<sup>4</sup> provides for the protection of listed species in two categories. These categories, listed in order of their restrictiveness, are as follows:

1. Endangered—any species, subspecies, or variety that is in danger of extinction throughout all or a significant portion of its range.
2. Threatened—any species, subspecies, or variety that is likely to become endangered within the foreseeable future throughout all or a significant portion of its range.

In general, the ESA **prohibits** the trade in endangered and threatened species. The importation of threatened species may be allowed for scientific research, enhancement of propagation, enhancement of survival, educational exhibition, display at botanical gardens and arboretums, and other activities consistent with the purposes or policy of ESA.

---

<sup>4</sup> The Endangered Species Act of 2002 authorizes the USDA to enforce the Convention of International Trade in Endangered Species of Wild Fauna and Flora (CITES).

### Homeland Security Act of 2002

Title 4, Section 421, transfers certain agricultural functions of the Department of Agriculture

### Plant Protection Act of 2000

The Plant Protection Act of 2000 provides the authority to prohibit or restrict imports, exports, or interstate movement of plant pests, plants, plant products, noxious weeds, biological control agents, and means of conveyance.

### Other Related Documents

Other documents that include information related to the importation of seeds that are **not** used for planting are the [\*Manual for Agricultural Clearance\*](#) (MAC) and the [\*Treatment Manual\*](#).

#### ***Manual for Agricultural Clearance***

The *Manual for Agricultural Clearance* (MAC) provides CBP personnel working at airport, maritime, and land border locations with guidelines, directions, and policy for excluding pests that are a threat to American agriculture.

#### ***Treatment Manual***

The *Treatment Manual* provides the details of treatments for use when a commodity **must** be treated as a condition of entry or based on pest findings.

---

### Application

The *Seed **Not** for Planting Manual* informs CBP agricultural specialists, PPQ officers, and their managers about how to regulate commercial and noncommercial shipments of seeds that are **not** for planting.

## Conventions

Conventions are established by custom and are widely recognized and accepted. Major conventions used in this manual follow.

### Advisories

Advisories are used throughout the *Seeds **Not** for Planting Manual* to bring important information to your attention. Please carefully review each advisory. The definitions coincide with American National Standards Institute (ANSI) and are in the format shown below:

DANGEROUS indicates that people could easily be hurt or killed.

WARNING indicates that people could possibly be hurt or killed.

CAUTION indicates that people could possibly be endangered and slightly hurt.

NOTICE indicates a possibly dangerous situation where goods might be damaged.

IMPORTANT indicates helpful information.

### Boldface

Boldface type is used to emphasize important words throughout this manual. These words include: **always**, **cannot**, **do not**, **does not**, **except**, **lacks**, **must**, **neither**, **never**, **no**, **nor**, **not**, **only**, and **other than**.

### Bullets

Bulleted lists indicate that there is **no** specific order to the information listed.

## Change Bars

A black change bar (see left margin) is used to indicate a change and appears on the revised page. Unfortunately, change bars **do not** always appear when text is merely deleted. Change bars from the previous update are deleted when the chapter or appendix is revised.

## Chapters

This manual contains the following chapters: *Introduction*, *Procedures*, and *Reference*.

## Contents

Every chapter has a table of contents that lists the heading titles within.

## Control Data

Control data is located at the top and bottom of each page to help manual users keep track of where they are in the manual and to be aware updates to specific chapters, sections, appendixes, etc., in the manual. At the top of the page is the chapter title and first-level heading. At the bottom of each page is the manual transmittal number (month, year, number), title of the manual, page number, and unit responsible for content of the manual.

## Decision Tables

Decision tables are used throughout the manual. The first and middle columns in each table represent conditions; and the last column represents the action to take after all conditions listed for that row are considered. Begin with the column headings and move left-to-right; and if the condition **does not** apply, then continue one row at a time until you find the condition that does apply.

**TABLE 1-1 How to Use Decision Tables**

<b>If you:</b>	<b>And if the condition applies:</b>	<b>Then:</b>
Read this column cell and row first	Continue in this cell	TAKE the action listed in this cell
Find the previous condition did <b>not</b> apply, then read this column cell	Continue in this cell	TAKE the action listed in this cell

## Examples

Examples are used to clarify a point by applying to a real-world situation. Examples always appear in boxes as a means of visually separating them from the other information contained on the page.

**EXAMPLE**

Examples are graphically placed boxes within the text as a means of visually separating information from other information contained on the page. Examples will always appear in a box.

### Footnotes

Footnotes comment on or cite a reference to text and are referenced by number. The footnotes used in this manual include general text footnote, figure footnotes, and table footnotes.

General text footnotes are located at the bottom of the page.

When space allows, figure and table footnotes are located at the end of the associated figure or table. However, for multi-page tables, or tables that cover the length of the page, footnote numbers and footnote text **cannot** be listed on the same page. If a figure or table continues beyond one page, then the associated footnotes will appear on the page following the end of the figure or table.

### Heading Levels

Within each chapter and section there are three heading levels. The first heading is indicated by a horizontal line, and the heading follows directly below and across both the left and right columns. The second heading is in the right column with the text beginning below. The third heading is in the left column and the text is in the right column.

### Hypertext Links (Highlighting)

Figures, headings, and tables that are cross-referenced in the body of the manual are highlighted and emphasized in boldface. These appear in blue are hypertext in the on-line manual.

**EXAMPLE**

See **Table 1-2** in the **Introduction** to determine where to report problems with this manual.

### Indentions

Entry requirements which are summarized from CFRs, import permits, or policies are indented on the page.

### Italics

The following items are italicized throughout the *Seed **Not** for Planting Manual*:

- ◆ Cross-references to headings and titles
- ◆ Publication names
- ◆ Scientific names of commodities

### Numbering Scheme

A two-level numbering scheme is used in this manual for figures, pages, and tables. The first number represents the chapter. The second number represents the figure, page, or table. This numbering scheme allows for identifying and updating. Dashes are used in page numbering to differentiate page numbers from decimal points.

### Transmittal Number

The transmittal number contains the month, year, and a consecutively-issued number (beginning with -01 for the first edition and increasing consecutively for each update to the edition). The transmittal number is only changed when the specific chapter sections, appendixes, glossary, tables, or index is updated. If **no** changes are made, then the transmittal number remains unchanged. The transmittal number **only** changes for the entire manual when a new edition is issued or changes are made to the entire manual.

#### EXAMPLE

05/2010-29 is the transmittal number for this update and is located in the control data on the pages in this chapter.

05 is the month the update was issued

2010 is the year the update was issued

29 is the number (original new edition was 01 plus 28 updates)

## Using the Manual

Review the contents of this manual to get a feel for the scope of the material covered. Glance through the section that you will be using and familiarize yourself with the organization of the information. Use the table of contents which follows to find the information you need. If the table of contents is **not** specific enough, then use the **Index** to find the topic and corresponding page number.

**EXAMPLE**

To find information to help you determine if you need to sample, go to **Step 2: Decide if You Need to Sample** on page **2-8**

### Reporting Problems With or Suggestions for the Manual

Use **Table 1-2** to determine where to report problems or disagreements with or suggestions for improvements for the *Seeds Not for Planting Manual*.

**TABLE 1-2 Where to Report Problems With or Suggestions for the *Seeds Not for Planting Manual***

If you:	Then:
Are <b>not</b> able to access the on-line manual	CONTACT PPQ's Manuals Unit by calling 240-529-0357 or by sending an e-mail to <a href="mailto:deborah.j.briggs@aphis.usda.gov">deborah.j.briggs@aphis.usda.gov</a>
Have a situation that requires an immediate response regarding the admissibility of a commodity	CBP CONTACT the Field Office Agriculture Liaison through the chain of command
	PPQ CONTACT PPQ RPM RCC PC by sending an e-mail or by calling 301-734-0627 or 301-734-8790
Have a suggestion for improving the formatting of the manual (design, layout), composition, grammar, or spelling	CONTACT PPQ's Manuals Unit by sending an e-mail to <a href="mailto:deborah.j.briggs@aphis.usda.gov">deborah.j.briggs@aphis.usda.gov</a> or by printing and completing the <b>Comment Sheet</b> , and sending by FAX to 240-529-0399 or mailing to the address on the form
Disagree with the admissibility of a commodity	CBP CONTACT the Field Office Agriculture Liaison through the chain of command with the reason for the disagreement and a recommendation
	PPQ CONTACT
Disagree with policy, procedures	CBP CONTACT the Field Office Agriculture Liaison through the chain of command with the reason for the disagreement and a recommendation
	PPQ CONTACT PPQ RPM RCC PC with the reason for the disagreement and a recommendation

### Manual Updates

The PPQ Manuals Unit issues and maintains manuals electronically on the Manuals Unit Web site. The on-line manuals contain the most up-to-date information.

Immediate update revisions to the manual are issued and distributed via e-mail to CBP Agricultural Specials and all PPQ employees.

Each immediate update contains the following information:

- ◆ Link to access and download the on-line manual
- ◆ List of the revised pages
- ◆ Purpose of the revision(s)
- ◆ Transmittal number

### **Ordering Additional Manuals and Revisions**

Although using the on-line manuals is the preferred method, APHIS employees may order hard copies of manuals from the APHIS Printing, Distribution, and Mail Services Center in Riverdale, Maryland. Visit the Riverdale Print Shop Web site for detailed information and printing costs. The Manuals Unit is **not** responsible for printing costs.

### Introduction

The information presented in the **Procedures** chapter includes the prerequisites and general directions for sampling, inspecting, and regulating unprocessed seeds; and special procedures and special procedures for authorizing the grinding of commodities contaminated with noxious weed seeds.

Unprocessed seeds **do not** include seeds that are intended for planting/increase; and have **not** undergone processes that change the nature of the seeds.

### Preparation

The information presented under **Preparation** is a prerequisite to the **General Inspection Procedures for Clearing Seeds**. Be sure to complete the preparatory tasks described below.

#### Information Needed

Do some solid investigating and be creative when collecting the necessary information which can be obtained from a variety of sources. See **Table 2-1** for sources of information.

Obtain the following information:

- ◆ Scientific or common name of the seeds
- ◆ Origin of the seeds (where they were grown or harvested, **not** the port of lading)
- ◆ Destination of the seeds (where they will be used)
  - ❖ Destination is **not** always the port of entry
  - ❖ Destination company's name may provide a clue on end use
  - ❖ Checking the consignee's web site to understand the nature of the business
  - ❖ Packaging and/or size of the shipment may provide a clue on intended use
  - ❖ Asking the broker where or how the seeds will be used
- ◆ Intended use of the seeds (how the seeds are to be used determines which restrictions apply)

**EXAMPLE**

Corn seeds could be used for propagation, for food, or for animal feed. See also the *Animal Product Manual* to regulate animal feed.

- ❖ Seeds that are **not** intended for propagation **must** be unprocessed beyond harvesting and free from fleshy pulp or leathery husks<sup>1</sup>
- ◆ Presence or absence of a phytosanitary certificate: presence of a phytosanitary certificate may indicate the importation is intended for planting

Make sure that the information is accurate. Manifests often show the port or airport of lading, but **not** the origin of the commodities; therefore, you may need to check other documents for the country of origin. Consult reference materials and PPQ specialists (botanist, entomologist, and plant pathologist) through proper channels when you are **not** sure what is being imported.

**Example**

An air waybill of lading shows 15 bags of curcubit seeds being imported from Ireland. However, when you begin drawing subsamples, you notice the bags have printing that says the seeds were grown in India.

---

1 Use this *Seed Not for Planting Manual* for coconuts (**Coconut (Cocos nucifera)**) and macadamia nuts (**Macadamia Nut (Macadamia spp.)**) that are still in their husks.

If the inspector has exhausted all attempts to clarify and is still unable to determine the intended use of seeds, then regulate the seeds as if they were intended for planting or growing and use the *Clearing Seeds for Planting: A Job Aid for CBP Officers*.

**TABLE 2-1 Where to Collect Information Needed**

If the shipment is:	Then get information from:
Commercial (for resale or for profit)	<ul style="list-style-type: none"> <li>◆ Carrier documents (air waybills and shipping papers)</li> <li>◆ Computers and computer printouts</li> <li>◆ Foreign phytosanitary certificates</li> <li>◆ Interviews with importers, brokers, freight forwarders, or other representatives of the importer</li> <li>◆ Invoices (obtained from importer or broker)</li> <li>◆ Internet (search for the company's Web site)</li> <li>◆ Labels</li> <li>◆ Manifests and other U.S. Customs forms</li> <li>◆ Notices of arrival</li> <li>◆ Packing lists</li> <li>◆ Permits: (PPQ, Convention on International Trade in Endangered Species of Fauna and Flora (CITES), and Endangered Species (ESA)</li> </ul>
Noncommercial ( <b>not</b> for sale or profit)	<ul style="list-style-type: none"> <li>◆ Declaration (oral or written U.S. Customs declaration)</li> <li>◆ Documents (such as a sales receipt)</li> <li>◆ Foreign phytosanitary certificates</li> <li>◆ Internet (search for the company's Web site)</li> <li>◆ Interviews with the importers</li> <li>◆ Labels (information written on the packaging)</li> <li>◆ Permits</li> </ul>

### Materials Needed

When sampling, have the following materials available:

- ◆ Adhesive tape
- ◆ Knife
- ◆ Label or marking pen to identify the sample
- ◆ Sample cloth (a piece of cloth the length of the trier to empty the subsamples onto)
- ◆ Seed sample bag or quart-sized container (to hold the subsample)
- ◆ Trier

## Regulatory Action

Once you have all the information needed to make a regulatory decision, take one of the following actions:

- ◆ **Authorize Shipment**
- ◆ **Hold**
- ◆ **Prohibit Entry**
- ◆ **Release**

### Authorize Shipment

The regulatory action to AUTHORIZE SHIPMENT may be authorized under U.S. Customs bond (also called in-bond or I.T.) and allows the item to move to another port where CBP or PPQ have personnel to inspect or monitor treatment of the item. Authorize shipment if:

- ◆ The receiving CBP or PPQ office agrees to clear the cargo
- ◆ The cargo is moving to an approved treatment facility when you would prescribe proper safeguards to prevent any pest escape
- ◆ The cargo remains aboard the carrier as residue cargo and the destination is authorized for the regulated cargo
- ◆ The conditions of the import permit require that the regulated item be cleared or treated at a specific port of entry, e.g., Departmental permit material to the National Plant Germplasm and Biotechnology Laboratory in Beltsville, Maryland

### Hold

The regulatory action to HOLD maintains control of the cargo while:

- ◆ Collecting information to make a regulatory decision
- ◆ Awaiting inspection of the cargo
- ◆ Awaiting importer or representative to make cargo accessible for inspection
- ◆ Awaiting the identification of an “urgent interception”<sup>2</sup>
- ◆ Awaiting decision by importer to apply for required import permit, to treat, or to re-export
- ◆ Awaiting a copy of an approved import permit

### Prohibit Entry

Take the regulatory action PROHIBIT ENTRY if the plants or plant products are:

- ◆ Prohibited and **not** authorized by a Departmental permit

---

<sup>2</sup> If a commercial shipment requires treatment or if the shipment is being held pending the identification of a pest, allow the importer either to have the commodity treated or re-exported, or arrange for its destruction. In general, it is impractical to treat articles intercepted in baggage; therefore, seize and destroy such articles. On occasion, because of the high value of some seeds, you may have to defer a decision to a higher authority. In this instance, safeguard the seeds and refrigerate if necessary. Tell the passengers that they **must** arrange for the pick up or the forwarding of the seeds if they are found to be admissible.

- ◆ Infested with plant pests and the importer refuses to treat the commodities
- ◆ Imported and the importer refuses to comply with the conditions of entry
- ◆ Infested with a pest for which a treatment **does not** exist or is **not** feasible

## Release

Take the regulatory action to RELEASE after ensuring:

- ◆ The material is admissible
- ◆ All import permit requirements have been met
- ◆ Treatable pests have **not** been found
- ◆ Required treatments, if any, have been completed
- ◆ All required documents are in order (CITES, import permits, foreign phytosanitary certificates)

## General Inspection Procedures for Clearing Seeds

**Figure 2-1** contains overview of the steps involved in sampling, inspecting, and regulating seeds **not** for planting. Details of each step follow the overview.

**Step 1: Determine if Admissible or Prohibited**

**Step 2: Decide if You Need to Sample**

**Step 3: Compute the Number of Subsamples to Draw**

**Step 4: Draw the Subsamples and Combine Them Into One Sample**

**Step 5: Inspect the Sample**

**Step 6: Take the Appropriate Regulatory Action**

**FIGURE 2-1** General Inspection Procedures for Clearing Seeds Not for Planting

### Step 1: Determine if Admissible or Prohibited

After collecting and reviewing the documents accompanying the shipment, determine the admissibility of each kind of seed using the *Reference* to identify if the seeds are restricted or prohibited by USDA-APHIS-PPQ regulations. Initially screen for prohibitions using **Table 2-2** if the seeds were listed in the *Reference*, or using **Table 2-3** if the seeds were **not** listed in the *Reference*.

**TABLE 2-2 Screening for Prohibitions of Seeds Listed in the Reference**

If the seeds are:	And the regulatory action listed is to:	Then:
Protected by CITES or ESA, or are from Federal noxious weeds or parasitic plants <sup>1</sup>	→	FOLLOW the directions in the <i>Reference on page 3-1</i>
Not from protected plants, noxious weeds, or parasitic plants	INSPECT and RELEASE	GO to <b>Step 2: Decide if You Need to Sample</b>
	REQUIRE a treatment	1. HOLD the shipment 2. NOTIFY local PPQ that the shipment must be treated in order to meet entry requirements
	PROHIBIT ENTRY	1. If <b>unaccompanied</b> by a Departmental permit issued by PPQ's Biological and Technical Services, then ALLOW the importer to re-export or abandon for destruction 2. If in baggage or the mail, then PROHIBIT ENTRY 3. EXIT this manual

1 If you are unsure whether the seeds are protected by CITES or ESA, or are from Federal noxious weeds or parasitic plants, then refer to [Identification of Protected Plants and Genera of Taxa Regulated Higher Than Genus](#) on **page 3-1** in the *Reference* for directions about how to access GRIN and other databases.

**TABLE 2-3 Screen for Prohibitions of Seeds Not Listed in the Reference**

<b>If the seeds are:</b>	<b>And the seeds are:</b>	<b>And the importer:</b>	<b>And the seeds are:</b>	<b>Then:</b>	
Protected by CITES or ESA, or are from Federal noxious weeds or parasitic plants <sup>1</sup>	CITES or ESA protected plants			1. HOLD shipment 2. CONTACT a CBP agricultural specialist to determine if you are a CITES designated port for the seeds being imported 3. If you are a CITES designated port for the seeds being imported: TAKE regulatory action under plant quarantines and plant pest regulations REGULATE as CITES or ESA as appropriate 4. If you are <b>not</b> a CITES designated port for the seeds being imported: SAFEGUARD under plant quarantines and plant pest regulations GIVE the importer one of the following options: <b>Re-export</b> the seeds to the country of origin <b>Reroute</b> the seeds to a CITES designated port <b>NOTE:</b> Shipping and handling charges are the responsibility of the importer	
	Federal noxious weeds or parasitic plants	Has a validated PPQ Form 526 <sup>2</sup>		RELEASE or CONTROL as specified on the import permit	
		Lacks a validated permit	Imported for research or experimental purposes		1. HOLD Shipment 2. DIRECT importer to apply for a Permit to Import Live Pests and Noxious Weeds <sup>3</sup>
			Imported for a purpose <b>other than</b> research or experimentation		PROHIBIT ENTRY
			Contaminants	GO to <b>Table 2-9</b>	
<b>Not</b> from protected plants, noxious weeds, or parasitic plants				1. INSPECT and RELEASE 2. GO to <b>Step 2: Decide if You Need to Sample</b>	

- 1 If you are unsure whether the seeds are protected by CITES or ESA, or are from Federal noxious weeds or parasitic plants, refer to [Identification of Protected Plants and Genera of Taxa Regulated Higher Than Genus](#) on **page 3-1** in the *Reference* for directions about how to access GRIN and other databases.
- 2 PPQ Form 526, Application to Move Live Plant Pests and Noxious Weeds.
- 3 Permit Unit Web site is [http://www.aphis.usda.gov/permits/ppq\\_epermits.shtml](http://www.aphis.usda.gov/permits/ppq_epermits.shtml) or call or 1-877-770-5990.

**Procedures**

General Inspection Procedures for Clearing Seeds

---

**Step 2: Decide if You Need to Sample**

Use **Table 2-4** to determine if you need to sample based on the weight of the shipment. Find the weight of the shipment from the hold sheet (CBP Form AI-212, Agriculture Inspection Hold Sheet), the manifest, or the invoice.

**TABLE 2-4 Decide if You Need to Sample the Seed Shipment**

<b>If the shipment is:</b>	<b>Then:</b>
100 pounds or less	1. <b>DO NOT</b> sample 2. SKIP to <b>Step 5: Inspect the Sample</b>
More than 100 pounds	GO to <b>Step 3: Compute the Number of Subsamples to Draw</b>

### Step 3: Compute the Number of Subsamples to Draw

You determine in Step 2 that a sample is required because the shipment weighs more than 100 pounds, as indicated on the hold sheet (PPQ Form 212), manifest, or invoice. To compute the number of subsamples to draw when the seeds are shipped in bags or packages, GO to 1. When the seeds are shipped in bulk, GO to 2.

1. Use **Table 2-5** to look up the total number of bags or packages in the shipment and find the number of subsamples to draw.

**TABLE 2-5 Determine the Number of Subsamples to Draw**

If the number of bags or packages in the shipment is:	Then draw this many subsamples to make your sample:	If the number of bags or packages in the shipment is:	Then draw this many subsamples to make your sample:
1 to 6	5	125 to 134	18
7 to 14	6	135 to 144	19
15 to 24	7	145 to 154	20
25 to 34	8	155 to 164	21
35 to 44	9	165 to 174	22
45 to 54	10	175 to 184	23
55 to 64	11	185 to 194	24
65 to 74	12	195 to 204	25
75 to 84	13	205 to 214	26
85 to 94	14	215 to 224	27
95 to 104	15	225 to 234	28
105 to 114	16	235 to 244	29
115 to 124	17	245 or more	30

**Important**

**Do not** draw more than 30 subsamples if there are more than 245 bags or packages in the shipment.

**Still** draw 5 subsamples if there are less than 5 bags or packages in the shipment.

2. Compute the number of subsamples to draw in a bulk shipment of seeds by doing the following:
  - A. Divide the total weight of the grain by 100 (an equivalent number to bags or packages).
  - B. Take the results from 'A' above and look up the number of subsamples to draw using **Table 2-5**.

## Procedures

### General Inspection Procedures for Clearing Seeds

---

**EXAMPLE**

A bulk shipment of seeds is invoiced as weighing 2,000 pounds, divided by 100 = 20. Looking up 20 in **Table 2-5**, it directs you to draw 7 subsamples.

### Step 4: Draw the Subsamples and Combine Them Into One Sample

This step has two parts. First, sample the grain with a trier. If the seeds are too large, **do not** flow freely, or are packaged to prevent the use of a trier; then scoop up the seeds in your hand. Hand method of sampling is the least preferred method because it yields the least representative sample. Second, combine the subsamples to make up one sample of the shipment ready for inspecting.

1. Randomly draw the subsamples with a trier by doing the following. When sampling bulk shipments, draw the sample at equal intervals throughout the shipment.
  - A. Insert trier into the seeds (with the holes down and closed).
  - B. Rotate the entire trier until the holes are facing up.
  - C. Rotate the inner core of the trier to open the holes.
  - D. Lightly move the trier in and out to get the seeds into the trier.
  - E. Rotate the inner core of the trier to close the holes.
  - F. Remove the trier from the bag or bulk seeds.
  - G. Close the hole in the bag made by the trier. If it is a burlap or cloth bag, then close the hole in the bag by moving the tip of the trier over the weave. If it is a paper bag, then close the hole with a pressure sensitive label or masking tape.
2. Combine the subsamples drawn to make up one sample by doing the following:
  - A. Place the subsamples of seeds in a container or on a piece of paper large enough to hold all the subsamples.
  - B. Mix the seeds thoroughly to blend the subsamples. Make sure you collected enough seeds to have a sufficient amount to analyze (computed in **Step 3: Compute the Number of Subsamples to Draw**).
  - C. GO to **Step 5: Inspect the Sample**.

## Step 5: Inspect the Sample

Inspect all seed shipments for plant pests. Because seeds are excellent hosts, look for all types of plant pests, **not** just insects. In addition, some pests may survive for years, safely lodged on or in seeds or on bits of stems or leaves mixed with seeds. Inspecting also includes examining bagging and containers for the presence of plant pests and other contaminants. Look for soil and other prohibited seeds, such as wheat in a corn shipment from a country infected with Karnal bunt. When inspecting bird seeds, thoroughly examine for noxious weed seeds as they are usually present.

Here is a list of what to look for in seeds and in their containers followed by detailed inspection techniques for each:

- ◆ **Burlap and Jute Bags**
- ◆ **Contaminants**
- ◆ **Insects**
- ◆ **Mollusks** (snails)
- ◆ **Nematodes**
- ◆ **Noxious Weed Seeds**
- ◆ **Pathogens** (diseases)

### Burlap and Jute Bags

If you are inspecting seeds in bags (especially in burlap and jute) and the seeds are being imported from a khapra beetle endemic country<sup>3</sup>, examine the seams and ears of the bags to uncover any khapra beetle (*Trogoderma granarium*) that might be hiding there.

If bags are made of used burlap or jute from khapra beetle endemic countries, then the shipment **must** be fumigated.

1. REQUIRE an import permit under 7CFR 319.75
2. REQUIRE T 302-c.
3. HOLD the shipment.
4. NOTIFY local PPQ that the shipment must be treated in order to meet entry requirements.

### Contaminants

When seeds are harvested or collected, they may be contaminated with prohibited trash, soil, manure, and seeds of other crops and weeds. In addition to looking for pests and pathogens, look for any plant litter in the seeds that could carry a pest. Be alert for soil, fungal bodies (like ergot and smut balls), nematode galls, chaff, stems, and parts of prohibited plants.

<sup>3</sup> Countries where khapra beetle is endemic: Afghanistan, Algeria, Bangladesh, Burkina Faso (formerly Upper Volta), Burma (Myanmar), Cyprus, Egypt, India, Iran, Iraq, Israel, Libya, Mali, Mauritania, Morocco, Niger, Nigeria, Pakistan, Saudi Arabia, Senegal, Sri Lanka, Sudan, Syria, Tunisia, and Turkey.

**Insects**

When inspecting for insects, look for frass and evidence of feeding. In the seeds of legumes, look for circular, transparent windows-evidence of seed borers. Examine seeds for exit holes and the presence of cast skins.

If the seed shipment is from a khapra beetle endemic country<sup>3</sup>, then inspect the seeds closely for khapra beetle (primarily cast skins and larvae).

**Mollusks**

Look for slime trails, shells, and aestivating snails.

**Nematodes**

Look for discolored seeds or kernels that are replaced by one or several galls.

**Noxious Weed Seeds**

Look for seeds and other reproductive parts of these weeds. Inspect carefully because some seeds of parasitic plants are as fine as dust. Use a magnification lamp or dissecting scope to look for noxious weed seeds.

**Pathogens**

Although some seedborne diseases **cannot** be detected visually, you can see the following characteristics:

- ◆ Discoloration near the germ end on cereals and grasses
- ◆ Pinkish kernels with a rough and scabby surface
- ◆ Small brown to black raised, circular spots on the seeds
- ◆ Brownish-gray spots with a light center
- ◆ Brown to yellowish sunken lesions
- ◆ Rust pustules, smuts, and sclerotic

### Step 6: Take the Appropriate Regulatory Action

Take the appropriate regulatory action beginning with [Table 2-6](#).

**TABLE 2-6 Take the Appropriate Regulatory Action Based on How the Seeds are Contained**

If the seeds are contained in:	And arriving from or originating in:	Then:	Authority:
Used burlap or jute	Afghanistan, Algeria, Bangladesh, Burkina Faso (formerly Upper Volta), Burma (Myanmar), Cyprus, Egypt, India, Iran, Iraq, Israel, Libya, Mali, Mauritania, Morocco, Niger, Nigeria, Pakistan, Saudi Arabia, Senegal, Sri Lanka, Sudan, Syria, Tunisia, or Turkey	1. REQUIRE an import permit <sup>1</sup> under 7CFR 319.75 2. REQUIRE T302-c <sup>2</sup> 3. HOLD shipment 4. NOTIFY local PPQ that the shipment <b>must</b> be treated in order to meet entry requirements 5. GO to <a href="#">Table 2-7</a>	7CFR 319.75
	Country <b>other than</b> listed above	GO to <a href="#">Table 2-7</a>	
Other than used burlap or jute	→		

- 1 If the importer **lacks** an import permit and the shipment is noncommercial that can be inspected 100 percent, then the permit requirements may be waived. Otherwise, HOLD the shipment and direct the importer to apply for a permit. Refer to *Appendix A, Permits and Foreign Phytosanitary Certificates* on **page A-1** for instructions and information about permits.
- 2 Other pests or contaminants may be found that require a more potent treatment.

**TABLE 2-7 Take the Appropriate Regulatory Action Based on Inspection Results**

If you find:	Then:	Authority:
Pests such as insects, mites, snails, or pathogens <sup>1</sup>	1. HOLD shipment 2. SEND the interception for identification to the nearest PPQ Plant Inspection Station through proper channels	
Soil or manure	1. HOLD shipment 2. FOLLOW local protocol to contact the appropriate district, region, or headquarters agricultural specialist	
Plants or plant parts including their seeds <sup>2</sup>	GO to <a href="#">Table 2-8</a>	
<b>No</b> presence of pests or contaminants	RELEASE the shipment if it was otherwise admissible	7CFR 330.105

- 1 Although infested with the larva of the Mexican jumping-bean moth, *Cydia dehausiana*, the seeds of *Sebastiania* spp. and *Sapium* spp. are admissible. These seeds may be released without an import permit. Nevertheless, some States regulate these infested seeds.

- 2 If you **cannot** identify the plant from which the contaminant came, HOLD shipment and SEND the interception for identification to the nearest PPQ Plant Inspection Station through proper channels.

**TABLE 2-8 Take the Appropriate Regulatory Action Based on Contamination of Plants or Plant Parts**

<b>If the plant contaminant is:</b>	<b>And it is:</b>	<b>And there are:</b>	<b>And the seeds were harvested in:</b>	<b>Then:</b>	
Wheat <sup>1</sup>			→	INSPECT AND RELEASE <sup>2</sup>	
Corn, millets, or a corn relative specifically: ◆ <i>Chionachne</i> spp. ◆ <i>Coix</i> spp. ◆ <i>Echinochloa</i> spp. ◆ <i>Eleusine</i> spp. ◆ <i>Euchlaena</i> spp. ◆ <i>Miscanthus</i> spp. ◆ <i>Panicum</i> spp. ◆ <i>Pennisetum</i> spp. ◆ <i>Polytoca</i> spp. ◆ <i>Sclerachne</i> spp. ◆ <i>Setaria</i> spp. ◆ <i>Sorghum</i> spp. ◆ <i>Trilobachne</i> spp. ◆ <i>Tripsacum</i> spp.	<b>Unlikely</b> that the seed will be released into the environment <sup>3</sup>	28 or <b>fewer</b> seeds of contaminant per quart of seed	→	RELEASE	
		29 or <b>more</b> seeds of contaminant per quart of seed	Australia	GO to <a href="#">Table 2-10</a>	
			New Zealand	GO to <a href="#">Table 2-11</a>	
	<b>Other than</b> Australia or New Zealand		GO to <a href="#">Table 2-9</a>		
	<b>Likely</b> that the seed will be released into the environment <sup>4</sup>		→	Australia	GO to <a href="#">Table 2-10</a>
			→	New Zealand	GO to <a href="#">Table 2-11</a>
			→	<b>Other than</b> Australia or New Zealand	GO to <a href="#">Table 2-9</a>
	<b>Other than</b> wheat, corn, or a corn relative including millets; or the plant contaminant is <b>not</b> identifiable			→	

- 1 If the wheat contaminating the seed comprises **more than** 5 percent of the imported seed, then treat the wheat as a component, **not** as a contaminant. For example, if a consignment of oats was 10 percent wheat, then take action on the wheat as well the barley. Take action on the most restrictive seed in the mixture, wheat in this case.
- 2 If you detect bunted kernels (perhaps Karnal bunt), return to [Table 2-7](#) and regulate as an actionable pest.
- 3 For example, the seed is for manufacturing, to be used as a spice, or it will be processed further.
- 4 For example, the seed will be used to feed animals or as bird seed.

**Procedures**

General Inspection Procedures for Clearing Seeds

**TABLE 2-9 Take the Appropriate Regulatory Action Based on Plant Contaminants (Corn or Corn Relatives Including Millets, or Plant Contaminants That Are Not Identifiable)**

If the contaminants are:	And the seeds:	Then:
Federal noxious weeds	Can be freed from the contaminants and the importer is in agreement, the contaminants can be devitalized, or grinding is appropriate method for mitigating the risk of noxious weed contamination <sup>1</sup>	1. GO to <a href="#">Special Procedures for Authorizing the Grinding of Commodities Contaminated with Federal Noxious Weed Seeds</a> to determine if grinding is an appropriate option for nonpropagative commodities contaminated with Federal noxious weed seeds 2. AUTHORIZE movement of the shipment to a facility that will grind the seeds, remove the contaminant <sup>2</sup> , or have devitalized 3. If the seeds are freed from the contaminants or the seeds are ground or devitalized, RELEASE; otherwise, PROHIBIT ENTRY
	<b>Cannot</b> be freed from the contaminants, <b>cannot</b> be devitalized or ground to mitigate the risk of noxious weed contamination, or the importer disagrees	PROHIBIT ENTRY unless accompanied by, and in compliance with, a valid PPQ form 526, permit to move noxious weeds
Plant structures prohibited by 7 CFR 319 or 7 CFR 330 <sup>3</sup>	→	PROHIBIT ENTRY unless accompanied by, and in compliance with, a valid PPQ Departmental Permit
<b>Neither</b> of the categories identified in the cells above	→	RELEASE

- 1 If grinding would be an appropriate method for mitigating the risk of contamination with noxious weed propagules, GO to [Special Procedures for Authorizing the Grinding of Commodities Contaminated with Federal Noxious Weed Seeds](#) on **page 2-18**.
- 2 Before the entire shipment is cleaned, encourage the importer to have a sufficiently large sample run through the operation to verify that the contaminants can be removed.
- 3 Examples of prohibited seeds include those from bamboo, parasitic plants, and rice

**TABLE 2-10 Take the Appropriate Regulatory Action Based on Plant Contaminants of Corn or Corn Relatives Including Millets in Seeds From Australia (from TABLE 2-8)**

<b>If grown in:</b>	<b>And the seeds are contaminated with:</b>	<b>And the seeds:</b>	<b>Then:</b>
New South Wales, Australia	<i>Pennisetum clandestinum</i> , <i>Pennisetum macrourum</i> , <i>Pennisetum pedicellatum</i> , <i>Pennisetum polystachion</i> , or <i>Setaria pallide-fusca</i>	Can be freed from contaminants and the importer is in agreement, or the contaminants can be devitalized	1. AUTHORIZE the shipment to move to the facility that will remove contaminants <sup>1</sup> or have them devitalized 2. If the seeds are freed from contaminants or they are devitalized, then RELEASE; otherwise 3. PROHIBIT ENTRY
		<b>Cannot</b> be freed from contaminants, <b>cannot</b> be devitalized, or the importer disagrees	PROHIBIT ENTRY unless accompanied by a validated PPQ Form 526 <sup>2</sup>
	<i>Echinochloa</i> spp., <i>Eleusine</i> spp., <i>Panicum</i> spp., or a <i>Pennisetum</i> species or <i>Setaria</i> species <b>not</b> listed above	→	RELEASE
Queensland, Australia	<i>Pennisetum clandestinum</i> , <i>Pennisetum macrourum</i> , <i>Pennisetum pedicellatum</i> , <i>Pennisetum polystachion</i>	Can be freed from contaminants and the importer is in agreement, or the contaminants can be devitalized	1. AUTHORIZE the shipment to move to the facility that will remove the contaminants or have them devitalized 2. If the seeds are freed from contaminants <sup>1</sup> or they are devitalized, then RELEASE; otherwise 3. PROHIBIT ENTRY
		<b>Cannot</b> be freed from contaminants, <b>cannot</b> be devitalized, or the importer disagrees	PROHIBIT ENTRY unless accompanied by a validated PPQ Form 526 <sup>2</sup>

If the seeds are freed from contaminants or they are devitalized, then RELEASE; otherwise 3. PROHIBIT ENTRY
	<b>Cannot</b> be freed from contaminants, <b>cannot</b> be devitalized, or the importer disagrees	PROHIBIT ENTRY unless accompanied by a validated PPQ Form 526 <sup>2</sup>
A species of millet <b>not</b> listed above		RELEASE if the millet is the only contaminant

- 1 Before the importer has the entire shipment cleaned, encourage the importer to have a sufficiently large sample run through the operation to verify that the contaminant can be removed.
- 2 PPQ Form 526, Application to Move Live Plant Pests and Noxious Weeds.

**Special Procedures for Authorizing the Grinding of Commodities Contaminated with Federal Noxious Weed Seeds**

Use these special procedures for determining if grinding is an appropriate option for nonpropagative commodities contaminated with Federal noxious weed seeds.

If regulatory officials find disease-significant contaminants, then grinding is **not** appropriate.

**Background Information**

USDA-APHIS-PPQ policy is to allow entry of commodities contaminated with noxious weed seeds when the commodities are **not** intended for planting or growing and after processing provided the following:

- ◆ Contaminated seeds can be moved safely to the processing facility
- ◆ Importer or processor enters into a compliance agreement with USDA-APHIS-PPQ
- ◆ Processing facility is **not** used for cleaning seeds

- ◆ Processing facility is located where USDA-APHIS-PPQ can provide monitoring
- ◆ Processing of the contaminated seeds will eliminate the pest risk
- ◆ Processing will eliminate risk from generated waste materials

### Determine if Grinding Is an Appropriate Option for Mitigating Risk

**Table 2-12** and **Table 2-13** provide the necessary information needed to determine whether the grinding process proposed by the importer will successfully mitigate the risk. These tables provide consistent information to ensure that the approval of grinding is consistent among ports of entry. These tables provide guidance, but **do not** preclude the need to monitor and spot check the milled products.

The first column of each table lists actionable weeds that have been detected in commodities such as spices, herbal medicines, and grain. **Table 2-12** lists actionable weed names beginning A through L; and **Table 2-13** lists those beginning M through Z.

The second column of each table provides the dimensions of the **smallest** propagule for the taxa, while the third column provides the **largest** appropriate U.S. standard screen size for the milling process.

The information contained in these tables may be incorporated into compliance agreements.

If you find noxious weeds **other than** those listed in these tables, then contact PPQ's Biological and Technical Services through proper channels. PPQ's Biological and Technical Services will determine the smallest seed size for new noxious weeds and will update the information in the tables.

Continue to **Table 2-12** to select a screen size A through L; and see **Table 2-13** to select a screen size M through Z.

**Procedures**

Special Procedures for Authorizing the Grinding of Commodities Contaminated with Federal Noxious Weed Seeds

**TABLE 2-12 Select a Screen Size A through L**

<b>If the noxious weed is:</b>	<b>Then the smallest seed dimensions<sup>1</sup> in length x width (in mm) are:</b>	<b>Then the largest U.S. standard screen<sup>2</sup> through which milled products must pass 100 percent is:</b>
<i>Asphodelus fistulosus</i> (onionweed)	(seed) 2.5 x 1.7	1.00 mm (USS # 18)
<i>Avena sterilis</i> (animated oat)	(caryopsis) 7 x 2	1.18 mm (USS # 16)
<i>Borreria alata</i> = <i>Spermacoce alata</i> (borreria)	(seed) 1.3 x 0.8	500 µm (USS # 35)
<i>Carthamus oxycantha</i> (wild safflower)	(achene) 3 x 1.8	1.18 mm (USS # 16)
<i>Commelina benghalensis</i> (Benghal dayflower)	(seed) 1.6 x 1.3	710 µm (USS # 25)
<i>Cuscuta</i> spp. (dodder)	(seed of smallest species) 0.6 x 0.6 (round)	355 µm (USS # 45)
		437 µm (SSBC #46) wire cloth
<i>Digitaria scalarum</i> = <i>Digitaria abyssinica</i> (African couch grass)	(spikelet) 1.7 x 0.8	500 µm (USS # 35)
<i>Digitaria velutina</i> (velvet fingergrass)	(spikelet) 1.6 x 0.5	300 µm (USS # 50)
<i>Emex spinosa</i> (devil's thorn)	(removed fruit/floral parts) 3 x 1.6	1.00 mm (USS # 18)
<i>Heracleum mantegazzianum</i> (giant hogweed)	(mericarp) 7 x 4.5	2.80 mm (USS # 7)
<i>Imperata cylindrica</i> (cogongrass) and <i>Imperata brasiliensis</i> (Brazilian satintail)	(caryopsis) 0.8 x 0.3	180 µm (USS # 80)
<i>Ipomoea aquatica</i> (Chinese water spinach)	(seed) 4 x 2.8	1.70 mm (USS # 12)
<i>Ischaemum rugosum</i> (murain-grass)	(caryopsis) 2 x 0.9	500 µm (USS # 35)

1 Derived from scientific literature and measuring herbarium specimens.

2 Smaller-pored screens may be used.

Use **Table 2-13** to select a screen size M through Z.

**TABLE 2-13 Selecting a Screen Size M through Z**

<b>If the noxious weed is:</b>	<b>Then the smallest seed dimensions<sup>1</sup> in length x width (in mm) are:</b>	<b>Then the largest U.S. standard screen<sup>2</sup> through which milled products must pass 100 percent is:</b>
<i>Mimosa invisa</i> (giant sensitive plant)	(seed) 2 x 1.6	1.00 mm (USS # 18)
<i>Oryza</i> spp. (hulled red rices)	(caryopsis) 3 x 1.2	710 µm (USS # 25)
<i>Paspalum scrobiculatum</i> (Kodo-millet)	(caryopsis) 1.3 x 0.9	500 µm (USS # 35)
<i>Pennisetum clandestinum</i> <sup>3</sup> (kikuyu grass)	(caryopsis) 1.5 x 1.1	710 µm (USS # 25)
<i>Rottboellia exaltata</i> = <i>R. cochinchinensis</i> (itchgrass)	(caryopsis) 3 x 1.75	1.00 mm (USS # 18)
<i>Setaria pallide-fusca</i> (cattail grass)	(caryopsis) 1.6 x 1.0	600 µm (USS # 30)
<i>Solanum torvum</i> (turkeyberry)	(seed) 1.5 x 1.0	600 µm (USS # 30)
<i>Tridax procumbens</i> (coat buttons)	(achene) 1.5 x 0.5	300 µm (USS # 50)
<i>Urochloa panicoides</i> (liverseed grass)	(caryopsis) 2 x 1.5	850 µm (USS # 20)

- 1 Derived from scientific literature and measuring herbarium specimens.
- 2 Smaller-pored screens may be used.
- 3 *Pennisetum clandestinum* **only** if admissible under 7CFR 319.24 and 7CFR 319.41.

**Procedures**

Special Procedures for Authorizing the Grinding of Commodities Contaminated with Federal Noxious Weed Seeds

**TABLE 2-14 Pore Diameters of U.S. Standard Screens (not part of the job aid)**

Standard Screen (mm)	Opening Dimension Exceeded By No More than 5 Percent of the Openings (mm)	Alternate Screen Designation	Port Diameter (mm) Based on Opening Dimensions
0.150	0.174	USS # 100	0.246
0.180	0.207	USS # 80	0.293
0.212	0.242	USS # 70	0.342
0.250	0.283	USS # 60	0.400
0.300	0.337	USS # 50	0.477
0.355	0.396	USS # 45	0.560
0.425	0.471	USS # 40	0.666
0.500	0.550	USS # 35	0.778
0.600	0.660	USS # 30	0.933
0.710	0.775	USS # 25	1.096
0.850	0.925	USS # 20	1.308
1.00	1.080	USS # 18	1.527
1.18	1.270	USS # 16	1.796
1.4	1.505	USS # 14	2.128
1.7	1.820	USS # 12	2.574
2.00	2.135	USS # 10	3.193
2.36	2.515	USS # 8	3.557
2.80	2.975	USS # 7	4.207
3.35	3.55	USS # 6	5.020
4.00	4.23	USS # 5	5.982

Standard screen size indicates measurement of the side of a square pore.

Diameter = the square root of the (side-size squared x 2).

## Screenings

Screenings are regulated to prevent the entry of noxious weeds. To regulate screenings, see [Table 3-41](#) on page 3-48.

### Special Procedures for Packaging and Mailing Samples of Screenings

The target for these special procedures is noxious weeds. If you have samples of screenings that need to be sent for identification, then follow the directions below for packaging and mailing:

1. Pour the screenings into a plastic bag.
2. Secure the plastic bag with a rubber band or a string.

**Never** use staples to secure a plastic bag that contains screenings.

3. Use a separate cloth bag and place the plastic bag inside the cloth bag (double bag).
4. Complete *PPQ Form 237, Record of Seed Offered for Importation Under the Federal Seed Act*.
5. Place the completed *Part 3* (pink copy) of PPQ Form 237 and the declaration of labeling (copy of the label and invoice) inside the cloth bag.
6. Secure the cloth bag (outer bag) by tying with the mailing tag.
7. Send the sample by **PRIORITY MAIL** to the following address:

Seed Examination Facility  
USDA-APHIS-PPQ  
Room 319, Building 308, BARC-East  
Beltsville, MD 20705

8. Give the completed *Part 4* (yellow copy) of PPQ Form 237 to the consignee or the consignee's agent.
9. Place the completed *Parts 1 and 2* (remaining white copies) of PPQ Form 237 in a separate envelope and send the envelope to the Seed Examination Facility by First Class Mail on the same day you send the sample.
10. If the importer has posted a performance bond, then you may allow the screenings to go forward to the owner's premises pending release by the Seed Examination Facility. Otherwise, hold the screenings until released by the Seed Examination Facility.

- **11.** Request additional bags, forms, and tags from the Seed Examination facility at the address listed above.

## Reference

---

### Contents

Introduction [page 3-1](#)

Identification of Protected Plants and Genera of Taxa Regulated Higher Than Genus  
[page 3-1](#)

Reference Tables [page 3-2](#)

---

### Introduction

The **Reference** chapter includes decision tables that provide the regulatory action to take on importations of unprocessed seeds, and information about external databases used to identify protected plants and genera of taxa regulated higher than genus.

---

### Identification of Protected Plants and Genera of Taxa Regulated Higher Than Genus

Infrequently, higher taxa are used in the **Reference Tables**, such as bamboo (Bambusoideae) and citrus (Rutaceae).

If you are unsure whether the unprocessed seeds are any of the following:

- ◆ Federal noxious weeds or parasitic plants
- ◆ Protected by CITES or ESA
- ◆ Regulated by taxa higher than genus (as the family, subfamily, and tribe)

then access external databases in the following order:

1. [GRIN](#) (Germplasm Resources Integrated Network, a taxonomic database that also identifies CITES-listed plants, ESA-listed plants, and Federal noxious weeds)
2. [Parasitic Plants Database](#)
3. [CITES Species Database](#)
4. [Federal Noxious Weed List](#)
5. [List of plants protected by ESA](#)
6. [List of spices](#)

## Reference Tables

The reference tables in this chapter are listed alphabetically by common name and include prohibitions, restrictions to be met, regulatory action to take, and authorities for the regulatory actions taken when encountering unprocessed seeds **not** intended for planting or growing. The regulatory actions also apply to unprocessed seeds arriving from Guam and Northern Mariana Islands.

If the regulated seeds require fumigation as a condition of entry, then **prohibit** entry to the seeds because Guam **does not** have fumigation facilities.

After collecting and reviewing the documents accompanying a consignment, then determine the admissibility of each kind of seed using the reference tables. (See [Step 1: Determine if Admissible or Prohibited](#) on page 2-6.) Some seeds are **not** listed in the reference tables. If the seeds are **not** listed, then use [Table 2-3](#) on page 2-7 of to determine admissibility.

Before using the reference tables, be aware of the following:

- ◆ Seeds, including nuts, are listed **only** if the regulations or previous instructions have specified the conditions of entry (treatments, prohibitions, restrictions, and import permits)
- ◆ Seeds are listed alphabetically by common names, **except** *Prunus* spp., *Ribes* spp., and *Solanum* spp., which have common names cross-referenced in the [Index](#)
- ◆ Seeds that are closely related or that have the same conditions of entry and regulatory actions are listed together. These seeds are as follows:
  - ❖ Corn and closely-related plants
  - ❖ Cucurbits (melon, squash, cucumber, and pumpkin)
  - ❖ Wheat, goatgrass, and their intergeneric crosses
- ◆ Higher taxa are used in some reference tables, such as for bamboo (Bambusaceae), citrus (Rutaceae), cucurbits (Cucurbitaceae). If you are unsure whether a genus is regulated by a higher taxa, then see the [Identification of Protected Plants and Genera of Taxa Regulated Higher Than Genus](#) on page 3-1 for direction about how to access GRIN and other related databases
- ◆ When you **do not** find the name of the seeds or nuts, then look in the [Index](#). If the seeds are **neither** in the reference tables **nor** the [Index](#), then you may be able to inspect the consignment and

release the seeds with oral permission if pest-free following the sampling and inspecting procedures in this manual. See [Step 2: Decide if You Need to Sample](#) on page 2-81

- ◆ Prohibited seeds may be imported for research or experimental purposes **only** under a Departmental permit issued by PPQ's Biological and Technical Services. Plant pests, including noxious weeds, may be imported for research or experimental purposes **only** under a validated PPQ Form 526, Application to Move Live Plant Pests and Noxious Weeds, that has been validated by PPQ's Biological and Technical Services (see Appendix A, [Permits and Foreign Phytosanitary Certificates](#))
- ◆ If you encounter seeds that are contained in used burlap or jute arriving from khapra beetle endemic countries<sup>1</sup>, then the consignment **must** be fumigated. Be aware that an additional treatment may be required depending on pest findings. REQUIRE an import permit under 7 CFR 319.75 and T306-c. HOLD the consignment and NOTIFY local PPQ that the shipment must be fumigated in order to meet entry requirements
- ◆ If you encounter articles that contain more than one kind of seed and one or more of the components of the mixture are listed in the tables that follow, then take action based on the most restrictive ingredient

**EXAMPLE**

If you were inspecting a consignment of wild bird seed originating in Mexico that listed as ingredients canola seed, flax seed, niger seed, and proso millet, then you would take action on the niger seed. Handicrafts, seed art, animal feed, and wild bird seed are articles that may be mixtures of seeds.

1 Afghanistan, Algeria, Bangladesh, Burkina Faso, Cyprus, Egypt, India, Iran, Iraq, Israel, Libya, Mali, Mauritania, Morocco, Myanmar, Niger, Nigeria, Pakistan, Saudi Arabia, Senegal, Sri Lanka, Sudan, Syria, Tunisia, and Turkey are khapra beetle endemic countries.

**Reference**

Reference Tables

**Acorn (*Quercus* spp.)**

Acorns are regulated to prevent the entry of *Curculio elephas*, *C. nuncum*, *Cydia splendana*, and *Hemimene juliana*. Use **Table 3-1** to regulate acorns.

**TABLE 3-1 Acorn (*Quercus* spp.)**

If the acorns were harvested in:	And the acorns are intended for:	Then:	Authority:
Canada	→	INSPECT and RELEASE	7CFR 319.56-11
Mexico	→	INSPECT and RELEASE	
Country <b>other than</b> listed above	Food or feed  Analytical, industrial, or other nonfood use	PROHIBIT ENTRY  1. REQUIRE an import permit <sup>1</sup> under 7CFR 319.56 2. REQUIRE T302-g-1 or T302-g-2 3. HOLD the consignment 4. NOTIFY local PPQ that the shipment <b>must</b> be treated in order to meet entry requirements	

1 If the importer **lacks** an import permit and the consignment is noncommercial that can be inspected 100 percent, then the permit requirements may be waived. Otherwise, HOLD the consignment and direct the importer to apply for a permit. See [Plant and Plant Products Permits](#) for instructions and information about permits.

### Avocado (*Persea* spp.)

Avocado seeds are regulated to prevent the entry of the avocado weevil, (*Heilipus lauri*), avocado seed moth (*Stenoma catenifer*), *Conotrachelus* spp., and fruit flies. Use **Table 3-2** to regulate avocado seeds.

**TABLE 3-2 Avocado (*Persea* spp.)**

If harvested in:	Then:	Authority:
Argentina, Belize, Bolivia, Brazil, Chile, Colombia, Costa Rica, Ecuador, El Salvador, Falkland Islands (Islas Malvinas), French Guiana, Guatemala, Guyana, Honduras, Mexico, Nicaragua, Panama, Paraguay, Peru, South Georgia and the South Sandwich Islands, Suriname, Uruguay, Venezuela (countries of Central America, North America, and South America)	PROHIBIT ENTRY	7CFR 319.37
Country <b>other than</b> listed above	1. REQUIRE an import permit <sup>1</sup> under 7CFR 319.37 2. INSPECT and RELEASE	

- 1 If the importer **lacks** an import permit and the consignment is noncommercial that can be inspected 100 percent, then the permit requirements may be waived. Otherwise, HOLD the consignment and direct the importer to apply for a permit. Refer to [Plant and Plant Products Permits](#) for instructions and information about permits.

## Bamboo (Bambusoideae)

Bambusoideae is a subfamily of Poaceae and its tribes Bambuseae and Brachyelytreae include the genera and species of bamboo. A list of all genera and species of bamboo is provided in the GRIN database. For directions for how to access GRIN and other related databases, see [Identification of Protected Plants and Genera of Taxa Regulated Higher Than Genus](#) on page 3-1.

Seeds of bamboo are regulated from all countries to prevent the entry of bamboo smut, *Ustilago shiraiana*, and other exotic pathogens. Therefore, **prohibit** entry to seeds of Bambusoideae. Your authority is 7CFR 319.37.

**TABLE 3-3 Bamboo (Bambusoideae)**

If the bamboo seeds are from:	Then:	Authority:
All countries	PROHIBIT ENTRY	7 CFR 319.37

### Chestnut (*Castanea* spp.)

Chestnuts are regulated to prevent the entry of *Curculio elephas*, *C. nuncum*, *Cydia splendana*, and *Hemimene juliana*. Use [Table 3-4](#) to regulate chestnuts.

**TABLE 3-4 Chestnuts (*Castanea* spp.)**

If harvested in:	And destined to:	And:	Then:	Authority:
Canada		→	INSPECT and RELEASE	7CFR 319.56-11
Korea		→ Is accompanied by a PPQ Form 203 <sup>1</sup> endorsed by a PPQ officer in Korea	RELEASE	
		<b>Lacks</b> an endorsed PPQ Form 203	1. REQUIRE an import permit <sup>2</sup> under 7CFR 319.56 2. REQUIRE T101-t-1 3. HOLD consignment 4. NOTIFY local PPQ that the shipment <b>must</b> be treated in order to meet entry requirements	
Mexico		→	INSPECT and RELEASE	
Country <b>other than</b> listed above	Guam or Northern Mariana Islands	→	INSPECT and RELEASE	7CFR 330.105
	<b>Other than</b> Guam or Northern Mariana Islands	→	1. REQUIRE an import permit <sup>2</sup> under 7CFR 319.56 2. REQUIRE T101-t-1 3. HOLD consignment 4. NOTIFY local PPQ that the shipment <b>must</b> be treated in order to meet entry requirements	7CFR 319.56-11

- 1 PPQ Form 203 is a Foreign Site Certificate of Inspection and/or Treatment.
- 2 If the importer **lacks** an import permit and the consignment is noncommercial that can be inspected 100 percent, then the permit requirements may be waived. Otherwise, HOLD the consignment and direct the importer to apply for a permit. Refer to [Plant and Plant Products Permits](#) for instructions and information about permits.

## Citrus (Rutaceae)

The citrus family of Rutaceae includes all species of the subfamilies Aurantioideae, Rutoideae, and Toddalioideae. A list of all genera and species of citrus is provided in the GRIN database. For directions for how to access GRIN and other related databases, see [Identification of Protected Plants and Genera of Taxa Regulated Higher Than Genus](#).

Citrus seeds are regulated from all countries to prevent the entry of seed borne citrus diseases. Therefore, require an import permit under 7CFR 319.37. If the importer **lacks** an import permit and the consignment is noncommercial that can be inspected 100 percent, then the import permit requirement may be waived. Otherwise, HOLD the consignment and DIRECT the importer to apply for an import permit. Refer to [Plant and Plant Products Permits](#) for instructions and information about permits. Your authority is 7CFR 319.37.

## Coconut (*Cocos nucifera*)

Coconuts are regulated to prevent the entry of lethal yellowing and cadang disease. Begin at [Table 3-5](#) to regulate coconuts.

**TABLE 3-5 Coconut (*Cocos nucifera*)**

If harvested in:	And the consignment:	Then:	Authority:
◆ Costa Rica ◆ Jamaica	Is accompanied by a Costa Rican or Jamaican phytosanitary certificate stating that the coconuts are Malayan dwarf or Maypan variety	INSPECT and RELEASE (no import permit required)	7CFR 319.56
	Lacks the phytosanitary certificate described above	GO to <a href="#">Table 3-6</a>	
Country <b>other than</b> listed above	_____ →		

**TABLE 3-6 Coconut (*Cocos nucifera*) from Other Than Costa Rica or Jamaica**

If the coconuts:	And:	And the coconuts:	And:	And the:	Then:	Authority:
Have liquid	Any portion of the husks is present	Are <b>immature</b>	You can verify the coconuts were harvested in Thailand	Green, outer shell surface of the husks have been removed	INSPECT and RELEASE	7CFR 319.56
				Green, outer shell surface of the husks have <b>not</b> been removed	PROHIBIT ENTRY	7CFR 319.37
			You <b>cannot</b> verify that the coconuts were harvested in Thailand or they were harvested in <b>other than</b> Thailand	_____ →		
			Are mature	_____ →		
The husks were completely removed		Have sprouted	<b>No</b> sprout shows its first true leaves <sup>1</sup>	Fewer than 10 percent of the coconuts have sprouted	INSPECT and RELEASE	7CFR 319.56
				Ten percent or more of the coconuts have sprouted	◆ GIVE the importer an opportunity to cull the sprouted coconuts and devitalize, or ◆ PROHIBIT ENTRY	7CFR 319.37
			One or more of the sprouts show their first true leaves <sup>1</sup>	_____ →		
	Have <b>not</b> sprouted			_____ →	INSPECT and RELEASE	7CFR 319.56
<b>Lack</b> liquid				_____ →		

1 Coconuts first produce a hard sheath-like sprout which after growing 3 to 5 inches, splits allowing true leaves to emerge.

**Reference**

Reference Tables

**Coffee, Green Unroasted (cafe, java, *Coffea* spp.)**

Coffee is regulated to prevent the entry of Mediterranean fruit fly (*Ceratitis capitata*), coffee berry borer (*Hypothenemus hampei*), and *Hemileia vastatrix* that is an injurious rust disease of coffee. Use **Table 3-7** to regulate green unroasted coffee.

**TABLE 3-7 Coffee, Green Unroasted (cafe, java, *Coffea* spp.)**

<b>If the consignment is destined to:</b>	<b>And the consignment is:</b>	<b>And the consignment is:</b>	<b>And the coffee is:</b>	<b>Then:</b>	<b>Authority:</b>
<ul style="list-style-type: none"> <li>◆ Alaska</li> <li>◆ Continental United States</li> <li>◆ Guam</li> <li>◆ Northern Mariana Islands</li> <li>◆ U.S. Virgin Islands</li> </ul>	Samples	Transiting Hawaii or Puerto Rico	Packaged to prevent the escape of plant pests	ALLOW sample to move forward	7CFR 319.73
			Not packaged to prevent the escape of plant pests	1. REPACKAGE samples to prevent the escape of plant pests 2. ALLOW samples to move forward	
		Not transiting Hawaii or Puerto Rico	→	INSPECT and RELEASE	
	Other than samples	Transiting Hawaii or Puerto Rico	→	◆ PROHIBIT ENTRY ◆ <b>DO NOT</b> allow coffee to be discharged from the carrier	
			Not transiting Hawaii or Puerto Rico	→	
	<ul style="list-style-type: none"> <li>◆ Hawaii</li> <li>◆ Puerto Rico</li> </ul>	→	→	PROHIBIT ENTRY	

## Corn (*Zea mays*) and Closely-related Plants

The closely-related plants to corn include: *Chionachne* spp., *Coix* spp., *Echinochloa* spp., *Eleusine* spp., *Euchleana* spp., *Miscanthus* spp., *Panicum* spp., *Pennisetum* spp., *Polytoca* spp., *Sclerachne* spp., *Setaria* spp., *Sorghum* spp., *Trilobachne* spp., and *Tripsacum* spp.

Corn and its relatives are regulated to prevent the entry of exotic plant diseases including *Peronospora maydis*, *Sclerospora sacchari*, and other downy mildews; also *Physoderma zae-maydis* and *P. maydis*. Millets, close relatives of corn, are regulated to prevent the entry of exotic plant diseases including *Peronospora maydis*, *Sclerospora sacchari*, and other downy mildews; also *Physoderma zae-maydis* and *P. maydis*.

*Pennisetum*, a close relative of corn, is regulated to prevent the entry of exotic plant diseases.

Begin at **Table 3-8** to regulate seed importations of corn and closely related plants. If plant contaminants, see **Table 2-8** on page 2-15.

**TABLE 3-8 Corn (*Zea mays*) and Closely Related Plants**

If destined to:	And the seeds are:	And the outer shells are:	Then:	Authority:
◆ Guam			INSPECT and RELEASE	7CFR 319.37
◆ Northern Mariana Islands		→		
State or territory <b>other than</b> listed above	Corn ( <i>Zea mays</i> )	→	GO to <b>Table 3-9</b>	
	◆ Adlay ( <i>Coix</i> spp.)	Removed <sup>1</sup>	INSPECT and RELEASE	7CFR 319.24
	◆ Jacob's tears ( <i>Coix lacryma</i> )	Intact <sup>2</sup>	GO to <b>Table 3-10</b>	7CFR 319.41
	Millets of:	→	GO to <b>Table 3-28</b>	
	◆ <i>Echinochloa</i> spp.			
	◆ <i>Eleusine</i> spp.			
	◆ <i>Panicum</i> spp.			
	◆ <i>Setaria</i> spp.			
	Millet of <i>Pennisetum</i> spp.	→	GO to <b>Table 3-29</b>	
	Corn relatives <b>other than</b> listed above	→	GO to <b>Table 3-10</b>	

1 The remaining seed is grooved and about the size of a kernel of popcorn or smaller.

2 Looks like a lacquered teardrop, slightly larger than a kernel of field corn.

NOTIFY local PPQ that the shipment <b>must</b> be treated in order to meet entry requirements	7CFR 319.75
	Country <b>other than</b> listed above	INSPECT and RELEASE	7CFR 330.105

- 1 If the importer **lacks** an import permit and the consignment is noncommercial that can be inspected 100 percent, then the permit requirements may be waived. Otherwise, HOLD the consignment and direct the importer to apply for a permit. Refer to [Plant and Plant Products Permits](#) for instructions and information about permits.
- 2 **Do not** prohibit entry if the importer **lacks** a phytosanitary certificate.

2 A list of all genera and species of cucurbits is provided in the GRIN database. For directions for how to access GRIN and other related databases, see [Identification of Protected Plants and Genera of Taxa Regulated Higher Than Genus](#).

## Cumin (*Cuminum cyminum*)

Cumin seeds in jute or burlap bagging from khapra beetle endemic countries are regulated to prevent the entry of khapra beetle, *Trogoderma granarium*. Use [Table 3-13](#) to regulate cumin seeds.

**TABLE 3-13 Cumin (*Cuminum cyminum*)**

Reference Tables

---

**Cut Grass, Catch-fly Grass, White Grass (*Leersia* spp.)**

**Prohibit** entry to grass seeds (*Leersia* spp.). Your authority is 7CR 319.37.

## Dodder (*Cuscuta* spp.)

**Prohibit** entry. More than 150 *Cuscuta* spp. are parasitic plant pests. Non-indigenous species are also Federal noxious weeds.

Unprocessed dodder seeds may be found in herbal medicine consignments and labeled as: *Cuscuta chinensis* (Tu Si Zi in Chinese), *Cuscuta japonica* (Toshishi in Japanese), *Cuscuta* (Tosaja in Korean), and Semen Cuscutae<sup>3</sup>. The list of dodder trade names is **not** all inclusive, but contains the most commonly-used trade names.

If dodder is **not** the imported item but is a contaminant with other imported seed, then see [Contaminants](#) on page 2-12 and [Special Procedures for Authorizing the Grinding of Commodities Contaminated with Federal Noxious Weed Seeds](#) on page 2-18.

If the seeds have been crushed or processed in the form of an extract, liquid, or powder, or individual ready-to-steep tea bags, then see the *Miscellaneous and Processed Products Manual*.

---

3 Semen Cuscutae is a pharmaceutical name and is **not** a botanical name.

## Elm (*Ulmus* spp.)

Elm seeds are regulated to prevent the entry of the elm mottle virus. Use [Table 3-14](#) to regulate elm seeds.

**TABLE 3-14 Elm (*Ulmus* spp.)**

<b>If harvested in:</b>	<b>Then:</b>	<b>Authority:</b>
Europe <sup>1</sup>	PROHIBIT ENTRY	7CFR 319.37
<b>Other than</b> Europe	INSPECT and RELEASE	

- 1 The recognized countries of Europe, **not** dependencies and/or territories are as follows: Albania, Andorra, Armenia, Austria, Azerbaijan, Belarus, Belgium, Bosnia and Herzegovina, Bulgaria, Croatia, Cyprus, Czech Republic, Denmark, Estonia, Finland, France, Georgia, Germany, Greece, Hungary, Iceland, Ireland, Italy, Latvia, Liechtenstein, Lithuania, Luxembourg, Macedonia, Malta, Moldova, Monaco, Netherlands, Norway, Poland, Portugal, Romania, San Marino, Serbia and Montenegro (formerly Yugoslavia), Slovakia, Slovenia, Spain, Sweden, Switzerland, Ukraine, United Kingdom, Vatican City.

## Faba Bean, Horsebean (*Vicia faba*)

Faba beans are regulated to prevent the entry of seed weevils, Bruchidae. Begin at [Table 3-15](#) to regulate faba beans.

**TABLE 3-15 Faba Bean, Horsebean (*Vicia faba*)**

If harvested in:	Then:	Authority:
Anguilla, Antigua and Barbuda, Bahamas, Barbados, Belize, British Virgin Islands, Canada, Cayman Islands, Costa Rica, Cuba, Dominica, Dominican Republic, El Salvador, Grenada, Guadeloupe, Guatemala, Haiti, Honduras, Jamaica, Martinique, Mexico, Montserrat, Nicaragua, Panama, Saint Barthélemy, St. Eustatius, St. Kitts and Nevis, St. Lucia, St. Martin, St. Vincent and the Grenadines, Turks and Caicos Islands (countries in Central America, North America, West Indies)	INSPECT and RELEASE	7CFR 319.37
Country or region <b>other than</b> listed above	GO to <a href="#">Table 3-16</a>

More than 1 pound	Sample or non-commercial lot	—————→		
	Commercial lot	No whole seeds in the consignment	1. REQUIRE an import permit <sup>1</sup> under 7CFR 319.56 2. REQUIRE T101-c-2 or T101-d-2 3. HOLD the consignment 4. NOTIFY local PPQ that the shipment <b>must</b> be treated in order to meet entry requirements	
		Whole seed in the consignment		

- 1 If the importer **lacks** an import permit and the consignment is noncommercial that can be inspected 100 percent, then the permit requirements may be waived. Otherwise, HOLD the consignment and direct the importer to apply for a permit. See [Plant and Plant Products Permits](#) for instructions and information about permits.

### Goatgrass (*Aegilops* spp. and its intergeneric crosses)

Wheat and its relatives are regulated to prevent the entry of injurious pests and pathogens. Use **Table 3-17** to regulate seeds of *Aegilops* spp. and its intergeneric crosses. See also **Wheat (*Triticum* spp. and its intergeneric crosses)**.

Important

Confirm the origin of the grain as grain is transshipped from many ports. The port of transshipment **does not** necessarily reflect the country in which the grain was harvested.

**TABLE 3-17 Goatgrass (*Aegilops* spp. and its intergeneric crosses)**

If the seeds are destined to:	And the seeds were harvested in:	And the consignment:	Then:	Authority
Guam	_____	_____ →	INSPECT and RELEASE	7CFR 330.105
State or territory <b>other than</b> Guam	Mexico	Is accompanied by a phytosanitary certificate listing the state of origin of the goat grass and an additional declaration stating that "The grain originated in an area where Karnal bunt is <b>not</b> known to occur <sup>1</sup> , as attested to by either survey results, or by testing for bunted kernels or spores"	INSPECT and RELEASE	7CFR 319.59
		<b>Lacks</b> the certification specified in the cell above	PROHIBIT ENTRY	
	Afghanistan, Algeria, Armenia, Australia, Azerbaijan, Bangladesh, Belarus, Bulgaria, Chile, China, Cyprus, Egypt, Estonia, Falkland Islands, Georgia, Greece, Guatemala, Hungary, India, Iran, Iraq, Israel, Italy, Japan, Kazakhstan, Kyrgyzstan, Latvia, Libya, Lithuania, Moldova, Morocco, Nepal, North Korea, Oman, Pakistan, Portugal, Romania, Russia, Spain, Tajikistan, Tanzania, Tunisia, Turkey, Turkmenistan, South Africa, South Korea, Ukraine, Uzbekistan, or Venezuela	_____ →		
	A country <b>other than</b> listed above	_____ →	INSPECT and RELEASE	7CFR 330.105

1 The areas where Karnal bunt is **not** known to occur include the States of Chihuahua, Guanajuato, Jalisco, Michoacan, Queretaro and the Mexicali valley of Baja California and Sonora.

### Hemp/Marijuana (*Cannabis sativa*)

Although **not** regulated specifically by APHIS regulations, the seeds may be banned as a controlled substance based on the subspecies. Marijuana seed is **prohibited** since it can be used to grow marijuana plants; and is the source of a depressant drug that slows down messages being sent to the brain and the central nervous system.

**TABLE 3-18 Hemp/Marijuana (*Cannabis sativa*)**

If you:	Then:
Can confirm that the seeds are hemp <sup>1</sup> ( <i>Cannabis sativa</i> ssp. <i>sativa</i> )	CONTACT a Customs and Border Protection supervisor or officer to determine admissibility
Can confirm that the seeds are marijuana <sup>2</sup> ( <i>Cannabis sativa</i> ssp. <i>indica</i> )	CONTACT a Customs and Border Protection supervisor or officer to determine admissibility

- 1 Hemp seeds may be used as a cereal (much like oatmeal), for the extraction of oil, and as an ingredient in birdseed.
- 2 Other names for Marijuana include Indian hemp, hash, and hashish.

**FIGURE 3-1 Hemp/Marijuana (*Cannabis sativa*) Seed**

**Reference**Reference Tables

---

**Hibiscus (*Hibiscus* spp.)**

*Hibiscus* seed, like those of cotton seed, are regulated to prevent the entry of pink bollworm, *Pectinophora gossypiella*. Use **Table 3-19** to regulate consignments of hibiscus seed.

**TABLE 3-19 Hibiscus (includes seed of kenaf, mallow, roselle, and sorrel)**

<b>If the consignment is for:</b>	<b>Then:</b>	<b>Authority:</b>
Food or feed	PROHIBIT ENTRY	7CFR 319.08
Analytical, industrial, or other nonfood use	<ol style="list-style-type: none"><li>1. REQUIRE T302-d</li><li>2. HOLD the consignment</li><li>3. NOTIFY local PPQ that the shipment <b>must</b> be treated in order to meet entry requirements</li></ol>	7CFR 319.37

### Kola Nut (cola nut, *Cola* spp.)

Kola nuts are host to fruit flies (the pod) and various seed boring weevils (the nut). Use [Table 3-20](#) to regulate kola nuts.

**TABLE 3-20 Kola Nut (cola nut, *Cola* spp.)**

If the consignment is:	Then:	Authority:
Solely the nuts (fresh or dry)	INSPECT and RELEASE	7CFR 330.106
<ul style="list-style-type: none"> <li>◆ Nuts within its pod (fruit)</li> <li>◆ Nuts with pulp attached</li> </ul>	GO to the <i>Fruits and Vegetables Import Manual</i> to regulate the kola nuts as fresh fruits	7CFR 319.56

**Reference**

Reference Tables

**Lentils (*Lens* spp.)**

Lentils are regulated to prevent the entry of seed weevils (Bruchidae) and injurious rust diseases. Begin at **Table 3-21** to regulate lentils.

**TABLE 3-21 Lentils (*Lens* spp.)**

<b>If harvested in:</b>	<b>Then:</b>	<b>Authority:</b>
Anguilla, Antigua and Barbuda, Bahamas, Barbados, Belize, British Virgin Islands, Canada, Cayman Islands, Costa Rica, Cuba, Dominica, Dominican Republic, El Salvador, Grenada, Guadeloupe, Guatemala, Haiti, Honduras, Jamaica, Martinique, Mexico, Montserrat, Nicaragua, Panama, Saint Barthélemy, St. Eustatius, St. Kitts and Nevis, St. Lucia, St. Martin, St. Vincent and the Grenadines, Turks and Caicos Islands (countries in Central America, North America, West Indies)	INSPECT and RELEASE	7CFR 319.37
Country or region <b>other than</b> listed above	GO to <b>Table 3-22</b>	

**TABLE 3-22 Lentils (*Lens* spp.) from Other Than Canada, Central America, Mexico, North America, West Indies**

<b>If the consignment weighs:</b>	<b>And the consignment is a:</b>	<b>And there are:</b>	<b>Then:</b>	<b>Authority:</b>
1 pound or <b>less</b>	_____	—————▶	INSPECT and RELEASE	7CFR 319.37
<b>More than 1 pound</b>	Sample or non-commercial lot	—————▶	1. HOLD the consignment 2. REQUIRE T101-e-1 3. NOTIFY local PPQ that the shipment <b>must</b> be treated in order to meet entry requirements	
	Commercial lot	<b>No</b> whole seeds in the consignment <sup>1</sup>		
		Whole seeds in the consignment		

1 Decorticated (outer covering removed) lentils are **not** whole.

### Macadamia Nut (*Macadamia spp.*)

Macadamia nuts are regulated to prevent the entry of general feeders, specifically Lepidoptera. Use **Table 3-23** to regulate macadamia nuts.

**TABLE 3-23 Macadamia Nut (*Macadamia spp.*)**

<b>If the nuts have:</b>	<b>And the nuts were harvested in:</b>	<b>Then:</b>	<b>Authority:</b>
Husks or shells	St. Eustatius	1. REQUIRE an import permit <sup>1</sup> under 7CFR 319.56 2. INSPECT and RELEASE	7CFR 319.56
	<b>Other than</b> St. Eustatius	PROHIBIT ENTRY	
<b>No husks and no shells</b>	—————▶	INSPECT and RELEASE	7CFR 330.105

- 1 If the importer **lacks** an import permit and the consignment is noncommercial that can be inspected 100 percent, then the permit requirements may be waived. Otherwise, HOLD the consignment and direct the importer to apply for a permit. Refer to [Plant and Plant Products Permits](#) for instructions and information about permits.

**Reference**Reference Tables

---

**Mahoberberis (*Mahoberberis* spp.)**

Mahoberberis seeds are regulated to prevent the entry of new races of black stem rust, *Puccinia graminis* f. spp. *tritici*. Therefore, PROHIBIT ENTRY to mahoberberis seeds. Your authority is 7 CFR 319.37.

**TABLE 3-24 Mahoberberis (*Mahoberberis* spp.)**

<b>If the seeds are:</b>	<b>Then:</b>	<b>Authority</b>
Mahoberberis	PROHIBIT ENTRY	7 CFR 319.37

## Mango (*Mangifera* spp.)

Mango seeds are regulated to prevent the entry of mango seed weevils, *Sternochetus* spp. Use [Table 3-25](#) to regulate mango seeds.

**TABLE 3-25 Mango (*Mangifera* spp.)**

If the mango seeds were harvested in:	And destined to:	Then:	Authority:
Anguilla, Antigua and Barbuda, Argentina, Bahamas, Belize, Bolivia, Brazil, Cayman Islands, Chile, Colombia, Costa Rica, Cuba, Dominican Republic, Ecuador, El Salvador, Falkland Islands (Islas Malvinas), Guatemala, Guyana, Haiti, Honduras, Jamaica, Nicaragua, Panama, Paraguay, Peru, Saint Barthélemy, St. Eustatius, St. Kitts and Nevis, St. Martin, South Georgia and the South Sandwich Islands, Suriname, Turks and Caicos Islands, Uruguay, or Venezuela		INSPECT and RELEASE	7CFR 330.105
Country <b>other than</b> listed above	◆ Guam ◆ Hawaii ◆ Northern Mariana Islands	INSPECT and RELEASE	7CFR 330.105
	<b>Other than</b> Guam, Hawaii, or Northern Mariana Islands	PROHIBIT ENTRY <sup>1</sup>	7CFR 319.37

- 1 This prohibition **does not** extend to seeds of the African bush mango (*Irvingia* spp.), an entirely different plant. The seeds of the African bush mango are called ogbono, etima, odika, or dika nuts.

**Mexican Jumping Beans (seeds of *Sebastiania pavoniana* or *Sebastiania bilocularis* of the family Euphorbiaceae)**

Jumping beans are tan to brown seeds in which the egg of a small moth (*Cydia deshaisiana*) has been laid. It is the moth's feeding larva moving inside the seed which makes the beans jump. Use **Table 3-26** that follows to determine admissibility.

**TABLE 3-26 Mexican Jumping Beans**

If your inspection reveals:	Then:	Authority:
No external pests (hitchhikers) or disease	RELEASE <sup>1</sup>	7CFR 330
External pests (hitchhikers) or disease	1. HOLD the consignment 2. CONTACT APHIS Identifier through proper channels	

1 The jumping bean moth larva consumes **only** *Sebastiania* seeds and is therefore of **no** economic importance as an agricultural pest. However, inform the importer or the importer's agent that the State of Hawaii lists *Cydia deshaisiana* as a prohibited species.

**FIGURE 3-2 Mexican Jumping Bean 10X**

### **Millets and Pseudo-Millets (various genera)**

Millets and pseudo millets (various genera) include various cereal and forage grasses which bear an abundance of small roundish grains. Millets may be close relatives of corn are regulated to prevent the entry of exotic cereal diseases. Continue to **Table 3-27** on page 3-30.

**Reference**

Reference Tables

## Screenings

Screenings are the chaff, immature seeds, inert matter, sterile florets, weed seeds, and other material removed in any way from any seeds in any kind of cleaning or processing; and which contain less than 25 percent of live agricultural or vegetable seeds. Screenings are imported for processing and used chiefly as food for livestock.

To determine which seeds are classified as agricultural and which seeds are classified as vegetable, see *A List of Agricultural and Vegetable Seed Regulated* by the Federal Seed Act.

Screenings are regulated to prevent the entry of noxious weeds. To regulate screenings from Canada, see **Table 3-41** on page 3-48. To regulate screenings from other than Canada, see **Table 3-42** on page 3-49.

If you have a sample of screenings that you need to send for identification, then see [Special Procedures for Packaging and Mailing Samples of Screenings](#) on page 2-23.

**Sweet Pea and Other Peas of *Lathyrus* spp.**

*Lathyrus* spp. includes the following peas: caley, chickling, everlasting, flat, grass, perennial, rough, sweet, tangier, and yellow. *Lathyrus* spp. are regulated to prevent the entry of general feeders, especially bruchids. Use **Table 3-47** to regulate peas of *Lathyrus* spp.

**TABLE 3-47 Sweet Pea and Other Peas in the Genus *Lathyrus* spp.**

If the peas are harvested in:	And the peas are intended for:	Then:	Authority:
Belize, Canada, Costa Rica, El Salvador, Guatemala, Honduras, Mexico, Nicaragua, or Panama		INSPECT and RELEASE	7CFR 319.37
Country or region <b>other than</b> listed above	Food or feed	1. REQUIRE an import permit <sup>1</sup> under 7CFR 319.37 2. REQUIRE T101-e-1 3. HOLD consignment 4. NOTIFY local PPQ that the shipment <b>must</b> be treated in order to meet entry requirements	
	Analytical, industrial, or other non-food use	1. REQUIRE an import permit <sup>1</sup> under 7CFR 319.37 2. REQUIRE T203-a-2 3. HOLD consignment 4. NOTIFY local PPQ that the shipment <b>must</b> be treated in order to meet entry requirements	

1 If the importer **lacks** an import permit and the consignment is noncommercial that can be inspected 100 percent, then the permit requirements may be waived. Otherwise, HOLD the consignment and direct the importer to apply for a permit. Refer to [Plant and Plant Products Permits](#) for instructions and information about permits.

### Vetch (*Vicia* spp. Other Than *V. faba*)

Vetch seeds are regulated to prevent the entry of general feeders, especially bruchids.

Use **Table 3-48** to regulate vetch seeds **other than** *Vicia faba*. If the seeds are *V. faba* (faba beans), then see [Faba Bean, Horsebean \(\*Vicia faba\*\)](#) on page 3-19 and **Table 3-15**.

**TABLE 3-48 Vetch (*Vicia* spp. Other Than *V. faba*)**

If harvested in:	Then:	Authority:
Belize, Canada, Costa Rica, El Salvador, Guatemala, Honduras, Mexico, Nicaragua, or Panama	INSPECT and RELEASE	7CFR 319.37
Country or region <b>other than</b> listed above	1. REQUIRE an import permit <sup>1</sup> under 7CFR 319.37 2. REQUIRE T101-e-1 3. HOLD consignment 4. NOTIFY local PPQ that the shipment <b>must</b> be treated in order to meet entry requirements	

- 1 If the importer **lacks** an import permit and the consignment is noncommercial that can be inspected 100 percent, then the permit requirements may be waived. Otherwise, HOLD the consignment and direct the importer to apply for a permit. Refer to [Plant and Plant Products Permits](#) for instructions and information about permits.

**Wheat (*Triticum* spp. and its intergeneric crosses)**

Wheat and its relatives are regulated to prevent the entry of injurious pests and pathogens. Use **Table 3-49** to regulate seeds of *Triticum* spp. and its intergeneric crosses. See also **Goatgrass (*Aegilops* spp. and its intergeneric crosses)**.

Important

Confirm the origin of the grain as grain is transshipped from many ports. The port of transshipment **does not** necessarily reflect the country in which the grain was harvested.

**TABLE 3-49 Wheat (*Triticum* spp. and its intergeneric crosses)**

If the seeds are destined to:	And the seeds were harvested in:	And the consignment:	Then:	Authority
Guam		→	INSPECT and RELEASE	7CFR 330.105

### Introduction

This appendix provides administrative and operational policies regarding permits and foreign phytosanitary certificates that are encountered when regulating agricultural products imported for other than planting purposes.

This appendix **does not** cover the following topics:

- ◆ Permits and foreign phytosanitary certificates for plants and plant products imported for planting purposes (see MCFR 319.37, *Port of Entry Manual*)
- ◆ Animal product certificates (see the *Animal Product Manual*)

The three kinds of permits encountered in agricultural quarantine inspections are as follows:

- ◆ ***PPQ Permits***
- ◆ ***VS Permits***
- ◆ ***CITES Permits***

## PPQ Permits

PPQ permits are written permission to import plant material. PPQ permits are issued by USDA-APHIS-PPQ and are authorized by the Plant Protection Act.

The purposes of PPQ permits are as follows:

- ◆ Provide contact with importers in order to exchange information
- ◆ Inform importers of agricultural regulations and conditions of entry that **must** be met, such as treatments or designated ports of entry
- ◆ Inform PPQ and CBP of the importers' intentions
- ◆ Strengthen the ability to exclude prohibited material and thereby keep out plant pests
- ◆ Verify that importers had prior knowledge of agricultural regulations

### Oral Permission

At their discretion, PPQ or CBP regulatory officials may provide oral permission at the time of inspection. The regulatory official's oral permission is appropriate for noncommercial importations of admissible plant material. Noncommercial means for personal use, **not** for resale or other commercial use. Admissible material are items that are generally unrestricted. If a plant product is admissible, then the regulatory action listed in the **Reference** is to inspect and release. When all import requirements are met based on a regulatory inspection, then oral permission may be adequate for noncommercial importations of admissible plant material.

### Written Permits

USDA-APHIS-PPQ Permits, Registrations, Imports, and Manuals (PRIM), issue written permits for commercial importations of admissible plant material and for the movement of live plants pests, pathogens, and Federal noxious weeds. The written permits covered in this appendix are as follows:

- ◆ **PPQ Form 526**, *Application for Permit to Move Live Plant Pests or Noxious Weeds*
- ◆ **PPQ Form 597**, *Import Permit for Plant and Plant Products*

Consignments of 13 or more articles of admissible plant material require a written permit, as opposed to smaller importations that **do not**. Written permits instruct the importer to purchase and to handle

agricultural plant material in a manner that minimizes pest risk. Additionally, written permits verify that importers are aware of the conditions of entry.

Written permits **do not** automatically authorize entry. PPQ and CBP regulatory officials **must** validate the accuracy of permits by matching with the shipments and importers to confirm that the conditions of entry are met. Usually importations accompanied by a written permit are referred to secondary and then authorized movement to the nearest PPQ plant inspection station for processing because this is a time consuming effort.

### PPQ Form 526

*PPQ Form 526, Application for Permit to Move Live Plant Pests or Noxious Weeds*, is the application as well as the permit that authorizes movement of live plant pests, Federal noxious weeds or parasitic plants imported for scientific and educational research. USDA-APHIS-PPQ PRIM issues these permits for Federal noxious weeds and plant pests under the Plant Protection Act (PPA). This form is also authorizes the movement of bees and bee related articles (like pollen and honey utilized as bee feed) issued under the authority of the PPA and Honey Bee Act.

Unless specifically authorized, importers may **no** longer hand carry permitted pests using a PPQ Form 526. Where authorized, the steps that **must** be followed will be spelled out on the permit.

Along with the PPQ Form 526, USDA-APHIS-PPQ PRIM generally issues a supply of red and white labels, PPQ Form 599, for the importer to affix to packages of live plant pests and pathogens. See [Table A-1](#) for instructions about how to process red and white labeled packages.

**TABLE A-1 How to Process Red and White (PPQ Form 599) Labeled Packages**

If a package with an affixed red and white label is encountered in:	Then REFER the package to:
Cargo under bonded carrier	 <p><b>Do not</b> open the package!</p> <p>CBP agricultural specialist, who will:</p> <ol style="list-style-type: none"> <li>1. CONFIRM that the conditions of the permit have been met</li> <li>2. INSPECT the package without opening to ensure that it is <b>not</b> damaged or leaking</li> <li>3. SEND the package directly to the nearest PPQ Plant Inspection Station</li> </ol>
Passenger baggage hand carried by the importer	 <p><b>Do not</b> open the package!</p> <p>Secondary where a CBP agricultural specialist will:</p> <ul style="list-style-type: none"> <li>◆ CONFIRM whether the conditions on the permit are met</li> <li>◆ If the condictions on the permit are <b>not</b> met, then the CBP agricultural specialist will:           <ol style="list-style-type: none"> <li>1. SEIZE the package</li> <li>2. SEND the package to the nearest PPQ Plant Inspection Station for destruction,</li> </ol> </li> </ul>

Importers apply for a permit to move live plant pests, pathogens, or Federal noxious weeds by completing Section A of PPQ Form 526, Application for Permit to Move Live Plants Pests or Noxious Weeds. Importers may call USDA-APHIS-PPQ Permit Services toll free at 1-877-770-5990 or go to the following web site address:

[http://www.aphis.usda.gov/permits/ppq\\_epermits.shtml](http://www.aphis.usda.gov/permits/ppq_epermits.shtml)

**PPQ Form 597**

PPQ Form 597, Import Permit for Plant and Plant Products, is a written permit issued by USDA-APHIS-PPQ Permit Services to authorize the importation of regulated plants and plant products for a specified period. General guidelines for handling written permits are described in this appendix. Following the general guidelines are those for handling the following special categories of written permit:

- ◆ **Departmental Permits**
- ◆ **Transit Permits**

PPQ Form 597 are issued and numbered using the specific subpart of the Code of Federal Regulations in Block 4, under which the plants or plant products are regulated. Similarly, if a plant product requires a written permit as a condition of entry, that plant product is listed in the *Reference* chapter of this manual as requiring an import permit along with the regulatory authority (see examples below).

<b>EXAMPLE</b>	<ol style="list-style-type: none"> <li>1. Foreign cotton and covers are regulated by subpart 8 of 7CFR 319. The regulatory authority in Block 4 is 7CFR 319.8 and the permit number in Block 1 is 8 followed by a number representing an issuance scheme.</li> <li>2. Sugarcane products and by-products such as sugarcane juice (including parts of the sugarcane plant) are regulated by subpart 15 of 7CFR 319. The regulatory authority in Block 4 is 7CFR 319.15 and the permit number in Block 1 is 15 followed by a number representing an issuance scheme.</li> <li>3. Logs, lumber, and other unmanufactured wood products are regulated by subpart 40 of 7CFR 319. The regulatory authority in Block 4 is 7CFR 319.40 and the permit number in Block 1 is 40 followed by a number representing an issuance scheme.</li> <li>4. Corn or maize, broomcorn, and related plants of corn are regulated by subpart 41 of 7CFR 319. The regulatory authority in Block 4 is 7CFR 319.41 and the permit number in Block 1 is 41 followed by a number representing an issuance scheme.</li> <li>5. Rice and rice related articles such as tatami mats made from rice straw are regulated by subpart 55 of 7CFR 319. The regulatory authority in Block 4 is 7CFR 319.55 and the permit number in Block 1 is 55 followed by a number representing an issuance scheme.</li> <li>6. Approved, fresh fruits and vegetables (including fresh herb and sprouts) are regulated by subpart 56 of 7CFR 319. The regulatory authority in Block 4 is 7CFR 319.56 and the permit number in Block 1 is 56 followed by a number representing an issuance scheme.</li> </ol>
----------------	--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------

For many generally admissible plant material (inspect and release), a one-time-only written permit may be issued at the time of inspection by a PPQ or CBP regulatory official. These situations are rare when an importer plans **no** more than one commercial importation of plant material that **does not** require post entry growing.

If an importer presents an expired permit (refer to Block 2), then the PPQ or CBP regulatory official may allow the importer to complete an application for a new permit using PPQ Form 587, Application for Permit to Import Plants or Plant Products. Once the permit application is approved, the importation can be cleared provided all entry conditions and requirements are met. Because this is a time

consuming effort, usually importations awaiting approval are referred to secondary and then authorized movement to the nearest PPQ Plant Inspection Station for processing.

If the importer **lacks** an import permit when one is required and the shipment is noncommercial that can be inspected 100 percent, then the import permit requirement may be waived. Otherwise, HOLD the shipment and direct the importer to apply for a permit by completing PPQ Form 587, Application for Permit to Import Plants or Plant Products. For wood products, the importer completes PPQ Form 585, Application for Permit to Import Timber or Timber Products. For soil, the importer completes PPQ Form 525A, Application for Permit to Receive Soil. Importers may go to the following web site address: [http://www.aphis.usda.gov/permits/ppq\\_epermits.shtml](http://www.aphis.usda.gov/permits/ppq_epermits.shtml) or call USDA-APHIS-PPQ Permit Services at 1-877-770-5990.

### Processing Written (Import) Permits

If an importation of plant products requiring a written permit is encountered in cargo, then refer the importation to a CBP agricultural specialist. If an importation of plant products requiring written permit is encountered in passenger baggage, then refer the importation to secondary.

CBP agricultural specialist will do the following:

1. Confirm that the permit is valid (not expired) and appropriate for the plant products being imported
2. Hold the shipment and direct the importer to apply for a permit if the permit is expired or inappropriate<sup>1</sup>
3. Confirm that the conditions of the permit have been met
4. If the conditions and requirements have been met, then release or control as specified on the permit

Along with the PPQ Form 597, USDA-APHIS-PPQ Permit Services sometimes issues a supply of green and yellow labels, PPQ Form 505, for the importer to affix to packages of quarantine plant material that constitute a higher risk. (See **Table A-2** for instructions about how to process green and yellow labeled packages.)

---

<sup>1</sup> Importers may call USDA-APHIS-PPQ Permit Services toll free at 1-877-770-5990 or go to the following web site address: <<http://www.aphis.usda.gov/ppq/permits>>.

**TABLE A-2 How to Process Green and Yellow (PPQ Form 505) Labeled Packages**

If a package with an affixed green and yellow Label is encountered in:	Then REFER the package to:
Cargo	<div data-bbox="846 436 954 506" style="border: 1px solid black; background-color: yellow; padding: 2px; display: inline-block;">CAUTION</div> <div data-bbox="976 422 1474 520" style="background-color: #e0f2f1; padding: 5px; display: inline-block;"> <p><b>Do not</b> open the package!</p> </div> <p>CBP agricultural specialist, who will:</p> <ol style="list-style-type: none"> <li>1. CONFIRM that the conditions of the permit have been met</li> <li>2. INSPECT the package without opening to ensure that it is <b>not</b> damaged or leaking</li> <li>3. RE-LABEL and SEND the package directly to the nearest PPQ Plant Inspection Station</li> </ol>
Passenger baggage	<div data-bbox="846 795 954 865" style="border: 1px solid black; background-color: yellow; padding: 2px; display: inline-block;">CAUTION</div> <div data-bbox="976 781 1474 879" style="background-color: #e0f2f1; padding: 5px; display: inline-block;"> <p><b>Do not</b> open the package!</p> </div> <p>Secondary where a CBP agricultural specialist will:</p> <ol style="list-style-type: none"> <li>1. CONFIRM that the conditions of the permit have been met</li> <li>2. INSPECT the package without opening to ensure that it is <b>not</b> damaged or leaking</li> <li>3. RE-LABEL and SEND the package directly to the nearest PPQ Plant Inspection Station</li> </ol>

### Departmental Permits

USDA-APHIS-PPQ Biological and Technical Services, Permit Services, issue Departmental permits, which is a special category of written permit for the importation of small research samples of prohibited plants or plant products intended for experimental purposes. Departmental permits supersede the requirements in the import manuals and direct the regulatory official on how to proceed when clearing the importation at ports of entry.

The pest risk involved with importing prohibited plants and plant products under Departmental permit is relatively great because these plants or plant products are attacked by serious plant pests and diseases in the country of origin. Therefore, Departmental permits will **always** list specific safeguards or conditions tailored for the intended importation, which the importer **must** meet as a condition of entry.

Unlike other written permits, Departmental permits are issued **only** by USDA-APHIS-PPQ Permit Services.

PPQ or CBP regulatory officials at ports of entry are **never** authorized to issue permits for prohibited plants and plant products.

Importers apply for Departmental permits by completing PPQ Form 588, Application for Permit to Import Prohibited Plants or Plant Products for Experimental Purposes. Importers may call USDA-APHIS-PPQ Permit Services toll free at 1-877-770-5990 or go to the following Web site address: [http://www.aphis.usda.gov/permits/ppq\\_epermits.shtml](http://www.aphis.usda.gov/permits/ppq_epermits.shtml)

Departmental permits are issued using PPQ Form 597, Import Permit for Plants and Plant Products. Written in Block 1 will be “DEPARTMENTAL PERMIT” followed by a series of numbers.

**Processing Departmental Permits**

Processing Departmental Permits as follows:

1. Obtain a copy of the Departmental permit (see [Table A-3](#)).

**TABLE A-3 Obtain a Copy of the Departmental Permit (PPQ Form 597)**

If the:	And the plants or plant products:	Then:
Importer or the port of entry office (local files or national databases) has a copy of the permit	→	GO to Step 2 below
Importer applied for a permit, but there is <b>no</b> copy at the port of entry	→	CONTACT USDA-APHIS-PPQ Permit Services through proper channels
Importer <b>did not</b> apply for a permit	Are destined to a research facility or educational institution	1. CONTACT USDA-APHIS-PPQ Permit Services through proper channels 2. If the prohibited material presents an imminent pest hazard, then ORDER the material DESTROYED or RE-EXPORTED
	Are <b>not</b> destined to a research facility or an educational institution	ORDER the material DESTROYED or RE-EXPORTED with the concurrence of the port supervisor or officer-in-charge

2. Ensure that the prohibited plants or plants products being imported are authorized by the Departmental permit.
  - A. If there is a discrepancy, then HOLD the importation under appropriate safeguards and CONTACT USDA-APHIS-PPQ Permit Services through proper channels.
  - B. If the importer is hand carrying the prohibited plants or plant products, then ensure that the permit authorizes hand carrying to the final destination. If authorized, then ALLOW the importer to hand carry the prohibited material in

accordance with the conditions listed on the permit. If **not** authorized, then CONTACT USDA-APHIS-PPQ Permit Services through proper channels.

3. If the package **must** be sent to USDA-APHIS-PPQ National Plant Germplasm and Biotechnology Laboratory, then ensure that the package is secure and has sufficient postage. Mail the package to the following address:

USDA-APHIS-PPQ  
Center for Plant Health Science and Technology  
National Plant Germplasm and Biotechnology Laboratory  
Building 580, BARC-EAST  
Beltsville, Maryland 20705

4. Follow the directions printed on the Departmental permit. Check that all conditions on the permit are met (see [Table A-4](#)).

<b>EXAMPLE</b>	Some conditions of entry on Departmental permits are as follows: <ul style="list-style-type: none"> <li>◆ Treat by USDA-APHIS-PPQ at port of entry</li> <li>◆ Inspect by a plant specialist named on the permit</li> <li>◆ Dispose of by autoclaving, incinerating, or grinding</li> </ul>
----------------	--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------

**TABLE A-4 Processing Departmental Permits**

If the shipment:	Then:
Meets the stated conditions of entry	Proceed as directed by the Departmental permit
<b>Does not</b> meet the stated conditions	<ol style="list-style-type: none"> <li>1. HOLD the plants or plant products under appropriate safeguards</li> <li>2. REFRIGERATE the plants or plant products if necessary</li> <li>3. REQUEST instructions from USDA-APHIS-PPQ Permit Services through proper channels</li> </ol>

### Transit Permits

USDA-APHIS-PPQ Biological and Technical Services, Permit Services issues transit permits for the unloading, landing, or other movement of plants and plant products in cargo and passenger baggage through the United States to ensure they are adequately safeguarded and re-exported in the specified time frame. Transit permits prescribe all required safeguarding or mitigation measures for the shipment based on a risk analysis. Transit permits are issued in accordance with 7CFR 352.

**Only** agricultural shipments moving as transportation and exportation (TE) cargo or immediate export (IE) cargo require a transit permit. Most shipments moving under Customs bond as in-transit (IT) cargo and as residue cargo are covered by other authorization

mechanisms, **except** for shipments of avocados from Mexico moving IT to inland-approved states which require a transit permit. Refer to the *Manual for Agricultural Clearance* for the action take on transiting plant products and on allowing movement of residue cargo.

Importers apply for transit permits by completing PPQ Form 586, Application for Permit to Transit Plants and/or Plant Products through the United States. Importers may call USDA-APHIS-PPQ Permit Services toll free at 1-877-770-5990 or go to the following web site address: [http://www.aphis.usda.gov/permits/ppq\\_epermits.shtml](http://www.aphis.usda.gov/permits/ppq_epermits.shtml)

---

## VS Permits

Veterinary Services (VS) permits are written permission to import prohibited or restricted animal products or by-products such as manure, eggs for food and hatching, egg by-products for research or other inedible purposes, dry milk products, blood, organs, organisms, and vectors imported for biological use and research. VS permits are issued by USDA-APHIS-VS to identify conditions of entry (that take precedence over those listed in the *Animal Product Manual*), to inform the importer of the conditions of entry, and to allow regulators to verify that importers had prior knowledge of VS requirements.

VS Form 16-6, United States Veterinary Permit for Importation and Transportation of Controlled Materials and Organisms and Vectors, is used mainly for commercial importations of restricted or prohibited animal products and by-products. VS Form 16-6A is used mainly for animal products and by-products imported for research, such as organisms and vectors.

When a VS permit authorizes the entry of an animal product or by-product, PPQ or CBP regulatory officials at the port of entry review the permit to verify the identifying number, expiration date, and destination address. Three asterisks will precede restrictions and precautions that **must** be confirmed as being met.

Refer to the *Animal Product Manual* for the background, procedures, and regulatory actions to enforce the regulations governing the import and export of animals products and by-products.

## CITES Permits

While the Convention on International Trade in Endangered Species (CITES) is a multi-national treaty regulated by the U.S. Fish and Wildlife Service, PPQ and CBP are designated to inspect protected plants and plant products moving in international commerce. The importation, exportation, and re-exportation of protected plants and plant products are restricted to designated ports (usually with PPQ Plant Inspection Stations) with qualified specialists, such as botanist, to process such shipments.

*PPQ Form 622, Protected Plant Permit*, is issued by USDA-APHIS-PPQ Permit Services for all importations, exportations, and re-exportations of plants and plant products that are regulated under the Endangered Species Action (50CFR 17) and CITES (50CFR 23). USDA regulation 7CFR 355 requires that importers possess a valid *Protected Plant Permit*, which is valid for 2 years. A *Protected Plant Permit* **does not** authorize entry into the United States, and is rarely seen in passenger baggage.

In addition to a *Protected Plant Permit*, importations of CITES Appendix I and CITES Appendix II plant material **must** be accompanied by an export certificate from the country of origin. Also, importations of CITES Appendix I plant material **must** have an import permit from the U.S. Fish and Wildlife Service.

Importers may apply for a *Protected Plant Permit* via [ePermits](#) or by completing *PPQ Form 621, Application for Protected Plant Permit to Engage in the Business of Importing, Exporting, or Re-exporting Terrestrial Plants*. Importers may go to the [ePermits](#) Web site and apply on-line or obtain a pdf of PPQ Form 621 which can be printed, completed, and mailed to the USDA-APHIS-PPQ Permit Services; or call 1-877-770-5990 for an application.

## Phytosanitary Certificates

Phytosanitary certificates are documents issued by an official of an exporting country, or country of re-export, attesting to freedom from pests and admissibility into the destination country for specific plants or plant products.

Phytosanitary certificates can be valid and accurate, yet still be insufficient to meet conditions of entry. Therefore, even when plants or plant products are accompanied by a phytosanitary certificate, PPQ and CBP regulatory officials inspect the importations to confirm admissibility.

In general, PPQ and CBP regulatory officials use phytosanitary certificates to perform the following tasks at the port of entry:

- ◆ Identify type of plants or plant products
- ◆ Identify area where plants or plant products were grown
- ◆ Determine if the plants or plant products were treated in country of origin and if so, identify the treatment
- ◆ Determine if quarantine requirements are met (growing season, preclearance)
- ◆ Confirm that plants or plant products meet specific certification requirements
- ◆ Determine how much of the shipment to inspect

**Do not** confuse phytosanitary certificates with import permits. A phytosanitary certificate is a statement of fact, while an import permit is an authorization to do something. In most instances, the lack of either document alone is **not** sufficient reason to deny entry to a shipment. Therefore, unless the *Reference* section of this manual instructs differently, PPQ and CBP regulatory officials should do the following when clearing an importation accompanied by a phytosanitary certificate:

1. If an importation **only lacks** a phytosanitary certificate, then **do not** prohibit entry to the shipment (refer to the *Reference* chapter of this manual for exceptions)
2. Inspect **all** importations of plants and plant products, **except** for those from Canada accompanied by a phytosanitary certificate
3. If there is an operational preclearance program for the imported plants or plant products in the country of origin, then inspection may be waived for precleared shipments bearing a U.S. Department of Agriculture release stamp on the foreign document. Occasionally spot check precleared shipments.

# Glossary

---

## Introduction

Use this *Glossary* to find the meaning of specialized words, abbreviations, acronyms, and terms used in regulating unprocessed seeds imported for purposes **other than** planting or growing. To locate where in the manual a given definition, term, or abbreviation is mentioned, use the [Index](#).

---

## Definitions, Terms, and Abbreviations

**areca nut.** See [betel nut](#).

**basmati rice.** Specialty rice with a long grain grown principally in India, Iran, Pakistan, and Sri Lanka; commonly contaminated with husks and paddy rice.

**bean.** Several plants of the genus *Phaseolus* or related plants (e.g., *Vigna unguiculata*, *V. radiata*, and *Glycine max*) bearing similar pods or seeds.

**betel nut.** Hard, nutmeg sized seed of the betel palm (*Areca catechu*). Used as a folk remedy, gnawed to clean teeth, or shaved and wrapped in betel leaves to be chewed as a stimulant or breath freshener. Also known as [areca nut](#).

**bran.** Seed husk or coat of a seed removed in milling.

**brown rice.** Rice that has been removed from the hulls but has **not** been polished and retains most of the bran layers, endosperm, and germ.

**bulk shipment.** Loose material in carriers, bulk containers, or in storage.

**cereal.** Member of the grass family in which the seed is the most important part used for food or feed.

**certificate.** Authorization to move a regulated commodity, most often indicated by stamping “Released” or “Treated and Released” on documents or containers.

**commercial shipment.** Goods that are imported for resale purposes or for profit (example corn imported for cattle feed); **not** for personal use.

**compliance agreement.** Written understanding in which a party agrees to follow PPQ procedures.

**contaminants.** Undesirable impurity, e.g., soil, animal manure, and weed seeds.

**corn, shelled.** Dried individual kernel which has been removed from the cob; generally imported for animal feed.

**cotton seed.** The seed of the cotton plant separated from lint (for propagation). Contrast with **polished rice**.

**cover.** Material that covers or is laid, placed, or spread over or upon cargo.

**crating.** Rigid shipping structure that consists of a wood frame of which the size and shape are determined by the commodity to be shipped.

**disease.** Interaction between a pathogen and the plant resulting in damage to the plant. The damage caused is referred to as a symptom.

**endemic.** Common and/or widespread in a particular place.

**fuzzy seed.** Linted cottonseed or that covered with short fibers that results from the cotton ginning process to remove the longer cotton fibers.

**hitchhiking pest.** Insects or other pests which are **not** directly associated with their host material and which move with cargo, in baggage, or at large in carriers.

**hull.** (noun) The dry outer covering of a fruit, seed, husk.

**hulled.** The hull or hulls have been removed.

**husk.** (noun) The membranous or green outer envelope of many fruits and seed, as of an ear of corn or a nut.

**husked.** The husk has been removed.

**husked rice.** Rice removed from the hulls but **not** polished and retaining most of the bran layers, endosperm, and germ.

**import permit.** [define import permit.]

**inspectional unit.** Portion of a shipment used to determine what size sample should be inspected. Also, quarantine action is taken on the inspectional unit.

**intergeneric.** Existing or occurring between genera (hybridization).

**kola nut.** Large, fleshy, and bitter caffeine-containing tree seed (*Cola* spp.) that is approximately the size of a chestnut and is chewed as a condiment and stimulant; seed erroneously called nuts. Also known as cola nut.

**legume.** Plant of the family Fabaceae characteristically bearing pods.

**medicinal seeds.** Those which are used for their curative powers, and are **not** to be planted.

**Mexican jumping-beans.** Seeds of several Mexican shrubs of the genera *Sebastiania* or *Sapium* of the family Euphorbiaceae that “jumps” because of the movement of the contained larva of a small moth, *Cydia dehaisiana*.

**milled.** Ground, pulverized, or broken down into small particles.

**millet.** Any of the several cereal grasses (or cereal crops) whose small grains are used for food and fodder.

**noncommercial.** Goods that are **not** imported for profit or resale, generally for personal consumption.

**Northern Mariana Islands.** Short form for the Commonwealth of the Northern Mariana Islands that is a group of islands in the North Pacific Ocean about three-quarters of the way from Hawaii to the Philippines. Includes Farallon de Pajaros, Maug Islands, Asuncion Islands, Agrihan, Pagan, Guguan, Sarigan, Anatahan, Farallon De Medinilla, Saipan, Tinian, Rota.

**noxious weeds.** Undesirable plant as specified by the Federal Noxious Weed Regulations. As defined by the Federal Noxious Weed Regulations, noxious weeds are, “Any living stage (including, but **not** limited to seeds and reproductive parts) of any parasitic or other plant or a kind, which is of foreign origin, is new to or **not** widely prevalent in the United States, and can directly or indirectly injure crops, other useful plants, livestock or poultry or other interests of agriculture, including irrigation or navigation or the fish or wildlife resources of the United States or the public health.”

**nut.** Hard shelled, woody-textured, one-celled fruit that **does not** split open as an acorn, coconut, or macadamia nut.

**packing material.** Covering, stuffing, or holding apparatus used to protect, cushion, or brace goods during shipment (e.g., straw, plant litter, paper, vermiculite).

**pallet.** Portable, wooden platform used for storing or moving cargo or freight.

**pathogen.** Organism that is capable of causing disease in a particular host or range of hosts. It obtains its nutrients wholly or in part from another living organism (example a microorganism such as a bacterium or fungus).

**polished rice.** Rice that has had the hulls removed, and most of the bran and starch cells rubbed off and screened out.

**processed seed.** That which has been subjected to any degree of alteration beyond harvesting, e.g., cracked corn.

**pulse.** Vegetables in the family Fabaceae (Leguminosae) that bear or produce edible pods or seeds, such as beans, chickpeas, cowpeas, lentils, peas, and vetches.

**rice polish.** Finely powdered material obtained in milling white rice. It consists of the inner bran layer with a little of the starch interior that is rubbed off the kernels.

**sample.** Portion that is representative of the whole; a specimen.

**seed.** Ripened ovule, enclosing a rudimentary plant and food necessary for its germination.

**screenings.** The chaff, immature seeds, inert matter, sterile florets, weed seeds, and other material removed in any way from any seeds in any kind of cleaning or processing; and which contain less than 25 percent of live agricultural or vegetable seeds.

**seed cotton.** Forms of unginmed cotton from which the seed has **not** been separated (**not** used for propagation). Contrast with **cotton seed**.

**seeds not for planting.** Whole intact seeds (including grains and nuts) imported for purposes **other than** planting or sowing.

**smut.** Various destructive diseases of cereal grasses caused by parasitic fungi characterized by the transformation of various plant organs into dark brown or black often dusty masses of spores.

**transit permit.** Document that authorizes movement of articles from regulated areas to specified points where host plants **do not** grow and where the regulated material is handled, utilized, processed, treated, or consumed in such a manner as to eliminate pest risk. An example when a transit permit would be required is the movement of uncertified cotton products to northern markets. Transit permits are issued on the basis that the commodities will **not** be transhipped to non-approved destinations, and that there will be conformity to the conditions of a compliance agreement or the transit permit.

**treatment.** Chemical or physical procedure used to kill pests; fumigation, cold treatment, hot water dip, application of fungicide, vapor heat.

**triticale.** Intergeneric hybrid between wheat and rye sometimes used as a generic name.

**tritordeum.** Intergeneric hybrids between wheat and barley sometimes used as a generic name.

**unprocessed seed.** Seed that has **not** been subjected to any degree of alteration beyond harvesting.

**variety.** Subdivision of a kind which is characterized by growth, fruit, seed, or other characteristics by which it can be differentiated from other sorts of the same kind, e.g, Marquis wheat, Kennebec Irish potato, Winesap apple, and Kentucky wonder pole bean.

**West Indies.** Principal countries of: Anguilla, Antigua and Barbuda, Bahamas, Barbados, Cayman Islands, Cuba, Dominica, Dominican Republic, Grenada, Guadeloupe (and St. Barthelemy), Haiti, Jamaica, Martinique, Montserrat, St. Eustatius, St. Kitts and Nevis, St. Lucia, St. Martin, St. Vincent and the Grenadines, Turks and Caicos Islands, and the British Virgin Islands.
